Qualifiers

GC/MS VOA

| Qualifier | Qualifier Description |
|-----------|--|
| * | RPD of the LCS and LCSD exceeds the control limits |
| * | ISTD response or retention time outside acceptable limits |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |
| F2 | MS/MSD RPD exceeds control limits |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

GC Semi VOA

| Qualifier | Qualifier Description |
|-----------|---|
| B | Compound was found in the blank and sample. |
| D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| X | Surrogate is outside control limits |

Metals

| Qualifier | Qualifier Description |
|-----------|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| B | Compound was found in the blank and sample. |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |
| F2 | MS/MSD RPD exceeds control limits |
| F4 | MS/MSD RPD exceeds control limits due to sample size difference. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| α | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

Comments

The 8081A results will be reported in a second report.

Receipt

The samples were received on 7/16/2019 1:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.5° C and 5.0° C.

GC/MS VOA

Method(s) 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch analytical batch 720-269532 recovered outside control limits for the following analytes: 2-Butanone (MEK).

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 720-269513 and 720-269513 and analytical batch 720-269548 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 720-269816 and analytical batch 720-269799 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8260B: Internal standard (ISTD) response for the following samples were outside control limits: B-3, 1' (720-94040-34), (720-94040-A-34-G MS) and (720-94040-A-34-H MSD). The sample(s) was re-extracted and/or re-analyzed with concurring results, and the second set of data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: The following samples required a dilution due to the nature of the sample matrix: B-7, 1' (720-94040-46). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8015B: The following samples required a dilution due to the nature of the sample matrix: B-3, 1' (720-94040-34) and B-4, 1' (720-94040-37). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8015B: The following samples required a dilution due to the nature of the sample matrix: A-5, 1' (720-94040-13), A-6, 1' (720-94040-16) and A-8, 1' (720-94040-22). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8015B: The method blank for preparation batch 720-269537 and analytical batch 720-269649 contained Diesel Range Organics [C10-C28] above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 720-269606 and analytical batch 720-269792 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010B: The post digestion spike % recovery for Barium associated with batch 720-269792 was outside of control limits. The following sample is impacted: (720-94040-A-31-F PDS).

Case Narrative

Client: ATC Group Services LLC.
Project/Site: Sunset Development

Job ID: 720-94040-1

Job ID: 720-94040-1 (Continued)

Laboratory: Eurofins TestAmerica, Pleasanton (Continued)

Method(s) 6010B: The serial dilution performed for the following sample associated with batch 720-269792 was outside control limits for Barium, Cobalt, Chromium, Nickel and Vanadium: (720-94040-A-31-F SD).

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: B-2, 1' (720-94040-31). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The method blank for preparation batch 720-269525 and analytical batch 720-269837 contained Chromium above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 720-269525 and analytical batch 720-269837 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010B: The post digestion spike % recovery for Barium-134% associated with batch 720-269837 was outside of control limits. The following sample is impacted: (720-94040-A-1-D PDS ^4).

Method(s) 6010B: The serial dilution performed for the following sample associated with batch 720-269837 was outside control limits for Barium, Cobalt, Chromium, Nickel, and Vanadium: (720-94040-A-1-D SD ^20).

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23), A-9, 1' (720-94040-25), A-9, 3' (720-94040-26), B-1, 1' (720-94040-28), B-1, 3' (720-94040-29), (720-94040-A-1-B MS ^4), (720-94040-A-1-C MSD ^4), (720-94040-A-1-D PDS ^4) and (720-94040-A-1-D SD ^20). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: B-5, 1' (720-94040-40), B-5, 3' (720-94040-41), B-6, 1' (720-94040-43), B-6, 3' (720-94040-44), B-7, 1' (720-94040-46), B-7, 3' (720-94040-47), B-8, 1' (720-94040-49) and B-8, 3' (720-94040-50). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23), A-9, 1' (720-94040-25), A-9, 3' (720-94040-26), B-1, 1' (720-94040-28), B-1, 3' (720-94040-29), (720-94040-A-1-B MS), (720-94040-A-1-C MSD), (720-94040-A-1-D PDS) and (720-94040-A-1-D SD). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: B-2, 3' (720-94040-32), B-3, 1' (720-94040-34), B-3, 3' (720-94040-35), B-4, 1' (720-94040-37), B-4, 3' (720-94040-38), B-5, 1' (720-94040-40), B-5, 3' (720-94040-41), B-6, 1' (720-94040-43), B-6, 3' (720-94040-44), B-7, 1' (720-94040-46), B-7, 3' (720-94040-47), B-8, 1' (720-94040-49) and B-8, 3' (720-94040-50). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3546: 3546 8015B DRO: Due to the matrix, the following sample could not be concentrated to the final method required volume of 2 mL: B-3, 1' (720-94040-34), B-4, 1' (720-94040-37) and B-7, 1' (720-94040-46). The reporting limits (RLs) are elevated proportionately. The sample final volume was 5 mL.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: ATC Group Services LLC.
Project/Site: Sunset Development

Job ID: 720-94040-1

Laboratory: Eurofins TestAmerica, Pleasanton

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority | Program | EPA Region | Identification Number | Expiration Date |
|------------|---------------|------------|-----------------------|-----------------|
| California | State Program | 9 | 2496 | 01-31-20 |

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

| Analysis Method | Prep Method | Matrix | Analyte |

Job ID: 720-94040-2

Qualifiers

GC Semi VOA

| Qualifier | Qualifier Description |
|-----------|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |
| F2 | MS/MSD RPD exceeds control limits |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| p | The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported. |
| X | Surrogate is outside control limits |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| α | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

Comments

No additional comments.

Receipt

The samples were received on 7/16/2019 1:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.5° C and 5.0° C.

GC Semi VOA

Method(s) 8081A: The continuing calibration verification (CCV) associated with batch 286268 recovered above the upper control limit for Toxaphene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23) and (CCV 180-286268/2).

Method(s) 8081A: The following samples were diluted due to the nature of the sample matrix: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23), A-9, 1' (720-94040-25), A-9, 3' (720-94040-26), B-1, 1' (720-94040-28), B-1, 3' (720-94040-29), B-2, 1' (720-94040-31), B-2, 3' (720-94040-32), B-3, 1' (720-94040-34), B-3, 3' (720-94040-35), B-4, 1' (720-94040-37), B-4, 3' (720-94040-38), B-5, 1' (720-94040-40), B-5, 3' (720-94040-41), B-6, 1' (720-94040-43), B-6, 3' (720-94040-44), B-7, 1' (720-94040-46), B-7, 3' (720-94040-47), B-8, 1' (720-94040-49), B-8, 3' (720-94040-50), (720-94040-B-16-A MS), (720-94040-B-16-B MSD), (720-94040-B-31-A MS) and (720-94040-B-31-B MSD). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Bishop Ranch 3A Proposed Hotel Site
APN 213-133-098
San Ramon, California

APPENDIX I

RESUMES

Michael McAlpin, P.G.

Project Geologist

Branch Location

- San Luis Obispo, California

Education

- Bachelor of Science, Geology, Central Michigan University, Mt. Pleasant, Michigan, August 2010

Professional Registrations/Certifications

- Professional Geologist, #9438, January 2017
- Qualified SWPPP Developer, #G09438, June 2017

ATC Start Date

- November 2018

Michael McAlpin has been working as an environmental consulting geologist for approximately eight years. He has worked for international, national, and regional environmental consulting firms. Mr. McAlpin has conducted extensive environmental site assessment and remediation in various environmental settings. Mr. McAlpin has experience collecting environmental samples of various media. He has completed work for clients in varying sectors, including Fortune 500 listed companies. Mr. McAlpin has experience generating technical work plans, remedial action plans, soil management plans, groundwater monitoring plans, spill prevention plans, stormwater management plans, reports of findings, and real estate due diligence documents.

Areas of Expertise

- Aboveground Storage Tank/Underground Storage Tank Management Services
- Construction Environmental Oversight
- Construction Monitoring Services
- Environmental Due Diligence
- Phase I and II Site Assessment Services
- Remediation Services
- Stormwater Pollution Prevention Plan Services/Permits/Compliance
- Spill Prevention Services/Plans

Project Experience

Refining & Chemicals

Chevron, Guadalupe Restoration Project – Guadalupe, California

Geologist/Oversight: The project site was a former oil field situated in a coastal aeolian dune environment. Historically, due to the viscosity of the formation oil, a kerosene weight oil (a.k.a. diluent) was transported through the lease via pipelines, and used to cut the produced formation oil. The diluent lines leaked, extensively impacting soil and groundwater. Sumps, associated with well drilling, production, and completion activities, also exist at the project site. The project site contains habitat for listed flora and fauna as well as historical culturally significant artifacts.

Chevron, San Luis Obispo Tank Farm – San Luis Obispo, California

Geologist/Oversight: The project was a former oil tank farm. Tanks at the project site were constructed of wood or earthen material, had floating ceilings, and often contained parts water and various weights of oil. Lightning struck the project site, which started a fire that burned for several days. The fire caused the tanks' contents to boil over and extensively impact soil and groundwater. The project site contains habitat for listed flora and fauna as well as historical culturally significant artifacts.

Chevron, Station 2-22 – Taft, California

Geologist: The project site is an oil production facility within an active oilfield. The facility formerly used thermal units for production and transmission enhancement. The thermal units used a PCB based oil to operate. Unit(s) at the facility leaked or released the PCB fluid impacting the underlying soil.

Project Experience

Pipelines & Terminals

Chevron, Huron Pipeline Removal – Huron, California

Geologist/Oversight: The project was located within active agricultural land. Construction methodologies were used to remove approximately four miles of buried former gas transmission lines.

Education

California Polytechnic State University, Health Service Building UST Removal – San Luis Obispo, California

Geologist: The project site was located on an active university campus. During construction activities a reportedly removed UST associated with an emergency generator was identified. The underlying soil was assessed, contents of the UST were classified, the UST was inspected, made inert, removed and disposed of per the local CUPA agency.

Government

Land Trust for Santa Barbara County, Phase I Environmental Site Assessments – Los Alamos, California

Assessor: The project included multiple properties utilized for ranch land. Phase I ESAs were to be completed prior to the Land Trust completing the purchasing transactions.

San Luis Obispo County Environmental Health, Cayucos Water Tank NOA Survey – Cayucos, California

Geologist: The project site was located within the Coastal Ranges of California. The County of San Luis Obispo required assessment of naturally occurring asbestos within the area of a current water storage tank prior to commencing construction activities associated with construction two new water storage tanks.

Real Estate

Accuracy, Stormwater Management and Spill Prevention Plan Development – Nationwide

Project Manager: Conduct facility visits of transportation based facilities and determine appropriate stormwater management and spill prevention plans required for each facility. Upon determination, complete stormwater discharge applications and permitting process with local agencies in addition to plan development.

ConocoPhillips, Real Estate Due Diligence – California

Assessor: Conduct historical document review and determine compliance status of active retail petroleum service stations throughout California.

Retail Petroleum

Wortmann Oil, Station #8 – Los Angeles, California

Project Manager: The project site is an active retail petroleum service station. Onsite impacts to soil and groundwater are associated with a former leaking UST(s). Impacts to groundwater have migrated downgradient and offsite. Currently quarterly groundwater monitoring is conducted as well as multi-phase extraction events.

Todd Stanford, REHS, CEM

Principal Scientist

Branch Location

- Los Angeles, California

Education

- MS, Environmental Health, California State University, Northridge, 1991
- BS, Environmental & Occupational Health, California State University, Northridge

Professional Registrations/Certifications

- Registered Environmental Health Specialist (REHS), CA, #6183, 1991
- Certified Environmental Manager, NV, #1814, 2002
- California Air Resources Board Accredited Greenhouse Gas Emissions Lead Verifier (H-18-147)
- California Air Resources Board Accredited Oil & Gas Systems Process Specialist (H-18-147)

Training and Certifications

- CARB GHG Emissions Verifier Training
- CARB Oil & Gas Sector Specialty Training
- Project Manager Training
- Total Quality Management Training
- 40-Hour HAZWOPER Training and Annual 8-Hour Refresher Training
- Supervisory OSHA Health and Safety Training
- CPR and First Aid Training

Professional Affiliations

- Society for Risk Analysis
- National Environmental Health Association
- Sustainable Remediation Forum

ATC Hire Date

- 10/2016

Todd Stanford has more than 30 years of experience in site assessment, soil and groundwater remediation, pharmacology, risk assessment, occupational health and safety, and air toxics. His qualifications include extensive experience planning, directing, and completing environmental site assessments, designing remedial projects for soil and groundwater, performing human and ecological risk assessments, and evaluating the fate and transport of chemicals in soil, groundwater, and air. His experience also includes environmental, health, and safety management program development, multi-media environmental, health, and safety compliance auditing, risk management planning, solid waste management, and construction and redevelopment of environmentally impacted properties. Mr. Stanford has served on the Scientific Advisory Board for California AB 2588 and the Private Site Management Advisory Committee for AB 1876.

During Todd's career, his project management experience has been applied to capital construction projects, underground storage tank facilities, chemical production and bulk storage facilities, manufactured gas plant sites, aerospace and industrial manufacturing facilities, power generation and distribution facilities, and State and Federal Superfund sites. His expertise also has been called upon in support of legal issues involving fate and transport and human health effects resulting from exposures to toxic chemicals.

Project Experience

Environmental Program Management

Los Angeles County Metropolitan Transportation Authority (Metro), Environmental, Engineering Services (Contracts EN073 and EN076) – Multiple Locations, Los Angeles County, California

Program Manager: From 2005 through 2016, Mr. Stanford served as the Project Director for a multi-task environmental engineering contract with Metro. This contract covered environmental engineering, energy efficiency, and sustainability services for a variety of facilities including bus and rail maintenance divisions, existing and planned dedicated bus and Light Rail alignments, and various capital programs and projects. Environmental engineering services provided to Metro include geotechnical evaluation of new facilities and proposed facility improvements, underground and aboveground storage tank inspections and compliance program development for 22 operating bus and rail facilities, and stormwater management program development and implementation at 30 industrial facilities. Capital construction program support services provided under these contracts included environmental due diligence associated with the acquisition of properties for expansion of bus, light rail, heavy rail and subway services; preparation and review of environmental assessment documents; preparation and review of pilot testing reports for soil vapor, groundwater extraction, and construction dewatering; development of construction mitigation measures for vapor intrusion control; preparation and review of Remedial Action Plans, engineering design drawings and construction specifications; development, review, and implementation of construction stormwater plans, community air monitoring plans, soil and groundwater management plans, and soil reuse criteria for various capital improvement projects including the Metro Orange Line, Metro Gold Line East Extension, Crenshaw/LAX and Exposition Light Rail Lines, Union Division Bus Maintenance Facility, and Taylor Yard Joint Development Project. Provided field verification and contractor oversight during various phases of construction to ensure compliance with written programs, policies, specifications, and design criteria; applicable waste management and discharge permit requirements; noise and vibration monitoring and mitigation measures; and community dust and contaminant action levels.

Various Public Agencies, On-Call Environmental Services – Southern California

Project Manager: Since 1997, Mr. Stanford has provide program management leadership for on-call environmental contracts with a variety of public agencies in Southern California. Since 1997, these agencies have included the Cities of Anaheim, Ontario, Riverside, Brea, and Burbank; the County Sanitation Districts of Los Angeles County, the Los Angeles County Department of Public Works, Los Angeles County CEO Office, and the Los Angeles Community Design Center. Representative project activities include environmental due diligence associated with the acquisition of real property and rights-of-way; environmental site assessment of soil and groundwater impacts; asbestos, lead-based paint, and hazardous materials evaluations; solid and liquid waste characterization, management, and disposal; preparation of Integrated Pest Management Plans; landfill post-closure monitoring and reporting; development of remedial alternatives and project development cost analyses; and preparation of engineering design drawings and specifications for capital construction projects with impacted soil and groundwater.

Honolulu Harbor Working Group, Iwilei District Participating Parties –Honolulu, Hawaii

Project Manager: Oversaw a multi-party PRP group for a 0.5 square mile area that is impacted by petroleum hydrocarbons in soil and groundwater and methane gas in the subsurface. Developed a conceptual site model of fate, transport, and human and ecological exposure pathways, calculated health-based screening levels for chemicals of potential concern, and developed a comprehensive database and GIS application that provided focus to ongoing assessment and interim remedial activities. Also, interfaced with State of Hawaii and USEPA regulators and developed vapor migration and vapor intrusion screening algorithms to evaluate potential impacts to indoor and outdoor air and prioritize parcels for active mitigation, institution of land use covenants, and application of administrative controls.

Multi-Media Compliance Auditing and EHS Compliance

Port of Long Beach, Maintenance Facility & Operations, Environmental Compliance Audit – Long Beach, California

Lead Auditor: Led an environmental compliance audit of multiple Port of Long Beach operations which focused on review and determination of compliance status of various operations relative to applicable Federal, State, and local air regulations. The audit focused on air quality, hazardous materials, hazardous waste, aboveground and underground storage tanks, stormwater, and wastewater. The audit also evaluated the status of existing formal environmental health programs, including written programs, policies, span of control, and definitions of personnel roles and responsibilities.

California Institute of Technology, Jet Propulsion Laboratories, Multi-Media Compliance Auditing – Pasadena, California

Project Director and Lead Auditor: Oversaw a series of multi-media assessments and audits of educational and research oriented facilities. Provided environmental compliance auditing services as related to hazardous waste management, above-ground and underground storage tank management, business emergency planning, air emissions and Title V permit compliance, asbestos, lead-based paint, and PCBs management, California Accidental Release Program (CalARP) Risk Management Planning, Greenhouse Gas emissions reporting and verification, and related environmental compliance programs.

Confidential Water District, EH&S Program Compliance Assessment – California

Lead Environmental Auditor: Managed a multi-disciplinary assessment of a public water utility's environmental, health, and safety programs. The environmental component of the assessment focused on CalARP, Clean Air Act/Air Quality Permit Compliance, Clean Water Act compliance, Toxic Substances Control Act (TSCA) compliance, Hazard Communication, Hazardous Materials and Hazardous Waste Management, Spill Prevention Control and Countermeasure Planning, Stormwater Pollution Prevention and Monitoring Plans, and above-ground and underground storage tank programs. The assessment covered facilities constructed and operated by the utility including maintenance activities, two (2) water treatment plants, a desalination plant, two (2) active groundwater well fields and a water blending facility. Completed an organizational management assessment that considered several staffing and placement of EH&S functions within the organization as related to comparable utilities of similar size and operations. The organizational management assessment provided recommendations on EH&S staffing, suggested management and reporting structures, and management systems development.

Biomass and Fossil Fuel Power Plants, CalARP and Process Safety Management Audits – Multiple Locations, California and Nevada

Lead Auditor: Completed focused environmental and safety compliance audits relative to (CalARP)/Federal Risk Management Program and CalOSHA Process Safety Management (PSM) audits of several biomass and fossil fuel power plants in California and Nevada. The focus of the audits related to processes involving the storage and use of anhydrous and aqueous ammonia subject to the requirements of CalARP/PSM and federal Risk Management Plan (RMP) programs. Audit activities included a detailed review of covered processes, accident history, prevention program, process safety information, update of Process Hazard

Analyses, offsite consequence analysis, operating and training procedures, mechanical integrity program, management of change, and employee participation and incident investigation programs.

CalPeak Power, Risk Management Plan and Process Safety Management Auditing – Multiple Locations

Lead Auditor: Supported five (5) electrical power generating facilities that utilize aqueous ammonia to control emissions of nitrogen oxides. The audit program elements included detailed reviews of covered processes, accident history, prevention programs, process safety information, update of Process Hazard Analyses, offsite consequence analysis, operating and training procedures, mechanical integrity programs, management of change, and employee participation and incident investigation programs.

Precision Specialty Metals, Environmental Compliance Support – Los Angeles, California

Environmental Compliance Manager: Developed a comprehensive, multi-media environmental compliance program involving hazardous waste profiling, manifesting, and tracking; industrial wastewater treatment system monitoring and reporting; air permitting and related compliance activities (including Title V and RECLAIM programs); EPCRA reporting; RMPP compliance; and Stormwater Pollution Prevention Planning, implementation, and reporting. Interfaced with various regulatory agencies including the State Board of Equalization, Air Pollution Control Districts, Sanitation and Industrial Wastewater Discharge agencies, USEPA, and Regional Water Quality Control Boards. Provided ongoing technical support including identification of hazardous waste source reduction alternatives and general facility compliance with community right-to-know regulations.

Danaher Corporation, Environmental Health and Safety Compliance Audits – California and Arizona

Lead Auditor: Performed multi-media environmental health and safety compliance audits of four (4) aerospace and manufacturing facilities in support of corporate auditing practices for two different operating divisions within Danaher. Auditing services included focus on hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, Permit by Rule/Tiered Permitting, SARA Title III and EPCRA, OSHA, DOT, and TSCA. Provided supplemental consulting services and assisted in the development of inventory management and reporting tools and in the preparation of electronic report filings under EPCRA.

Project Cardinal, EH&S Compliance Auditing – Western and Central US

Lead Auditor: Managed multi-media environmental health and safety compliance audits of aerospace and industrial manufacturing facilities located in California, Arizona, Nevada, and Florida. The compliance evaluations were performed subsequent to various acquisitions by a confidential parent company. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA. Observed deficiencies were recorded and reported to USEPA under provisions of the EPA's Incentives for Self-Policing: Discovery, Disclosure, Correction and Prevention of Violations Policy, 65 Fed. Reg 19618.

Confidential Client, Multi-Media Compliance Audit – Los Angeles, California

Lead Auditor: Managed several comprehensive multi-media compliance audit of a company that is engaged in maintenance and leasing of corporate aircraft, as a component of pre-merger due diligence. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA.

Kirkland & Ellis, M&A Environmental Auditing – Western and Central US

Project Manager: Performed limited environmental compliance audits of several food production and distribution facilities located in California and Texas. The environmental compliance evaluations were performed as a component of pre-acquisition due diligence. Provided environmental compliance auditing services as related to air emissions and permitting, underground storage tanks, spill prevention and control, ozone depleting substances, Risk Management Planning, SARA Title III and EPCRA, and Process Safety Management.

Nixon Peabody, M&A Environmental Auditing – Western US

Project Manager: Managed several comprehensive multi-media compliance audits of industrial manufacturing facilities located in the Western US. Compliance evaluations were performed subsequent to various acquisitions by a confidential parent company. Provided environmental compliance auditing services as related to hazardous and solid waste management, water and wastewater discharges, chemical management, air emissions and permitting, underground storage tanks, spill prevention and control, SARA Title III and EPCRA, OSHA, DOT, and TSCA

Metal Finishing Companies, Environmental Health and Safety Consulting – Various Locations, California

Project Manager: Managed environmental and health & safety compliance issues for a number of metal finishing companies operating in Southern California. Typical consulting services included evaluating exposures to personnel working near open

process tanks containing phosphoric, nitric, and sulfuric acids, nickel, tin, copper, and hexavalent chromium; general and specific requirements for air emissions from degreasing solvents and air emissions from anodizing and etching, and electro and electroless plating of nickel, chromium, copper, tin, silver, and gold. Reviewed source testing results, established emissions estimates based on normalized facility-specific indices, conducted screening level risk evaluations, assisted in optimizing wastewater treatment system efficiency, identified source reduction alternatives, and provided training to facility personnel in the areas of environmental compliance and worker and community right to know regulations. Also, developed occupational safety and training programs for eye and face protection, hearing conservation, confined space identification and permitting, lockout/tagout, foot protection, respiratory protection, and operation of industrial trucks.

Russell Standard, Prepare and Submit the 2016 TSCA Chemical Data Reporting Rule Form U – Eight Facilities located in Ohio, Virginia, Pennsylvania, Maryland, North Carolina

Project Role: Served as the Principal consultant leading the preparation and submittal of the 2016 TSCA Chemical Data Reporting (CDR) Rule Form U to the USEPA via the EPA's Central Data Exchange (CDX) e-CDRweb tool. The scope of work included:

- Facilitation of a kick-off meeting to review the scope, schedule, budget, safety requirements and deliverables,
- Review of TSCA inventory-listed chemical substances manufactured (including imported) at the site for commercial purposes with a production volume of 2,500 lbs or 25,000 lbs or greater at the site during the principal reporting year (i.e., calendar year 2015),
- Review of company, site identification, confidential business, processing and use information required for reporting on the Form U,
- Data entry required in the Form U via the EPA CDX e-CDRweb tool,
- Completion of a draft Form U for review and comment by Russell Standard for review and comment,
- After approval by Russell Standard, submission of the Form U electronically via the EPA CDX e-CDRweb.

Vertex Energy, Prepare and Submit the 2016 TSCA Chemical Data Reporting Rule Form U – Fallon, Nevada

Project Role: Served as the Principal consultant leading the preparation and submittal of the 2016 Toxic Substances Control Act (TSCA) Chemical Data Reporting (CDR) Rule Form U to the USEPA via the EPA's Central Data Exchange (CDX) e-CDRweb tool. The scope of work included:

- Facilitation of a kick-off meeting to review the scope, schedule, budget, safety requirements and deliverables,
- Review of TSCA inventory-listed chemical substances manufactured (including imported) at the site for commercial purposes with a production volume of 2,500 lbs or 25,000 lbs or greater at the site during the principal reporting year (i.e., calendar year 2015),
- Review of company, site identification, confidential business, processing and use information required for reporting on the Form U,
- Data entry required in the Form U via the EPA CDX e-CDRweb tool,
- Completion of a draft Form U for review and comment by Vertex Energy for review and comment, and
- After approval by Vertex Energy, submission of the Form U electronically via the EPA CDX e-CDRweb.

Human and Ecological Risk Assessment

Confidential Clients, Proposition 65 Exposure Assessment – Various Locations, California

Project Manager: Evaluated 100 consumer products and over 20 chemicals listed by the State of California as carcinogens, developmental or reproductive toxicants. Listed chemicals evaluated included acrylamide, volatile organic compounds, dioxins/furans, polynuclear aromatic hydrocarbons, metals, and phthalates. The evaluations were performed for a wide range of consumer products including paper products, toiletries, and durable goods. The evaluations ranged from quantitative exposure assessments utilizing default exposure parameters for typical use scenarios to detailed exposure assessment sampling and analysis to establishing exposure point concentration estimates based on gravimetric, bulk, and wipe sampling protocols. The evaluations included a three phase review process which included identification of listed chemicals in the supply or manufacturing chain, a qualitative evaluation of exposure potential based on the finished product composition, and a final quantitative assessment of exposure under typical product use conditions. The results of the analysis were utilized to inform the manufacturer or supplier on potential Proposition 65 notification requirements, to assist in the identification or alternative product formulations that would not result in Proposition 65 notifications, and to establish protocols for further refinement of exposure parameters that contribute most-significantly to potential consumer exposures and risks.

Various Industrial Companies, Vapor Intrusion Assessment, Mitigation, and Health Risk Assessment Services – Western United States

Technical Lead: Completed human health risk assessments for a variety of petroleum, chlorinated solvent, heavy metal, dioxin/furan, and radionuclide impacted sites and facilities throughout the continental United States. Risk assessment clients include, among others, ConocoPhillips, ExxonMobil, Farmer Brothers, Chevron, Unocal, Simpson Paper Company, Lockheed Martin Corporation, Coastal Corporation, Rohr Industries, Signet Armorlite, BP/Arco, Gatron Industries, Home Depot, BNSF Railroad, Kinder-Morgan Energy Partners, State of Hawaii Department of Transportation, Montrose Chemical Company, Weyerhaeuser, Kimberly Clark, Chromalloy, and Jorgensen Steel. The health risk assessments have ranged in complexity from single exposure pathway analyses to complex multi-media exposure pathways involving multiple chemicals. The risk assessment results have been used in internal risk-management decision making and prioritization, litigation support, and as regulatory compliance tools. Assessed and refined several vapor intrusion evaluation methodologies and the integration of risk management measures for more than 28 years. Performed field pilot testing of subslab ventilation and subslab depressurization systems and prepared engineering design specifications for soil vapor barriers, subslab ventilation and depressurization systems, and supervised the installation of operation of engineered mitigation systems. Assessments have been approved by agencies including the California Department of Toxic Substances Control, California Air Resources Board, Hawaii Department of Health, Nevada Department of Environmental Protection, Arizona Department of Environmental Quality, the United States Environmental Protection Agency, Lahontan, Central Coast, Los Angeles, Santa Ana, San Diego, Central Valley, and San Francisco RWQCBs.

Confidential School Districts, School Site Characterization, Risk Assessment and Remedial Action Planning – Southern California

Risk Assessment Manager: Supervised the preparation of preliminary endangerment assessments and associated remedial action planning for several proposed and existing school sites for several school districts in Southern California. Chemicals of potential concern evaluated included volatile organic compounds, heavy metals, PCBs, chlorinated herbicides and pesticides, petroleum hydrocarbons, and semi-volatile organic compounds in soil, groundwater, and soil vapor. Performed Human Health Risk Assessments to identify specific constituents and exposure pathways which warranted implementation of remedial action plans and removal action workplans and provided oversight and management during implementation of remedial and removal actions pertaining to soil and groundwater. Provided post-construction monitoring and verification to ensure that the potential risks to current and future building occupants and students were consistent with project-specific objectives.

Molycorp Minerals, Mountain Pass Mine Human Health Risk Assessment (HHRA) – Mountain Pass, California

Risk Assessment Manager: Supervised the Human Health Risk Assessment (HHRA) component of the Corrective Action and Closure Plan for the Mountain Pass Mine and Mill Site located in San Bernardino County, California. The HHRA included quantitative evaluation of potential human health risks and qualitative evaluation of potential ecological risks associated with current site conditions for lanthanides, actinides, and radionuclides (e.g., radium, thorium, and uranium decay series). Health-based cleanup goals for soil were also derived for lanthanides and actinides. For radionuclides, cleanup goals were developed based on surface radiation exposure rates for specific areas. The HHRA and cleanup goals were used to identify additional geographic areas that warrant additional investigation and/or mitigation and established the basis for determining that post-remediation concentrations met the site risk management objectives.

Riverside Agricultural Park, Human Health Risk Assessment – Riverside, California

Risk Assessment Manager: Managed the post-remediation HHRA pursuant to the California Land Reuse and Revitalization Act Agreement. The Site encompasses approximately 62 acres of undeveloped land that was first developed as a sewage treatment plant in 1942. The sewage treatment plant was decommissioned in 1965. However, environmental assessment activities identified the presence of PCBs, semi-volatile organic compounds, volatile organic compounds, pesticides, herbicides, dioxins/furans, and metals in soil. Implemented a remedial action plan which included the excavation and off-site disposal of approximately 174,000 tons of impacted soil. Prepared dust mitigation and air monitoring plans for remedial excavation activities to ensure that emissions during construction did not pose a significant risk to the surrounding residential community. DTSC subsequently approved the remedial action completion report and HHRA and issued a certificate of completion in 2014.

Carroll Hall Shelby Trust, Human Health Risk Assessment – Gardena, California

Risk Assessment Manager: Managed the HHRA in order to further refine the chemicals of potential concern, establish health-based soil and groundwater remediation objectives, and to evaluate vapor intrusion conditions resulting from remedial activities implemented during pilot testing. Potential exposures considered in the HHRA included direct contact with soil and vapor intrusion to existing or future site structures. Supplemental monitoring of soil gas and indoor air was performed during the pilot remediation testing period to confirm that mitigation measures were adequate to protect current building occupants from exposures to chlorinated VOCs emanating from the subsurface.

Los Angeles County Department of Public Works, Oxford Basin, Human Health Risk Assessment – Marina Del Rey, California

Risk Assessment Manager: Managed the HHRA in support of proposed improvements to a storm retention basin. Previous environmental investigations identified the presence of heavy metals, PCBs, chlorinated herbicides and pesticides, petroleum hydrocarbons, and semi-volatile organic compounds in basin sediments and surrounding soil. Proposed site enhancement activities include construction of new features to increase its storage capacity and improve the general appearance and recreational use of this feature. The results of the HHRA were used to support the future site development activities and to identify specific risk management measures that would be used to reduce potential exposures and risks to future site workers and recreational users.

Pacific Gas and Electric Company, Hunters Point Power Plant Dismantlement Contract, Human Health Risk Assessment – San Francisco, California

Risk Assessment Manager: Managed the HHRA component of the Remedial Investigation/Feasibility Study (RI/FS) activities. Activities performed in support of the RI/FS activities involved development of general data quality objectives for soil, groundwater, sediment and soil vapor to facilitate the application of field data in human health and screening ecological risk assessments. Developed a Conceptual Site Risk model for the site based on the anticipated future unrestricted use of the property. Specific elements of the HHRA completed as a component of this project include statistical data evaluation for determining background concentrations of metals and asbestos in soil, identification of chemicals of potential concern for inclusion in the quantitative HHRA, quantification of plausible human exposure pathways involving soil, soil vapor (vapor intrusion), and groundwater, identification of Chemicals of Concern (COCs) that influence the site-wide risk estimates, and determination of health-based screening levels for COCs in soil, groundwater, and soil vapor. The health-based screening levels were used in conjunction with the statistically-derived background concentrations to establish the remediation goals that served as the basis for evaluation potential response, mitigation, and engineering control alternatives.

Chevron/Unocal and ExxonMobil Petroleum Tank Farms and Operating Fields, Site Assessment, Fate and Transport Modeling, Health Risk Evaluation, and Remedial Action Planning and Implementation – Various Locations

Principal Scientist: Conducted environmental site assessment and establishment of remedial action goals for former bulk storage facilities, tank farms, production fields, and crude-oil gathering and distribution lines. Coordinated acquisition of sampling data regimen and laboratory analyses for soil, groundwater, and soil vapor; performed remedial feasibility testing; and prepared and implemented remedial action plans for active and idle properties. Assessment and remediation activities were performed to both support proposed divestment and redevelopment activities and in defense of third-party suits. The results of fate and transport modeling and human health risk assessments were used to establish land use-specific remedial goals for COPCs in soil, soil vapor, and groundwater. Assessment and remediation activities were performed under the jurisdiction of variety of regulatory agencies including the Lahontan, Central Coast, Los Angeles, Santa Ana, San Diego, Central Valley, and San Francisco RWQCBs, Department of Toxic Substances Control, and California Air Resources Board.

Former Railroad Facility, Health Risk Evaluation and Remedial Action Planning – San Jose, California

Risk Assessment Manager: Managed all aspects of a human health risk assessment for an approximately 13 acre former rail facility impacted by surficial and subsurface metals, polynuclear aromatic hydrocarbons (PAHs), pesticides/herbicides, and volatile organic compounds. The health risk assessment considered the redevelopment of the property for residential use. Consequently, performed an evaluation of potential risks under a proposed future residential land-use scenario under baseline (i.e., pre-remediation) conditions for direct exposure and vapor diffusion exposure pathways. The health risk assessment also included an evaluation of the potential migration of methane gas and volatile organic compounds in soil vapor from two adjacent landfills. Developed health-based remediation goals for metals, PAHs, and pesticides/herbicides in soil to protect future site residents from direct contact with these constituents. The results of the vapor diffusion analysis were used to establish engineering controls to prevent the migration of methane gas and VOCs from the adjacent landfills to the subject property and from the subsurface to indoor air within the residences. Following approval of the health-risk assessment and regulatory concurrence with the remediation goals, the remedy was implemented and a no further action determination was obtained and the property was redeveloped for residential use.

Pacific Gas and Electric Company, Humboldt Bay Generating Station (HBGS) Demolition and Abatement Project – California

Principal Scientist: Completed a screening level risk assessment for potential construction-related exposures associated with the fast-track demolition and abatement project. The results of the human health risk assessment demonstrated that residual chemicals in soil do not pose a significant threat to construction workers or future site workers and that no additional risk management measures or remediation is warranted.

Lockheed Martin Corporation, Former Industrial Light Metals Facility – Torrance, California

Principal Scientist: Provided risk assessment services for chlorinated and aromatic hydrocarbons in soil and groundwater at a former aerospace facility. Risk assessment services included evaluation of vapor intrusion into indoor air under current and anticipated future site conditions and hypothetical future groundwater use scenarios. Analyzed the fate and transport of chlorinated solvents in soil to determine whether residual soil impacts represent a potential source of impact to groundwater. The results of the risk assessment have been used to support site development and use during remedial testing and remedy implementation. The results of the fate and transport analyses were used to justify closure of several solid waste management units associated with the facility.

Confidential Clients, Risk Assessment and Risk Management Planning – Multiple Locations, California and Nevada

Principal Scientist: Prepared documentation related to potential releases of anhydrous and aqueous ammonia and hydrofluoric acid from onsite storage and NOx control (Selective Catalytic Reduction) systems for several proposed and existing power generation facilities and manufacturing facilities. Lead process hazard reviews and identified potential mitigation measures for deployment at facilities in conjunction with site selection and preliminary engineering design of facilities. Performed offsite consequence analyses for facilities based on mitigated and unmitigated alternatives in accordance with Federal RMP and CalARP requirements.

City of Monterey, Monterey Swim Gym Facility Human Health Risk Assessment – Monterey, California

Project Manager: Oversaw the human health risk assessment portion of the Monterey Swim Gym Facility and assisted in comprehensive site assessment and remedial design for a former manufactured gas plant site. Specific project responsibilities included identifying potential constituents of concern related to former facility operations, designing a statistical sampling plan, completing a human health risks assessment involving current and potential future exposures related to property development, and establishing remedial design objectives. The remedial design objectives were used to establish the geographic limits of the remedial response in consideration of the intended site development and to support the beneficial reuse of impacted soil.

Ramco, Mace Ranch Development – Davis, California

Project Role: Supervised tasks for a former pesticide and fertilizer bulk facility located in an agricultural area of Central California. Historical dumping of bulk pesticides including ethylene dibromide (EDB), dichloropropane (DCP), and dibromochloropropane (DBCP) into an unlined wash basin created a plume of pesticides in soil and perched groundwater that threatened a nearby municipal water well. Remedial investigations focused on establishing health based remedial goals for soil and groundwater that are protective of the underlying utilized aquifer and allow for residential development of the adjacent property. The selected remedial alternative included both limited remedial excavation of impacted soil and groundwater plume control.

Confidential Client, Risk Characterization and Management – Chubut Province, Argentina

Risk Assessment Manager: Evaluated potential risks to human health of mine site workers and nearby residents resulting from mine site operation and potential catastrophic event scenarios. Activities evaluated as a component of this project included transport of hazardous substances during mine operation, plant operations and process-related activities, impoundment and sterile rock pile facilities, and onsite use of hazardous substances. Also, identified risk management measures for the activities associated with the greatest risk probability and consequence.

Former Cannery, Remedial Investigation and Mitigation – Honolulu, Hawaii

Risk Assessment Manager: Performed a comprehensive evaluation of the presence and distribution of multiple chemicals in soil and groundwater beneath a former cannery. Chemicals evaluated include substituted benzene compounds and polynuclear aromatic hydrocarbons. Conducted an analysis of the potential fate and transport potential of chemicals in groundwater and evaluated potential onsite and offsite health risks associated with direct contact and inhalation of chemicals during and after site development. The results of the health-risk assessment were used to establish vapor control criteria for volatile compounds and methane gas and to secure approval for site redevelopment for commercial use.

Unocal Corporation, Emissions Inventory Planning, Reporting, Fugitive Emissions Monitoring, and Health Risk Assessments – Santa Maria, California

Risk Assessment Manager: Conducted emissions quantifications for pressure distillates, crude towers, coker wet gas, overhead gas, tail gas treatment, straight run naphtha, crude heaters, crude and recovered oil storage tanks, and coker naphtha for emissions of benzene, ammonia, toluene, hydrogen sulfide, chlorine, zinc, xylenes, and C8 aromatics. Conducted source testing of sump vapor recovery units and obtained permits to operate facility equipment at various pump stations. Developed source testing and emissions quantifications methodologies and completed AB2588 health risk assessments for facility emissions.

City of Burbank Redevelopment Agency, B-1 Remediation Oversight – Burbank, California

Project Director: Assisted the City of Burbank in determining whether the Vapor Extraction System was operating in compliance with the Conditional Use Permit issued by the City. Activities performed include collection and analysis of verification samples of system air emissions, evaluate calibration of in-line VOC detectors and programmable logic controllers, and completion of weekly and quarterly health risk assessments based on facility emissions. Developed and maintained a webpage for the City of Burbank containing the results of verification samples, health risk evaluations, and vapor extraction system operational data.

Environmental Due Diligence

Union Bank, Environmental Due Diligence – Multiple Locations

Project Director: Managed Union Bank's environmental risk management and environmental due diligence activities related to secured loans and real estate used as collateral for loan securitization. Completed more than 200, Phase 1 Environmental Site Assessments and Transaction Screen Reports for Union Bank of California for locations throughout the continental United States. Also, completed environmental site assessments, removed underground storage tanks, developed remedial action plans, and installed and operated soil and groundwater remediation systems at a variety of industrial, commercial, and retail properties.

Combined Properties, Incorporated, Environmental Due Diligence, Assessment and Remediation – Multiple Locations, Southern California

Project Director: Directed environmental due diligence activities for acquisition and divestment of commercial properties. Managed all aspects of pre-acquisition environmental due diligence activities including preparing Phase I Environmental Site Assessment (ESA) documents, characterizing subsurface soil and groundwater conditions for petroleum hydrocarbons and hazardous substances, conducting geotechnical evaluations, completing asbestos and lead-based paint evaluations, designing, installing and operating remedial systems, and providing assistance on mitigation of subsurface and building hazards.

Related Companies of California, Environmental Due Diligence, Assessment and Remediation – Southern California

Project Director: Oversaw environmental due diligence activities for acquisition and divestment of residential and mixed-use properties. Responsible for all aspects of pre-acquisition environmental due diligence activities including preparing Phase I ESA documents, characterizing subsurface soil and groundwater conditions for petroleum hydrocarbons and hazardous substances, conducting geotechnical evaluations, completing asbestos and lead-based paint evaluations, designing, and providing assistance on mitigation of subsurface and building hazards.

First Republic Bank, Environmental Due Diligence – Southern California

Project Role: Managed First Republic Bank's environmental risk management and environmental due diligence activities related to secured loans and real estate used as collateral for loan securitization. Completed more a dozen Phase I ESAs and Transaction Screen Reports at various locations throughout Southern California.

Confidential Aerospace and Metal Finishing Locations, Environmental Compliance and Operational Liability Assessments – Southern California

Project Director: Performed environmental compliance and operational liability assessments for several aerospace finishing companies in Southern California. Due diligence activities included evaluation of facility environmental health and safety compliance programs, review of business environmental risks as related to limitations of existing wastewater and air discharge permits, and preparation of life-cycle environmental assessment and remediation costs for impacts to soil and groundwater resulting from historical facility operations. Deliverables prepared in support of these projects included detailed cash flow and probability-based life-cycle cost estimates for remedial action.

Dear Michael McAlpin,

Thank you for your request. We have searched our records and have no records that respond to your below request for:

6200 Bollinger Canyon Road
San Ramon

If you have any questions or concerns, please call or e-mail me.

Sincerely,

Magnolia Vinluan-Chan for
Rochelle Henderson

Good Afternoon:

We were forwarded a request for records from our Environmental Health division that you are looking for records for 6200 Bollinger Canyon Rd., San Ramon.

We have no records for this property. Our records go back to 1986, anything prior to this would be the jurisdiction of the local fire department.

For any future requests for haz mat or UST records, please use the request form for our division, which can also be found on our website, www.cchealth.org/hazmat.

Kind Regards,

Alex McMullen, Clerical Supervisor

Mike,

Thank you for your records request. Unfortunately we can not accept it because it is not our departmental form. I have added the correct form and ask that you do a separate form for each parcel you wish us to find information about. We apologize for the inconvenience and will gather the information as soon as we get the proper forms.

[External Email] This email originated from outside of the Atlas mail system. Please use caution when opening attachments.

Hello,

The site address 6200 Bollinger Canyon Rd is a currently empty lot. According to our Building division, there are a total of 4 parcels at this lot. Only parcel 213-133-086, on the corner of Bollinger Canyon and Camino Ramon, currently has the address assigned as such. The other parcels, 213-133-098, 213-133-099 and 213-133-100, currently have no address assigned. There was only one permit issued for the address in the time period specified for a "Mock Up" structure. This was in place for about a year and was there to test weathering of exterior finishes that are now installed at City Center. Attached is the building permit and application form.

Our Planning division has no responsive records since 2016 that relates to a Phase I ESA for requested APN 213-133-098-3. There is a Minor Subdivision file for this property (the future hotel site for City Center Phase 2) that was approved in 2018 which is a parcel map. If you have questions about this specific item, please contact Ryan Driscoll in the Planning division at rdriscoll@sanramon.ca.gov.

This completes your request.

Sincerely,

Jocelyn Kwong
Deputy City Clerk
City of San Ramon

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

RESOLUTION NO. 2016-073

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF SAN RAMON
AUTHORIZING THE MAYOR TO EXECUTE A GRANT DEED AND ALL OTHER
DOCUMENTS NECESSARY TO TRANSFER TITLE TO APN: 213-133-086 TO BR3A,
LP, A CALIFORNIA LIMITED PARTNERSHIP**

WHEREAS, on June 10, 2014 the City Council adopted Resolution 2014-062 authorizing the Mayor to execute a design build contract with Sunset Development Company for construction of a new City Hall building at 7000 Bollinger Canyon Road; and

WHEREAS, consideration under the contract was capped at \$15,004,306.62 which represents the combined value of (a) the promissory note owed City in connection with purchase in 2008 by Sunset of an approximately 7.6 acre parcel (APN: 213-133-086) and (b) the option price for which Sunset is entitled to reacquire on (APN: 213-133-086); and

WHEREAS, as provided in the construction contract and authorized by the City Council on July 14, 2015, a request for full reconveyance of the deed of trust securing the promissory note was recorded on July 16, 2015 reflecting the fact that ongoing construction costs had exceeded the \$7,285,000 amount owed under the promissory note; and

WHEREAS, construction of the City Hall has been completed and a certificate of occupancy issued; and

WHEREAS, Sunset has submitted the documentation required under sections 5.2.1 through 5.2.5 of Part 2 of the construction contract showing a total construction cost of \$15,341,260.00; and

WHEREAS, City is satisfied with the documentation provided by Sunset and desires to transfer title to APN: 213-133-086 as the final payment to Sunset in accord with section 5.2.5 of Part 2 of the construction contract.

NOW THEREFORE, BE IT RESOLVED that the Mayor is authorized and directed to execute a grant deed and all other documents necessary to transfer title to APN: 213-133-086 to BR3A, LP, a California Limited Partnership and the assignee of Sunset Development Company.

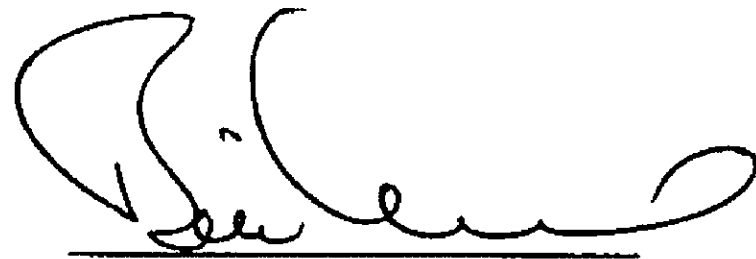

PASSED, APPROVED AND ADOPTED at the meeting of July 26, 2016 by the following votes:

AYES: *Cm. Hudson, O'Loane, Sachs, and Mayor Clarkson*

NOES:

**CITY OF SAN RAMON
REQUEST FOR COMMENTS**

DRC Meeting Date: No Meeting
Project Name: City Center Phase 2 Parcel Map
File Number(s): MS 17-910-002

Background

Originally, the City Center Project, including development located at 6200 Bollinger Canyon Road (APN: 213-133-086), was approved with conditions of approval on December 11, 2007 by the City Council with the adoption of Resolution No. 2007-207.

On November 20, 2014, the Zoning Administrator adopted Zoning Order No. 30-14 approving a Development Plan Amendment application (DPA 14-310-004) for site plan and development profile revisions including the relocation of the hotel and the consolidation of the residential units to the 6200 Bollinger Canyon Road property (BR-3A site).

Project Description

On December 29, 2017 the Applicant submitted project plans for a Minor Subdivision application (MS 17-910-002) for a Parcel Map to subdivide the existing 10.66 acre parcel (BR3A – APN: 213-133-086) into three (3) new parcels. The purpose of the application is to subdivide the property for financing purposes as the Property Owner prepares project plans for construction under the existing entitlements approved in 2007 and 2014 for the subject property. There is no change to the previously approved development entitlements for the subject property.

The subject property is within the City Center Mixed Use (CCMU) Zoning District. The development standards (including setbacks and Floor Area Ratio) for the CCMU Zoning District would not be revised or modified with this application. Additionally, Zoning Ordinance Table 2-7 establishes that the minimum lot size area, width, and depth standards are “determined through subdivision process”.

Please provide all comments and/or conditions of approval by **Friday, January 19, 2018.**

| Growth Management Plan—Measure “J” Compliance: In accordance with the City’s General Plan Growth Management Program, the Review Authority must find that upon approval of the project that it complies with each of the following identified performance standards for full urban services as outlined in the General Plan Growth Management Element. Please review the Performance Standards that are your agency’s responsibility and confirm compliance or identify conditions of approval to ensure compliance. | Does Not Meet | Meets |
|---|--------------------------|-------------------------------------|
| <u>Community Centers – Responsibility San Ramon Parks and Comm. Services</u> Performance Standard: The proposed project will not result in new Community Center demand that will change service levels or alter current standard to provide a minimum ratio of 1.2 square feet of Community Center space per 1,000 residents at General Plan build-out. | <input type="checkbox"/> | <input type="checkbox"/> |
| <u>Fire - Responsibility SRVFPD</u> Performance Standard: Prior to project approval, require written verification from the District that a 5-minute total response time can be maintained for 90 percent of emergency calls in urban and suburban areas and/or that there will be a fire station within 1.5 miles of all development. | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
| <u>Flood Control - Responsibility San Ramon Engineering Services</u> Performance Standard: Prior to project approval, applicants shall obtain written verification from the San Ramon Engineering Services Department stating that the new development will provide adequate storm drain facilities to accommodate 25-year storm events, or other at the discretion of the City Engineer. Runoff from the development shall not increase the 100-year peak flow in the City’s flood control channels and shall be substantially equal to pre-development conditions | <input type="checkbox"/> | <input type="checkbox"/> |
| <u>Libraries - Responsibility San Ramon Parks and Comm. Services</u> Performance Standard: The proposed project will not result in new library demand that will change service levels to alter current Standard to provide a minimum ratio of 0.5 square feet of library space per capita and 3 volumes per capita at General Plan build-out. | <input type="checkbox"/> | <input type="checkbox"/> |
| <u>Parks - Responsibility San Ramon Parks and Comm. Services</u> Performance Standard: Require new development projects to contribute their fair-share to meet park demand based on the City Subdivision Ordinance, Quimby Act and City park dedication requirements, to achieve a ratio of 6.5 acres of Public Park per 1,000 residents, with a goal to have park and recreation facilities within one-half mile of all residences at General Plan build-out. | <input type="checkbox"/> | <input type="checkbox"/> |
| <u>Police - Responsibility San Ramon Police Services</u> Performance Standard: Prior to project approval, require written verification from the San Ramon Police Department that a 3-5 minute response time for emergency calls and a 20-minute response for all other calls can be maintained 95 percent of the time. | <input type="checkbox"/> | <input type="checkbox"/> |
| <u>Sanitation Facilities - Responsibility CCCSD or DSRSD</u> Performance Standard: Prior to project approval, require written verification from the approved service provider that adequate sanitation facilities and services will be available to serve the project | <input type="checkbox"/> | <input type="checkbox"/> |
| <u>Schools - Responsibility SRVUSD</u> Performance Standard: Require new development to provide necessary land, finding and/or capital facilities for the school system, as determined by the San Ramon Valley Unified School District and applicable State law. | <input type="checkbox"/> | <input type="checkbox"/> |
| <u>Water - Responsibility DSRSD or EBMUD</u> Performance Standard: Prior to project approval, require written verification from the approved service provider that adequate water quality, quantity, and distribution will be available to serve the project. | <input type="checkbox"/> | <input type="checkbox"/> |

I have included comments on the next page.

If you have no comments on this project on behalf of your organization and acknowledge that the proposed project complies with the performance standards as required by Measure J, please sign below and return it to the attention of the project planner indicated on Page1 of this Request for Comments form.

PRELIMINARY REPORT - A

In response to the application for a policy of title insurance referenced herein, Chicago Title Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(s) of title insurance to be issued hereunder will be policy(s) of Chicago Title Insurance Company, a Florida Corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

| 2nd Installment | \$49,979.05, Open |
| Must be Paid By: | April 10, 2018 |
| Bill No.: | 0489444 |

3. Prior to close of escrow, please contact the Tax Collector's Office to confirm all amounts owing, including current fiscal year taxes, supplemental taxes, escaped assessments and any delinquencies.

4. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

5. Easement(s) for the purpose(s) shown below and rights incidental thereto as granted in a document.

| | |
|-------------|--|
| Granted to: | Contra Costa County |
| Purpose: | Storm drainage |
| Recorded: | January 30, 1976, Instrument No. 10675, Book 7752, Page 435, of Official Records |
| Affects: | Southeasterly portion of premises |

6. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, sexual orientation, familial status, marital status, disability, handicap, national origin, citizenship, immigration status, primary language, ancestry, source of income, gender, gender identity, gender expression, medical condition or genetic information, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

| | |
|-----------------|---|
| Recording Date: | March 26, 1980 |
| Recording No.: | 80-38732, Book 9787, Page 803, Official Records |

EXCEPTIONS (Continued)

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

Contains no reversionary clause.

7. Easement(s) for the purpose(s) shown below and rights incidental thereto as delineated or as offered for dedication, on the Map of Subdivision 5967, filed June 23, 1981, Book 253 of Maps, Page 49, Contra Costa County Records.

Purpose: Sanitary sewer
Affects: Southeasterly portion of premises

Purpose: Storm drainage
Affects: Southeasterly portion of premises and the northeasterly 10 feet of premises

8. The fact that the ownership of said land does not include rights to or from Bollinger Canyon Road, abutting said land, such rights having been relinquished by the Map of Subdivision 5967, filed June 23, 1981, Book 253 of Maps, Page 49, Contra Costa County Records.

9. Easement(s) for the purpose(s) shown below and rights incidental thereto as granted in a document.

Granted to: Pacific Gas and Electric Company, a California corporation
Purpose: Underground and aboveground electric and gas facilities
Recorded: June 14, 1982, Instrument No. 82-65567, Book 10811, Page 52, of Official Records
Affects: Southwesterly 10 feet of premises

Limitations on the use, by the owners of said Land, of the easement area as set forth in the easement document shown hereinabove.

Reference is hereby made to said document for full particulars.

10. Matters contained in that certain document entitled "Memorandum of Agreement" dated October 5, 1981, executed by and between Granada Sales Incorporated and Pacific Gas and Electric Company recorded July 12, 1982, Instrument No. 82-76947, Book 10849, Page 43, of Official Records.

Reference is hereby made to said document for full particulars.

11. Easement(s) for the purpose(s) shown below and rights incidental thereto as granted in a document.

Granted to: Pacific Gas and Electric Company, a California corporation
Purpose: Underground and above ground electric and gas facilities
Recorded: August 20, 1987, Instrument No. 87-178038, Book 13848, Page 610, of Official Records
Affects: Southeasterly 10 feet of premises

Limitations on the use, by the owners of said Land, of the easement area as set forth in the easement document shown hereinabove.

Reference is hereby made to said document for full particulars.

EXCEPTIONS (Continued)

12. Matters contained in that certain document entitled "Annexation and Development Agreement By and Between the City of San Ramon and Sunset Development Company, Granada Sales, Inc., Annabel Investment Company and Alexander Properties Company Relative to the Development Known as Bishop Ranch" dated November 24, 1987, executed by Annabel Investment Company, a limited partnership, et al, and the City of San Ramon, recorded December 9, 1987, Instrument No. 87-257496, Book 14062, Page 1, of Official Records.

Reference is hereby made to said document for full particulars.

Said Annexation and Development Agreement has been amended by the following instruments executed by and between Annabel Investment Company, et al, and the City of San Ramon:

- A. Amendment No. 1, dated September 24, 1991, recorded July 28, 1995, Instrument No. 95-122762, Official Records.
 - B. Amendment No. 2, dated September 5, 1996, recorded September 12, 1996, Instrument No. 96-171620, Official Records.
 - C. Amendment No. 3, dated April 14, 1998, recorded June 10, 1998, Instrument No. 98-131347, Official Records.
 - D. Amendment No. 4, dated May 28, 2002, recorded July 8, 2002, Instrument No. 2002-237692, Official Records.
 - E. Amendment No. 5, dated January 25, 2008, recorded February 1, 2008, Instrument No. 2008-21245, Official Records.
 - F. Amendment No. 6, dated November 9, 2008, recorded December 10, 2008, Instrument No. 2008-265772, Official Records.
 - G. Amendment No. 7 dated December 15, 2009, recorded December 22, 2009, Instrument No. 2009-299472, Official Records.
 - H. Amendment No. 8 dated August 13, 2014, recorded August 27, 2014, Instrument No. 2014-0144460, Official Records.
13. Intentionally deleted
14. Easement(s) for the purpose(s) shown below and rights incidental thereto as reserved in a document;
- Reserved by: Sunset Land Company, LLC, a California limited liability company
 Purpose: Light poles
 Recorded: June 22, 2001, Instrument No. 2001-0176013-00, of Official Records
 Affects: Northwesterly portion of premises

EXCEPTIONS (Continued)

15. Easement(s) for the purpose(s) shown below and rights incidental thereto as reserved in a document;

Reserved by: Sunset Land Company, LLC, a California limited liability company
 Purpose: Roadway and public utilities
 Recorded: June 29, 2001, Instrument No. 2001-0186796-00, of Official Records
 Affects: Southwesterly and southeasterly portions of premises

16. In a search of the Recorder's Office Records, the following matter has recorded, possibly affecting an interest in the herein described property.

A tax lien for the amount shown and any other amounts due, in favor of the United States of America, assessed by the District Director of Internal Revenue.

Federal Serial No.: None shown
 Taxpayer: Masud R. Mehran
 Owner of Record: Alexander R. Mehran, Trustee of the Alexander Mehran Revocable Trust
 Amount: \$22,467,596.73
 Recording Date: February 15, 2017
 Recording No: 2017-0028910, of Official Records

Although the document contains language that the property affected is "one stock certificate, evidencing 100 total shares of stock in Sunset Development Company ----- and this notice of lien does not attach to any other real or personal property interest ...", we will require a Certificate of Discharge to be recorded, alleviating any lien from the herein described property.

17. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

18. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

19. The search did not disclose any open mortgages or deeds of trust of record, therefore the Company reserves the right to require further evidence to confirm that the property is unencumbered, and further reserves the right to make additional requirements or add additional items or exceptions upon receipt of the requested evidence.

**EXCEPTIONS
(Continued)**

20. Before issuing its policy of title insurance, the Company will require the following for the below-named limited partnership:

Name: BR3A, LP, a California limited partnership

Certificate of Limited Partnership filed with the Secretary of State, in compliance with the provisions of the California Revised Limited Partnership Act, Section 15611 et. seq., Corporations Code.
Certified Copy of the Certificate of Limited Partnership certified by the Secretary of State filed with the County Recorder.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation

21. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

Limited Liability Company: BR3AGP, LLC – General Partner

- a) A copy of its operating agreement, if any, and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member
- b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps
- c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member
- d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created
- e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

22. The Company will require that an Owner's Affidavit be completed by the party(s) named below before the issuance of any policy of title insurance.

Party(s): BR3A, LP, a California limited partnership

The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit.

**EXCEPTIONS
(Continued)**

23. The transaction contemplated in connection with this Report is subject to the review and approval of the Company's Corporate Underwriting Department. The Company reserves the right to add additional items or make further requirements after such review.

END OF EXCEPTIONS

NOTES

1. None of the items shown in this report will cause the Company to decline to attach CLTA Endorsement Form 100 to an Extended Coverage Loan Policy, when issued.
2. Note: The only conveyance(s) affecting said Land, which recorded within 24 months of the date of this report, are as follows:

| | |
|-----------------|--|
| Grantor: | The City of San Ramon, a municipal corporation |
| Grantee: | BR3A, LP, a California limited partnership |
| Recording Date: | August 11, 2016 |
| Recording No: | 2016-0160975, of Official Records |
3. Note: The charge for a policy of title insurance, when issued through this application for title insurance, will be based on the Short Term Rate.
4. Your application for title insurance was placed by reference to only a street address or tax identification number. Based on our records, we believe that the legal description in this report covers the parcel(s) of Land that you requested. If the legal description is incorrect, the seller/borrower must notify the Company and/or the settlement company in order to prevent errors and to be certain that the correct parcel(s) of Land will appear on any documents to be recorded in connection with this transaction and on the policy of title insurance.
5. Note: If a county recorder, title insurance company, escrow company, real estate broker, real estate agent or association provides a copy of a declaration, governing document or deed to any person, California law requires that the document provided shall include a statement regarding any unlawful restrictions. Said statement is to be in at least 14-point bold face type and may be stamped on the first page of any document provided or included as a cover page attached to the requested document. Should a party to this transaction request a copy of any document reported herein that fits this category, the statement is to be included in the manner described.
6. Note: Any documents being executed in conjunction with this transaction must be signed in the presence of an authorized Company employee, an authorized employee of an agent, an authorized employee of the insured lender, or by using Bancserv or other approved third-party service. If the above requirement cannot be met, please call the Company at the number provided in this report.
7. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.
8. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

State Water Resources Control Board
Division of Drinking Water

November 2, 2018

Mr. Bruce Wolfe
Executive Officer
Attn: Mr. Blair Allen
RWQCB – San Francisco Region
1515 Clay Street, Suite
Oakland, CA 94612

Dear Mr. Wolfe:

Review and Conditional Acceptance of Recycled Water Plans and Specifications for the EBMUD – Recycled Water Use Project – Bishop Ranch City Center 6000 Bollinger Canyon Road - System No. 0190004.

The State Water Resources Control Board – Division of Drinking Water (Division) has reviewed the EBMUD – Recycled Water Use Project – Bishop Ranch City Center 6000 Bollinger Canyon Road, dated July 2018. This is a 300,000 ft² shopping, dining and entertainment complex that is located in the heart of Bishop Ranch. It is essentially one large building complex that has a center court yard with a water fountain and lawn area that occupies a whole city block bordered on north side by Bishop Drive, on the east side by Camino Ramon, on the south side by Bollinger Canyon Road, on the west side by Sunset Drive. The building complex has two floors for retail businesses that face the center court yard and the exterior building perimeter. There is a three level covered parking garage and street level uncovered parking lot. The shopping complex is scheduled to open in November 2018 in time for the holiday shopping season. EBMUD will supply domestic water for potable usage and recycled water for landscape irrigation. On October 3, 2018, Melvin Yee of the Division met with Joaquin Cruz, EBMUD Associate Civil Engineer; Larry Harden, Vice President Construction for Sunset Development; Josh Hecock, Project Manager for Plant Construction Company - Potable Water and Recycled Water Irrigation Systems; Kelly Stockton, Project Manager for Plant Construction Company– Interior and Exterior Electrical and Mechanical Systems; and Patrick Baldwin, Landscape Architect for Burton Studio for on an on-site inspection of the Bishop Ranch City Center complex, and the proposed domestic water and recycled water irrigation plumbing configurations and controls.

The following summarizes the Division's findings: Bishop Ranch City Center has two floors designed for retail businesses and a 10 screen luxury movie complex. The complex has 80 suites consisting of 75 tenant spaces and 5 management/leasing rooms. Currently, 30 major tenants have leased space. Major anchor tenants include: Restaurants (Slanted Door, Fieldwork Brewing Company, Mendocino Farms, C Casa, Boba Guys, Roam Artisan Burgers, Ramen Hiroshi); Retail Shopping (Pottery Barn, West Elm, The Piece Store, Athleta, Trader M, Alys Grace); Fitness Gym (Equinox); Movie Cinema (The Lot).

FELICIA MARCUS, CHAIR | EILEEN SOBECK, EXECUTIVE DIRECTOR

50 D Street, Suite 200, Santa Rosa, CA 95404 | www.waterboards.ca.gov

Bruce Wolfe
Page 2
November 2, 2018

The proposed project calls for EBMUD to supply domestic water to the building complex for potable use at four separate locations with 34 individual domestic potable use meters: 6 domestic potable use meters located on Bollinger Canyon, 8 domestic use meters located adjacent to the bioswale on Bollinger Canyon, 10 domestic potable use meters located in the parking lot on the corner of Camino Ramon and Bishop Ranch Drive, and 10 domestic use meters located along Sunset Drive. There is one fire service meter to the complex located on Bollinger Canyon Road.

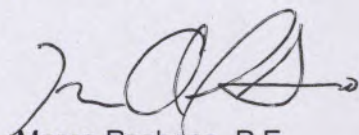

There is a separate piping network for potable water for the building complex and a separate piping network for irrigation of exterior landscapes. There are no interior building landscapes. There is approximately 147,961 ft² of exterior irrigation landscapes that front retail business entrances and pedestrian walkways, the courtyard event area, the park lot area, and the bioswales. The bioswales are also designed to be irrigated by storm water drainage from the uncovered street level parking lot areas.

The customer water and recycled water connections described in the plans and specifications comply with the Division's Recycled Water Criteria and California Waterworks Standard for the Separation of Water Mains and Recycled Water Pipelines. They also conform with the AWWA Guidelines for Distribution of Non-potable Water. Reduced backflow preventers are provided at all EBMUD domestic water supply service meters to protect the domestic water supply from cross-connection hazards and/or backflow that may occur on the property.

EBMUD is hereby given conditional acceptance to connect the respective on-site irrigation systems to the recycled water irrigation system subject to the completion of items noted in the enclosed document entitled EBMUD – Recycled Water Use Project – Punch List of Work to Be Completed for Bishop Ranch City Center 6000 Bollinger Canyon Road.

If there are any questions, please contact Elena Joy Pelen at (510) 620-3467 or ElenaJoy.Pelen@waterboards.ca.gov.

Sincerely,

Marco Pacheco, P.E.
San Francisco District Engineer
Division of Drinking Water

**EBMUD – Recycled Water Use Project –
Punch List of Work to Be Completed for
Bishop Ranch City Center 6000 Bollinger Canyon Road**

The following is a general and site specific list of work that must be completed prior to the connection of EBMUD's recycled water irrigation system to each of the customers of listed under the EBMUD – Recycled Water Use Project – Bishop Ranch City Center 6000 Bollinger Canyon Road .

1. Perform cross-connection test to ensure that there are no cross-connections between the domestic potable water supply and the recycled water system.
2. Install recycled water signs at landscape areas (adjacent to exterior building perimeters, turf areas adjacent to buildings and the parking lot areas and picnic tables) where recycled water is being used for irrigation as indicated in the customer connection drawings.
3. Perform coverage test and modify sprinklers as necessary to minimize excessive over-spray of sidewalks and streets.
4. Ensure valves and appurtenances not shown in customer connection drawings are in the as-built drawings.
5. Install recycled water identification tags on all control valves, quick coupler valves, boxes, and other appurtenances in accordance with EBMUD standards. Identify exposed irrigation pipes by appropriate color paint or recycled water purple wrapping.
6. Ensure that quick coupling valves are made specifically for recycled water use.
7. Repair or replace valve box covers that do not seal completely because of interference from vegetation, improper installation or construction, and/or broken covers.
8. Repair or replace leaking valves.
9. Secure all necessary permits and approvals from regulatory agencies and fire departments as needed.
10. Ensure all new and existing backflow devices are tested on an annual basis by a certified cross- connection device tester.
11. The portions of the recycled water piping system that are in areas subject to access by the general public shall not include any hose bibs.
12. At recycled water use sites where potable water is used, all potable water meters and above grade water devices, such as backflow prevention devices and hose bibs, must be tagged or labeled with potable water identification tags or labels.

13. Notification signs must be posted at adequate intervals around the area to insure people know recycled water is being used to irrigate the landscape and this water is not potable. Signs should state "RECYCLED WATER" and this water is not potable.
14. Recycled water shall not be applied to irrigation areas during periods when uncontrolled runoff may occur.
15. Recycled water shall not be allowed to escape the recycled use areas in the form of surface runoff.
16. Direct or windblown spray mist, or runoff from irrigation areas shall not enter dwellings, designated outdoor eating areas, food handling facilities, roadways, or any other area where the public would be accidentally exposed to recycled water.

The following are site specification requirements for the Bishop Ranch –City Center.

1. Ensure the 8 domestic water meters with reduced pressure (RP) backflow devices located on Bollinger Canyon Road supply supply potable water to the building complex as shown on Sheet 5 (Base C).
2. Ensure the two recycled water irrigation controllers located adjacent to the bioswale and recycled water meter on Camino Ramon have recycled water signage as shown on Sheet 5 (Base C).
3. Ensure the 6 domestic water meters with RP backflow devices located adjacent to the bioswale on Bollinger Canyon supply potable water to the building complex as shown on Sheet 6 (Base D).
4. Ensure the 10 domestic water meters with RP backflow devices located adjacent to the bioswale on Sunset Drive supply potable water as shown on Sheet 3 (Base A).
5. Ensure the 10 domestic water meters with RP backflow devices located in parking lot on corner of Camino Ramon and Bishop Ranch supply potable as shown on Sheet 4 (Base B).
6. Ensure the recycled water irrigation main line that lies within 10 feet of the potable water line is sleeved as shown on Sheet 2 and Sheet 4 (Base B).
7. Ensure there is recycled water signage on Point of Connection Cover Plate A located adjacent to the recycled water meter on Camino Ramon as shown on Sheet 2.
8. Ensure there is recycled water signage on Point of Connection Cover Plate C located adjacent to the recycled water meter on Camino Ramon as shown on Sheet 5.
9. Ensure there recycled water signage installed in outside building perimeter planter beds that front business store entrances as shown on Sheet 2.

10. Ensure potable water quick coupler located in the building perimeter planter beds and open-space interior locations within the shopping area are labeled as potable water as shown on Sheet 2 (Index).
11. Ensure the Event Area has recycled water signage in the proposed lawn area and tree area as shown on Sheet 4 (Base B).
12. Ensure the water fountain is labeled as potable water as shown on Sheet 4 (Base B).

The following work must be completed within 30 days following connection to EBMUD's recycled water system. Failure to complete all work within this period will result in EBMUD suspension of service.

1. Complete all work shown on the customer connection drawings.
2. Program clocks to irrigate the areas designated on the customer connection drawings to generally between sunset and sunrise, or when people are not present at the site.
3. Identification of On-site Supervisor and phone number. Provide documentation of previous training in the use of recycled water or attend a training session conducted by EBMUD staff.
4. Verify that on-site irrigation piping system is schematically correct and complete in as-built drawings.

Soil Boring Permit

Permit Number: 15B 0517

PE Number: 4303

Date Received: December 17, 2015

WP Number: WP0021653

Issued By: SALVADOR RUIZ

Date Issued: 22-Dec-2015

Date Expires: 22-Jun-2016

| | |
|---------------------------|-------------------------------------|
| Intended Use: SOIL BORING | # of Borings or Well ID: 14 BORINGS |
|---------------------------|-------------------------------------|

The issuance of this permit by Contra Costa County Environmental Health Division does not guarantee a satisfactory and an indefinite operation of any well. Permit expires in 180 calendar days from date of approval. Permits are non-transferable, and can be suspended or revoked. If more time is required for the project, a time extension may be granted if reasons warrant it in writing.

Disclosures & Forms for Owner-Builders Applying for Construction Permits

IMPORTANT! NOTICE TO PROPERTY OWNER

Dear Property Owner:

An application for a building permit has been submitted in your name listing yourself as the builder of the property improvements specified at the address on the opposite side of this application.

We are providing you with an Owner-Builder Acknowledgement and Information Verification Form to make you aware of your responsibilities and possible risk you may incur by having this permit issued in your name as the Owner-Builder. We will not issue a building permit until you have read, initiated your understanding of each provision, signed, and returned this form to us at our official address indicated. An agent of the owner cannot execute this notice unless you, the property owner, obtain the prior approval of the permitting authority.

OWNER'S ACKNOWLEDGEMENT AND VERIFICATION OF INFORMATION

DIRECTIONS: Read and initial each statement below to signify you understand or verify this information.

I understand a frequent practice of unlicensed persons is to have the property owner obtain an "Owner-Builder" building permit that erroneously implies that the property owner is providing his or her own labor and material personally. I, as an Owner-Builder, may be held liable and subject to serious financial risk for any injuries sustained by an unlicensed person and his or her employees while working on my property. My homeowner's insurance may not provide coverage for those injuries. I am willfully acting as an Owner-Builder and am aware of the limits of my insurance coverage for injuries to workers on my property.

I understand building permits are not required to be signed by property owners unless they are responsible for the construction and are not hiring a licensed Contractor to assume this responsibility.

I understand as an "Owner-Builder" I am the responsible party of record on the permit. I understand that I may protect myself from potential financial risk by hiring a licensed Contractor and having the permit filed in his or her name instead of my own.

I understand Contractors are required by law to be licensed and bonded in California and to list their license numbers on permits and contracts.

I understand that if I employ or otherwise engage any persons, other than California licensed Contractors, and the total value of my construction is at least five hundred dollars (\$500), including labor and materials, I may be considered an "employer" under state and federal law.

I understand if I am considered an "employer" under state and federal law, I must register with the state and federal government, withhold payroll taxes, provide workers' compensation disability insurance, and contribute to unemployment compensation for each "employee." I also understand my failure to abide by these laws may subject me to serious financial risk.

I understand under California Contractors' State License Law an Owner-Builder who builds single-family residential structures cannot legally build them with the intent to offer them for sale, unless all work is performed by licensed subcontractors and the number of structures does not exceed four within any calendar year, or all of the work is performed under contract with a licensed general building Contractor.

I understand as an Owner-Builder if I sell the property for which this permit is issued, I may be held liable for any financial or personal injuries sustained by any subsequent owner(s) that result from any latent construction defects in the workmanship or materials.

I understand I may obtain more information regarding my obligations as an "employer" from the Internal Revenue Service, the United States Small Business Administration, the California Department of Benefit Payments, and the California Division of Industrial Accidents. I also understand I may contact the California Contractors' State License Board (CSLB) at 1-800-321-CSLB (2752) or www.cslb.ca.gov for more information about licensed contractors.

I am aware of and consent to an Owner-Builder permit applied for in my name, and understand that I am the party legally and financially responsible for proposed construction activity at the address listed on the opposite side of this form.

I agree that, as the party legally and financially responsible for the proposed construction activity, I will abide by all applicable laws and requirements that govern Owner-Builders as well as employers.

I agree to notify the issuer of this form immediately of any additions, deletions, or changes to any of the information I have provided on this form. Licensed contractors are regulated by laws designed to protect the public. If you contract with someone who does not have a license, the Contractors' State License Board may be unable to assist you with any financial loss you may sustain as a result of a complaint. Your only remedy against unlicensed Contractors may be in civil court. It is also important for you to understand that if an unlicensed Contractor or employee of that individual firm is injured while working on your property, you may be held liable for damages. If you obtain a permit as Owner-Builder and wish to hire Contractors, you will be responsible for verifying whether or not those Contractors are properly licensed and the status of their workers' compensation insurance coverage.

Before a building permit can be issued, this form must be completed and signed by the property owner and returned to the agency responsible for issuing the permit.

Note: A copy of the property owner's driver's license, form notarization, or other verification acceptable to the agency is required to be presented when the permit is issued to verify the property owner's signature.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Contra Costa County, California
 Survey Area Data: Version 12, Sep 18, 2015

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 11, 2015—Jun 17, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

| Contra Costa County, California (CA013) | | | |
|---|--|--------------|----------------|
| Map Unit Symbol | Map Unit Name | Acres in AOI | Percent of AOI |
| Cc | Clear Lake clay, 0 to 15 percent slopes, MLRA 15 | 4.9 | 45.2% |
| CeA | Conejo clay loam, 0 to 2 percent slopes | 2.0 | 18.0% |
| Pb | Pescadero clay loam | 4.0 | 36.7% |
| Totals for Area of Interest | | 10.9 | 100.0% |

Contra Costa County, California

Cc—Clear Lake clay, 0 to 15 percent slopes, MLRA 15

Map Unit Setting

National map unit symbol: 2vbsq
Elevation: 0 to 1,060 feet
Mean annual precipitation: 13 to 32 inches
Mean annual air temperature: 57 to 61 degrees F
Frost-free period: 260 to 300 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Clear lake and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Clear Lake

Setting

Landform: Basin-floor remnants
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Clayey alluvium derived from metamorphic and sedimentary rock

Typical profile

Ap - 0 to 5 inches: clay
Ass - 5 to 20 inches: clay
Bss - 20 to 30 inches: clay
Bkss1 - 30 to 46 inches: clay
Bkss2 - 46 to 60 inches: clay

Properties and qualities

Slope: 0 to 15 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat):
Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: Frequent
Calcium carbonate, maximum in profile: 4 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.5 to 3.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 7.0
Available water storage in profile: Moderate (about 8.6 inches)

Interpretive groups

Land capability classification (irrigated): 2w

Land capability classification (nonirrigated): 4w

Hydrologic Soil Group: C

Minor Components

Pescadero

Percent of map unit: 4 percent

Landform: Depressions

Cropley

Percent of map unit: 4 percent

Conejo

Percent of map unit: 4 percent

Unnamed

Percent of map unit: 3 percent

Landform: Strand plains

Data Source Information

Soil Survey Area: Contra Costa County, California

Survey Area Data: Version 12, Sep 18, 2015

Contra Costa County, California

CeA—Conejo clay loam, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: h98j
Elevation: 10 to 1,000 feet
Mean annual precipitation: 14 to 25 inches
Mean annual air temperature: 59 degrees F
Frost-free period: 260 to 300 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Conejo and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Conejo

Setting

Landform: Valleys
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from sedimentary rock

Typical profile

H1 - 0 to 27 inches: clay loam
H2 - 27 to 60 inches: clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Well drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat):
Moderately high (0.20 to 0.57 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: High (about 11.4 inches)

Interpretive groups

Land capability classification (irrigated): 1
Land capability classification (nonirrigated): 4c
Hydrologic Soil Group: C

Minor Components

Botella

Percent of map unit: 5 percent

Unnamed

Percent of map unit: 5 percent

Landform: Depressions

Clear lake

Percent of map unit: 3 percent

Landform: Depressions

Garretson

Percent of map unit: 2 percent

Data Source Information

Soil Survey Area: Contra Costa County, California

Survey Area Data: Version 12, Sep 18, 2015

Contra Costa County, California

Pb—Pescadero clay loam

Map Unit Setting

National map unit symbol: h9bb

Elevation: 10 to 100 feet

Mean annual precipitation: 14 to 19 inches

Mean annual air temperature: 59 degrees F

Frost-free period: 260 to 280 days

Farmland classification: Not prime farmland

Map Unit Composition

Pescadero and similar soils: 85 percent

Minor components: 10 percent

Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Pescadero

Setting

Landform: Rims, valleys

Landform position (two-dimensional): Toeslope

Landform position (three-dimensional): Rise, talf

Down-slope shape: Linear

Across-slope shape: Linear

Parent material: Alluvium derived from sedimentary rock

Typical profile

H1 - 0 to 5 inches: clay loam

H2 - 5 to 43 inches: clay

H3 - 43 to 66 inches: stratified silt loam to silty clay

Properties and qualities

Slope: 0 to 2 percent

Depth to restrictive feature: More than 80 inches

Natural drainage class: Poorly drained

Runoff class: Medium

Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)

Depth to water table: About 60 to 72 inches

Frequency of flooding: Rare

Frequency of ponding: Rare

Calcium carbonate, maximum in profile: 10 percent

Salinity, maximum in profile: Strongly saline (16.0 mmhos/cm)

Sodium adsorption ratio, maximum in profile: 160.0

Available water storage in profile: Moderate (about 7.4 inches)

Interpretive groups

Land capability classification (irrigated): 4s

Land capability classification (nonirrigated): 4s

Hydrologic Soil Group: D

Minor Components

Clear lake

Percent of map unit: 10 percent

Landform: Basin floors

Landform position (two-dimensional): Toeslope

Landform position (three-dimensional): Talf

Down-slope shape: Linear

Across-slope shape: Linear

SNOWFLAKE TO THE BAY

In the East Bay, 1.4 million customers rely on high-quality EBMUD water. Almost all of EBMUD's water comes from the 577-square mile watershed of the Mokelumne River on the western slope of the Sierra Nevada. This area consists mostly of national forest, EBMUD-owned lands and other undeveloped lands little affected by human activity.

EBMUD's water system begins in the Sierra Nevada, where snowmelt from Alpine, Amador and Calaveras counties flows into Pardee Reservoir near Valley Springs. Three large aqueducts transport water 90 miles from Pardee Reservoir to every customer, hydrant and fire service in EBMUD's service area. During drought or for operational needs, EBMUD may draw water from other watersheds (like the Sacramento River) or from local watersheds in the East Bay.

EBMUD's skilled employees operate a complex network of reservoirs, pipes, pumps and water treatment plants. This infrastructure is rarely seen, but works around the clock to provide safe, reliable drinking water every day.

HOW WE MANAGE WATER QUALITY

All water is treated at one of the EBMUD water treatment plants before it reaches your tap. These treatment plants can filter and process up to 375 million gallons of water daily. EBMUD ensures high water quality by carefully managing and protecting watershed lands and reservoirs, using best practices to treat drinking water, operating and maintaining an intricate

distribution system, and by quickly addressing customer questions or concerns. EBMUD samples and tests your water extensively to ensure it is safe to drink. We look for more than 100 substances including microorganisms, pesticides, herbicides, asbestos, lead, copper, petroleum products and by-products of industrial and water treatment processes. More than 20,000 laboratory tests each year ensure the safety of your drinking water.

NEW SYSTEMS FOR NEW CHALLENGES

EBMUD invests your rate dollars to efficiently provide the highest quality water. We have completed replacement of the ozone systems at Upper San Leandro and Sobrante water treatment plants. Ozone removes traces of naturally occurring compounds that can impart taste and odor to the water.

Ozone has been used at these water treatment plants since the 1990s. These new capital improvements will improve their resilience to changes in source water with significantly improved energy efficiency.

We are upgrading all of our water treatment plants to improve performance, increase reliability, and ensure safety for staff, neighbors and the environment. It will take years to complete, but careful planning and design will ensure continued production of high quality water into the future.

Orinda Water Treatment Plant, which delivers water to 800,000 East Bay customers, received \$22 million in upgrades.

WHERE YOUR WATER IS TREATED

Most of our water comes from the Mokelumne River watershed in the Sierra Nevada foothills. The remaining water comes from water collected in the East Bay watershed.

Before reaching your tap, EBMUD treats the water at one of the water treatment plants in the East Bay. Some customers receive water from different treatment plants at different times of the year. The taste and odor of your tap water may change throughout the year because of operational changes (such as when a treatment plant is shut down for maintenance) or due to changes in the source water.

WHAT WAS DETECTED AND REPORTED

In 2018, EBMUD treated raw water from multiple sources and consistently provided high-quality drinking water, meeting or surpassing every public health requirement set by the State Water Resources Control Board (State Board) and the U.S. Environmental Protection Agency (USEPA).

The tables on the following pages show the measured amounts of contaminants detected in 2018 or in the most recent year sampling was required. Samples were collected in EBMUD's source waters, at water treatment plants, in the distribution system or at customers' taps.

Although EBMUD tests for more than 100 substances, this report only lists those detected at or above the state or federal level required for reporting. In this case, no news is good news!

Table 1 – Regulated for public health

These contaminants are regulated to protect your health. They have maximum contaminant levels, known as primary MCLs, set by the State Board or the USEPA. These levels are set as close to the established public health goals as is economically and technologically feasible.

Table 2 – Regulated for drinking water aesthetics

These contaminants are regulated to maintain aesthetic qualities such as smell, taste and appearance of drinking water. They have maximum contaminant levels, also known as secondary MCLs, set by the State Board.

Table 3 – Unregulated contaminants

These contaminants are not currently regulated. Unregulated contaminant monitoring helps the State Board and the USEPA to determine where certain contaminants occur and whether the contaminants need to be regulated. The results under Unregulated Contaminant Monitoring Rule (UCMR3 and UCMR4) must be reported if detected. The UCMR4 is an extended list of unregulated contaminant monitoring that started in 2018 and will continue through 2019. This table also includes other contaminants that have state notification levels and water agencies are encouraged—but not required—to report results to consumers.

Table 4 – Other parameters of interest to customers

These water measurements, such as pH, hardness and alkalinity, may be of interest to customers.

HOW TO READ THE WATER QUALITY TABLE

Find your location on the map on page 2. Note which water treatment plant(s) serve that area.

- Go to the first column in the tables on pages 6–8 to find the contaminant you are interested in. Remember – no news is good news!
- Column two lists the state or federal goal. At that amount or lower, there is no known or expected risk to health from the contaminants' presence in drinking water. Not all listed contaminants have state or federal goals.
- Column three notes the highest amount that the State Board or the USEPA allows. This amount is usually not as low as the public health goal in column two.
- Column four lists the average amount detected across the EBMUD service area or at designated locations.
- Find the column that corresponds to the water treatment plant or plants that serve you. This is the amount of the contaminant detected in your area's water.
- The last column lists how the contaminant typically gets into your drinking water.

EBMUD 2018 ANNUAL WATER QUALITY REPORT

In 2018, your drinking water was consistently the highest quality, surpassing every public health requirement set by the State Water Resources Control Board Division of Drinking Water and the U.S. Environmental Protection Agency.

UNITS

- gpg** grains per gallon
- NTU** nephelometric turbidity unit, a measure of the cloudiness of water
- ppm** parts per million. One ppm is like 1 second in 11.5 days. (mg/L)
- ppb** parts per billion. One ppb is like 1 second in nearly 32 years. (µg/L)
- ppt** parts per trillion. One ppt is like 1 second in nearly 32,000 years. (ng/L)
- TON** threshold odor number, a measure of odor in water
- µS/cm** microsiemens per centimeter, a measure of electrical conductance

May, a Senior Water Treatment Operator, worked to upgrade the ozone system at the Upper San Leandro Water Treatment Plant.

KEY TERMS

- AL** Regulatory action level. The concentration which, if exceeded, triggers treatment or other requirements that a water system must follow.
- DBP** Disinfection by-products. These are formed when chlorine and/or ozone reacts with natural constituents in water. Trihalomethanes (THMs), haloacetic acids (HAAs), chlorate, and bromate are disinfection by-products.
- D/DBPs** Disinfection by-products, disinfection residuals and disinfection by-product precursors.
- MCL** Maximum contaminant level. The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs or MCLGs as is economically and technologically feasible. Secondary MCLs address odor, taste and appearance of drinking water.
- MCLG** Maximum contaminant level goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

- MRDL** Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- MRDLG** Maximum residual disinfectant level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- NA** Not applicable.
- primary drinking water standard** These standards regulate contaminants that affect health by setting MCLs, MRDLs, and treatment techniques (TT) along with their monitoring and reporting requirements.
- PHG** Public health goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California EPA.
- TOC** Total organic carbon. A measure of organic content in the water.

- turbidity** A measure of the cloudiness of water. Turbidity is monitored because it is a good indication of the effectiveness of our filtration systems.
- TT** Treatment technique. A required process intended to reduce the level of a contaminant in drinking water.
- 90th percentile** A measure that indicates 90 percent of the samples had a lower result.

NOTES

a) See page 11 for additional information about fluoride in drinking water. **b)** 135 schools requested lead sampling. See Page 10 for additional information about lead in drinking water. **c)** Highest running annual average. **d)** Chloramine residuals in the distribution system are measured as an equivalent quantity of chlorine. When the chloramine residual cannot be detected, the sample is further analyzed to ensure that microbiological water quality is in compliance with regulations. **e)** Compliance is determined based on the highest locational running annual average results. Water treatment plant values show the range of individual sample results. **f)** Parameters with a notification level.

KEY TERMS

NL Notification level. A health-based advisory level established by the State Board for contaminants in drinking water that lack MCLs.

UCMR The federal unregulated contaminant monitoring rule parts 3 and 4.

NOTES

f) Parameters with a notification level.
g) Grains per gallon (gpg) is a measure of water hardness. Knowing the amount can help improve the function of dishwashers, cooling equipment and other industrial processes. Refer to your appliance manufacturer's instruction manual for the optimum grains per gallon level.

WATER QUALITY REGULATIONS

This report reflects changes in drinking water regulatory requirements during 2018. To ensure that tap water is safe to drink, the State Board and the USEPA prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. California Department of Public Health (CDPH) and United States Food and Drug Administration regulations establish limits for contaminants in bottled water that provide the same protection for public health. Additional information on bottled water is available on the CDPH website at www.cdph.ca.gov/Programs/CEH/DFDCS/Pages/FDBPrograms/FoodSafetyProgram/Water.aspx.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses, bacteria and protozoa, such as *Cryptosporidium*, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and herbicides that may come from a variety of sources, such as agriculture, urban stormwater runoff and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.

Radioactive contaminants that can be naturally occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects is available online at www.epa.gov/ground-water-and-drinking-water. Contact your healthcare provider or visit the Centers for Disease Control and Prevention (CDC) website for guidelines on using tap water for health or medical purposes.

Vulnerable populations

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and some infants can be particularly at risk from infections.

These people should seek advice about drinking water from their health care providers. USEPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available online at www.cdc.gov/parasites/crypto/index.html.

Cryptosporidium and Giardia

Cryptosporidium is a microbial contaminant found in surface water throughout the United States. Although filtration is highly effective in removing *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100 percent removal. In 2018 our monitoring detected *Cryptosporidium* in our source water.

Cryptosporidium must be ingested to cause disease, and it may be spread through means other than drinking water. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people, infants and small children, and the elderly are at greater risk of developing life-threatening illness. We encourage these individuals to consult their physician regarding appropriate precautions to take to avoid infection.

Giardia is a microbial contaminant that is naturally present in the environment. Our monitoring detected one *Giardia* in one sample of our source water.

Disinfection Byproducts

Chlorine is used to kill pathogens in drinking water to protect public health. However, chlorine also reacts with naturally-occurring organic compounds to form unwanted disinfection byproducts. Disinfection byproducts are present in all chlorinated drinking water.

EBMUD continues to invest in long-term projects to provide more water treatment flexibility and reliability. We are making improvements to the disinfection systems at water treatment plants to ensure continued compliance with the disinfection requirements while minimizing formation of byproducts.

Water quality improvement projects

EBMUD is designing a project for the San Pablo Reservoir to improve water quality by adding oxygen to the bottom of the reservoir. This will prevent release of nutrients and metals from the sediments, discouraging the growth of algae and improving water quality. Other upcoming improvements include new disinfection tanks at the water treatment plants, improvements to our chemical storage and handling facilities, and new clarification basins to enable greater removal of particles in the water. These large capital projects will modernize the treatment plants, improve worker and environmental safety, and improve our capability to treat challenging source waters.

REPORT A WATER QUALITY CONCERN

Do you have a question or concern about your water quality? Call 866-403-2683. EBMUD inspectors respond to calls within one business day regarding water which appears dirty, colored, has foreign particles or unusual taste or odor.

Lead in drinking water

If present, elevated levels of lead can cause serious health problems. Pregnant women, infants and young children are typically more vulnerable to lead in drinking water than the general population.

Lead in drinking water is primarily from materials and components associated with lead in water distribution pipes and home plumbing. EBMUD replaced all known lead service pipes in its service area in the 1990s and continues to actively seek and replace lead materials wherever they are found. We maintain an aggressive corrosion control program to reduce lead leaching from our water mains and customer piping. Still, it is possible that lead may be present as a result of materials used in your home's plumbing. According to the USEPA, homes built before 1986 are more likely to have lead pipes or fixtures and solder that contain lead.

Sierra snowmelt makes up 90 percent of EBMUD's water. In the East Bay, we can confidently drink straight from the sink.

If you suspect you have lead in your fixtures and if your water has been sitting for several hours, you can minimize the potential for lead exposure by running your faucet for 30 seconds to 2 minutes before using water for drinking or cooking. Capture and reuse this water for other uses such as watering ornamental plants.

EBMUD samples and tests your water in accordance with all state and federal drinking water requirements, and will provide a list of results upon request. If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested. In 2017, EBMUD started a new program to provide our customers with free lead testing for their water. Request a voucher by calling Customer Service at 866-403-2683 or email customerservice@ebmud.com for more information.

Lead testing in schools

In 2018, EBMUD received lead sampling requests from 135 schools (preschools through 12th grade). During 2017-2018, 452 schools in the EBMUD service area were sampled for lead. All public schools and roughly 30 percent of the private schools have reported lead sampling results to the State Board as part of EBMUD's lead sampling program. Lead sampling information and results can be found on the State Board website at www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/leadsamplinginschools.html. Per state requirements, the deadline for school lead sampling requests is November 1, 2019.

Information on lead in drinking water, testing methods and steps you can take to minimize lead exposure is available at www.ebmud.com/lead and from the USEPA at www.epa.gov/lead.

Fluoridation

EBMUD is required by state law to add fluoride to drinking water to help prevent dental decay in consumers. Current regulations require fluoride levels in the treated water be maintained between 0.6 to 1.2 ppm with an optimum dose of 0.7 ppm. Our monitoring showed that fluoride levels in the treated water distribution system averaged 0.7 ppm.

According to the American Dental Association and CDC, it is safe to use optimally fluoridated water for preparing infant formula. If an infant is primarily fed infant formula prepared with fluoridated water, there may be an increased chance for mild enamel fluorosis, but enamel fluorosis does not affect the health of the infant or the health of the infant's teeth. To lessen this chance, deionized, purified, distilled or demineralized bottled water can be used.

If you have additional questions about fluoride, contact your health provider. Additional information can be found at www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.shtml or www.cdc.gov/fluoridation websites.

Elzie, a Water System Inspector, takes water samples as part of EBMUD's program to sample lead in schools. This program helps schools to ensure that the water at drinking fountains does not contain lead.

HOW TO CONTACT EBMUD

For more information about water quality or to report a water quality concern, call 866-403-2683 or visit www.ebmud.com/waterquality.

If you would like this report mailed to you, email customerservice@ebmud.com or call 510-986-7555. View this report online at www.ebmud.com/wqr.

EBMUD encourages public participation in decisions affecting drinking water quality and other matters at its Board of Directors meeting held the second and fourth Tuesdays of each month at 1:15 pm, 375 Eleventh Street, 2nd Floor, Oakland.

EBMUD has a seven-member Board of Directors publicly elected from wards within the EBMUD service area. See www.ebmud.com/board.

GENERALIZED GEOLOGIC
MAP OF CALIFORNIA

Geologic maps show the distribution of rocks exposed at the surface of the earth as well as other geologic information. Rocks are grouped according to age and origin on the map. Age of the rocks is considered to be the geologic time at which the rock formed (see Geologic Time Scale on back page). Rocks are classified according to their origin:

1) sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental); 2) igneous rocks form by crystallization of minerals from molten rock. Molten rock beneath the earth's surface is called magma. Magma cools slowly to form coarse-grained igneous rocks such as granite. Molten rock erupted on the earth's surface from volcanoes is called lava and forms volcanic rocks; 3) metamorphic rocks form from preexisting rocks by mineralogical, chemical, and/or structural changes. Other geologic information shown on geologic maps includes structural features such as faults. Faults are fractures in the earth's crust where rocks have moved relative to each other.

The map shown here is generalized from more detailed, larger scale maps. On this map, rocks exposed in California are placed in one of seven units:

Quaternary sedimentary rocks. Gravel, sand, silt, and clay deposited mostly in valleys and lowlands onshore. There are some marine sedimentary rocks of this age in California.

Tertiary sedimentary rocks. Sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin. These rocks are exposed mostly in the coastal regions of California.

Tertiary and Quaternary volcanic rocks. Lava flows erupted from volcanoes. These rocks make up much of the Cascade Range and the Modoc Plateau, and are widespread in eastern California. They also occur in coastal regions.

Mesozoic sedimentary rocks. Sandstone and shale that were deposited mostly in the ocean. The rocks make up the bulk of the Coast Ranges. They also occur in coastal southern California.

Mesozoic granitic rocks. A wide variety of coarse-grained igneous rocks formed when magma that intruded the earth's crust cooled and was later exposed by erosion. Granitic rocks occur throughout the state, but are most common in the mountainous areas such as the Klamath Mountains, the Sierra Nevada, and the Peninsular Ranges. Some granitic rocks are Cenozoic, Paleozoic, and Precambrian.

Mesozoic and Paleozoic metamorphic rocks. Metasedimentary and metavolcanic rocks that make up much of the Klamath Mountains and the Sierran foothills. They are also common in the Basin and Range, the Mojave Desert, the Transverse Ranges, and the Peninsular Ranges.

Serpentinized ultramafic rocks. A special type of rock that does not fit into the three common categories of rocks. The most common rock is serpentine, the California state rock (see CGS Note 14).

CITY OF SAN RAMON
PLANNING / COMMUNITY DEVELOPMENT DEPARTMENT

September 16, 2019

Mr. David Fields
Executive Vice President
Sunset Development Company
2600 Camino Ramon, Suite 201
San Ramon, CA 94583

Subject: Subsurface Investigation
Bishop Ranch 1A, San Ramon, California
ATC Project Number: 118EM01201

Dear Mr. Fields:

ATC Group Services LLC (ATC) has prepared this report to document field activities and findings for the Subsurface Investigation for the above-referenced property. The scope of work described in this transmittal was performed for Sunset Development Company (herein referred to as the Client) and completed in accordance with our proposal dated July 29, 2019 (ATC Proposal 118-2019-0069).

1.0 SITE DESCRIPTION

The property is an approximately 9.25-acre, irregularly shaped single parcel of land located in the City of San Ramon. The property is located southeast of the intersection of Camino Ramon and Bishop Drive in San Ramon, California (Figures 1 and 2). The property is currently undeveloped and the general land use in the vicinity of the property is commercial.

The property exists at a surface elevation of approximately 439 feet above mean sea level (msl). The site surface topography is relatively flat and slopes gently to the southeast, consistent with the regional topography. Based on the local and regional topography, groundwater in the general site area is interpreted to be oriented toward the southeast. Coyote Creek is located approximately 0.6 miles to the southeast.

Based on a review of the Geological Map of the Diablo quadrangle, Contra Costa and Alameda Counties, California Map Dated 2005, the near surface geology consists of surficial sediments derived from the Holocene Era. These sediments are composed primarily of alluvial pebble gravel, sand and clay of valley areas.

According to information from a nearby environmental case located at 1091 Market Place and located approximately 330 feet to the northeast of the property, groundwater occurs at depths ranging from approximately 6 to 14 feet below ground surface (bgs).

2.0 BACKGROUND

Based on the findings of the Phase I Environmental Site Assessment (Phase I ESA) prepared by ATC, dated July 8, 2019, the earliest record of the property is a 1896 topographic map. This topographic map depicts the property as undeveloped land. Aerial photographs obtained for the period between 1939 and 1979 indicate that the property was undeveloped and utilized for agricultural purposes. A 1982 aerial photograph depicts the property as undeveloped, but the agricultural row crops are no longer depicted. The review of historical records indicated that the property was historically utilized for agricultural purposes.

Based on the historical agricultural usage of the property, pesticides and/or herbicides may have been utilized on the property and near-surface soils may have at one time contained these compounds. However, no evidence of large scale pesticide and/or herbicide storage, mixing, or use was observed in historical records reviewed as a component of the Phase I ESA. ATC considered the historical use of agricultural row crops to represent a *recognized environmental concern* as this use typically involved the application pesticides and/or herbicides that may remain in shallow soil.

ATC recommended that if future development activities include soil disturbance such as grading or excavation, soil should be characterized for hazardous substances including herbicides/pesticides to address potential impact from prior agricultural use. If any identified impacted soil removed from the property should be transported and disposed in accordance with applicable regulations. Depending on the results of the characterization activities, preparation of a soil management plan, prior to soil disturbance such as grading or excavation, may be warranted.

3.0 SCOPE OF WORK

ATC was requested to perform additional investigation, including the collection of soil samples, to evaluate potential impacts to shallow soil associated with the historical agricultural use of the property. This work was performed under the oversight of a licensed professional geologist.

3.1 Pre-Field Activities

Prior to initiating field activities, ATC prepared a site specific Health and Safety Plan (HASP) for the site. The HASP complied with Title 29 of the Code of Federal Regulations (CFR) Section 1920.120(j), the California General Industry Safety Order (GISO) and Title 8, California Code of Regulations (CCR) Section 5192. A copy of the HASP was on-site during all field activities.

Drilling permits were not required for this investigation. The public underground utility locating service USA North was notified to identify public utilities in the work area. Private utility locating was conducted by GPRS of San Francisco, CA to identify underground utilities on the property.

3.2 Drilling and Soil Sampling Activities

On August 9, 2019, six (6) soil borings (S-1 through S-6) were advanced on the property (Figure 2). The borings were advanced by Cascade Drilling of Richmond, California. The borings were advanced in a grid pattern over the entire property and advanced to total depths of approximately 2.5 feet bgs using a hand-auger.

Soil samples were collected from each boring at depths of 0 to 0.5, 1.0 to 1.5, and 2.0 to 2.5 feet bgs. The soil samples collected from 0 to 0.5 feet bgs were submitted for analysis, while the remaining soil samples were submitted to the laboratory and placed on hold. Down-hole equipment was decontaminated using detergent, followed by a triple rinse system.

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples and the PID readings for each sample were included on the boring logs (Attachment A). Selected soil samples were collected into laboratory-supplied containers.

Following completion of sample collection and removal of tooling, the borings were backfilled with neat cement grout and completed at the surface to match the surrounding conditions. Investigation derived waste was left onsite in a 55-gallon drum. Site photographs are provided in Attachment B.

3.3 Laboratory Analysis

The soil samples were labeled and placed into a cooler with ice following sampling. All samples were transferred under appropriate chain-of-custody documentation to McCampbell Analytical, Inc. of Pittsburg, California. Laboratory analytical documentation is provided in Attachment C. Soil samples collected during this investigation were analyzed for the following constituents:

- Organochlorine Pesticides (OCPs) by EPA Method 8081A
- Lead and Arsenic by EPA Method 6020

4.0 RESULTS AND CONCLUSIONS

4.1 Geology and Hydrogeology

Sediment encountered in each of the borings generally consisted of non-plastic, fine and dry, olive brown silt with gravel and non-plastic, fine, moist, black silt (Attachment A). Groundwater was not encountered in any of the borings.

4.2 Screening Levels

The analytical results were compared to the Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ESLs), San Francisco Bay Regional Water Quality Control Board, dated January, 2019 (Revision 2). Tier 1 ESLs reflect the lowest concentration that would not result in adverse impacts to human health under a residential land use scenario, ecological terrestrial exposures, and leaching to groundwater or surface water. The Tier 1 ESLs are considered to be conservative and under most circumstances, and within the limitations described in the ESL guidance document. The presence of a chemical at concentrations below the corresponding ESL can generally be assumed to not pose a significant threat to human health or the environment. Additional evaluation may be warranted where the chemical concentration exceeds the corresponding ESL or exceeds background concentrations for naturally-occurring elements (e.g., arsenic).

The results also include a comparison to the residential soil ESLs which are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

The results for the arsenic and lead analyses were also compared to the hazardous waste criteria levels for California. The comparison includes the levels at which the analysis of samples for Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP) may be run as part of the determination.

4.3 Soil Analytical Results

Organochlorine Pesticides

Relatively minor concentrations of residual OCPs, including DDT, DDE, DDD, and g-chlordane, were detected in soil samples analyzed during this investigation. The presence of these pesticides in shallow soil is consistent with the historical use of certain pesticides that may have been applied to the property. Of the OCPs detected, DDT and its related congeners DDD and DDE were detected in soil with the greatest frequency. DDT was detected in soil samples collected during this investigation at concentrations ranging from 0.0026 mg/kg (S-2) to 0.037 mg/kg (S-4). The DDT concentrations in all soil samples exceed the Tier 1 ESL (0.0011 mg/kg), but are below the Residential ESL (1.9 mg/kg). The remaining OCPs that were detected in soil were below both the Tier 1 and Residential ESLs. Based on the results of these analyses,

the concentrations of OCPs detected in shallow soil are below levels that would represent a significant threat to human health under a residential land use scenario.

Lead and Arsenic

Arsenic was detected in all soil samples collected at concentrations ranging from 4.5 mg/kg (S-4) to 6.4 mg/kg (S-2), while lead was detected at concentrations ranging from 4.9 mg/kg (S-4) to 8.3 mg/kg (S-1 and S-5). The concentrations of lead and arsenic detected in soil samples collected during this investigation were observed to be consistent with background concentrations of these naturally-occurring elements. While the concentrations of arsenic detected in soil exceed Tier 1 and Residential ESLs, the concentrations detected are consistent with background levels. Consequently, the presence of arsenic does not represent a significant finding or otherwise warrant additional consideration.

Soil Reuse and Disposal

It is ATC's opinion that excess soil generated during site grading would not be suitable for unrestricted use at other offsite locations. However, excess soil may be suitable for certain restricted uses, depending on the site location, land use, and offsite development details. In the event that a suitable restricted use site is not identified, excess soil generated during site grading may be used as daily cover or disposed at a licensed municipal solid waste or inert landfill. Additional soil sampling and analysis may be required before excess soil is relinquished for disposal at an offsite location. The number of soil samples and the laboratory analytical requirements may vary by disposal facility. ATC is available to support efforts related to the identification of suitable disposal facilities and complete any additional sampling and analysis required by the landfill as part of its waste acceptance criteria.

5.0 LIMITATIONS AND RELIANCE

This report was prepared in accordance with the scope of work outlined in ATC's contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the site. It was prepared for the exclusive use of the Client for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to ATC. To the extent this report is based on information provided to ATC by third parties, ATC may have made efforts to verify this third party information, but ATC cannot guarantee the completeness or accuracy of this third party information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties, expressed or implied are made by ATC.

ATC appreciates the opportunity to assist you on this project. If you have any questions or require additional information, please contact Bryan Campbell at 925-804-2858.

Respectfully submitted,
ATC Group Services LLC

Notes:

Chemicals included in the summary results reflect all constituents that were detected in at least one sample at a concentration in excess of the laboratory method detection limit.

- mg/kg Milligrams per Kilogram
- bgs Below Ground Surface
- ND Not Detected at concentrations in excess of laboratory reporting limits stated in official laboratory analytical report
- VOCs Volatile Organic Compounds
- OCPs Organochlorine Pesticides

- TTLC California Total Threshold Limit Concentration - State (Non-RCRA) hazardous waste criterion
- STLC California Soluble Threshold Limit Concentration - State (Non-RCRA) hazardous waste criterion
- TCLP Federal Toxicity Characteristic Leaching Procedure - Federal (RCRA) hazardous waste criterion
- Red** Result Exceeds "Run STLC if Above" Level
- <0.00010 Not detected at a concentration in excess of the laboratory reporting limit

ESLs: Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, Tier 1 ESL, 2019 (Revision 2).

^[1] - Tier 1 ESLs for soil reflect the lower of values that are protective of human health under a residential land use scenario, ecological terrestrial habitats, and leaching to groundwater and surface water. These values are intended to be protective of human health, potential ecological exposures, groundwater, and surface water resources under any land use scenario

^[2] - Residential soil ESLs are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

The ESL for g-chlordane is based on the value for chlordane.

- 300** Represents a detected concentration in excess of Tier 1 ESL, but equal to or less than the chemical-specific Residential Health-Based ESL
- 300** Represents a detected concentration in excess of the chemical-specific Tier 1 ESL and Residential Health-Based ESL

Arsenic occurs naturally in California soils at concentrations in excess of the Tier 1 ESA and health-based Residential ESLs. Therefore, soil data are typically compared to background concentrations for naturally-occurring elements. Background concentrations of arsenic in the San Ramon Area generally range from approximately 6 to 7 mg/kg (Smith, D.B., Cannon, W.F., Woodruff, L.G., Solano, Federico, and Ellefsen, K.J., 2014, Geochemical and mineralogical maps for soils of the conterminous United States: U.S. Geological Survey Open-File Report 2014-1082, 386 p., <https://dx.doi.org/10.3133/ofr20141082>).

Prepared by: Nancy Palacios

Comments:

NOTE: Soil samples are discarded 60 days after results are reported unless other arrangements are made (Water samples are 30 days).
Hazardous samples will be returned to client or disposed of at client expense.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

Comments:

September 16, 2019

Mr. David Fields
Executive Vice President
Sunset Development Company
2600 Camino Ramon, Suite 201
San Ramon, CA 94583

Subject: Subsurface Investigation
Bishop Ranch 3A, San Ramon, California
ATC Project Number: 118EM01202

Dear Mr. Fields:

ATC Group Services LLC (ATC) has prepared this report to document field activities and findings for the Subsurface Investigation for the above-referenced property for Sunset Development Company (herein referred to as the Client). This work was completed in accordance with our proposal (ATC Proposal 118-2019-0056).

1.0 SITE DESCRIPTION

The property consists of approximately 10.66 acres of primarily undeveloped land (Figures 1 and 2). A former contractor staging area is located on the northeast corner of the property. The property is located in an area that is primarily characterized by commercial development, undeveloped land, and a community center.

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Map Series, Diablo, California, Quadrangle Topographic Map, 2012, the property is located approximately 443 feet above mean sea level (MSL) and has a sloping topography towards the southeast (Figure 1). The nearest water body is the South San Ramon Creek which is located approximately 800 feet to the northeast of the property.

Based on the California Department of Conservation, California Geological Survey, Generalized Geologic Map of California Note 17, dated April 2002, the property is primarily underlain by Tertiary sedimentary rocks. Sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental). Tertiary sedimentary rocks include sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin.

According to information from a nearby environmental case located at 1090 Market Place and located approximately 450 feet to the east of the property, groundwater occurs between 6 and 14 feet below ground surface (bgs).

2.0 BACKGROUND

According to a Phase I Environmental Site Assessment (Phase I ESA) by ATC dated January 18, 2019, the property was historically utilized for agricultural purposes. Based on the historical agricultural usage of the property, pesticides and/or herbicides may have been utilized on the property and near-surface soils may have at one time contained these compounds; however, evidence of large scale pesticides and/or herbicides use, storage or mixing was not observed during review of historical sources.

ATC recommended that, if future development activities include soil disturbance such as grading or excavation, soil should be characterized for hazardous substances including herbicides/pesticides and petroleum hydrocarbons to address potential impact from prior agricultural use and temporary construction staging activities (minor spills of oily material). Any identified impacted soil removed from the property should be transported and disposed in accordance with applicable regulations. The preparation of a soil management plan, prior to soil disturbance such as grading or excavation, may be warranted.

ATC mobilized to the site on January 7, 2015 and collected shallow soil samples from twelve locations (B-1 through B-12) across the site as detailed in the Limited Phase II Environmental Assessment Report dated January 19, 2015. Borings B-1 through B-8 were advanced within or just outside of the fenced construction area and borings B-9 through B-12 were advanced within the remainder of the property. Based on results of the soil assessment, the only exceedance of the Environmental Screening Levels (ESLs) was for arsenic and total petroleum hydrocarbons in the motor oil range. Arsenic concentrations are not significantly above the ESL and the concentrations detected are consistent with background concentrations in the San Ramon area (Smith et. al., 2014). Additionally, Endosulfan II and Lindane were not reported above MDLs for one sample, but the MDLs exceeded the corresponding leaching to groundwater ESLs.

3.0 SCOPE OF WORK

ATC understands that the removal of approximately 5 feet of soil across the property is planned and that the Client has requested an investigation to better understand the locations and depths of the impacts to soil on the property. The scope of work below is designed as an initial investigation to provide the information requested. This work was performed under the oversight of a licensed professional geologist.

3.1 Pre-Field Activities

Prior to initiating field activities, ATC prepared a site specific Health and Safety Plan (HASP) for the site. The HASP complied with Title 29 of the Code of Federal Regulations (CFR) Section 1920.120(j), the California General Industry Safety Order (GISO) and Title 8, California Code of Regulations (CCR) Section 5192. A copy of the HASP was on-site during all field activities.

Drilling permits were obtained from Contra Costa County Environmental Health Department (CCCEHD) for this investigation (Attachment A).

The public underground utility locating service USA North was notified to identify public utilities in the work area. Private utility locating was conducted by GPRS of San Francisco, CA to identify underground utilities on the property.

3.2 Drilling and Soil Sampling Activities

On July 15 and 16, 2019, seventeen (17) soil borings were advanced on the property (Figure 2). The borings were advanced by Cascade Drilling of Richmond, California. The borings were advanced in a grid pattern with nine (9) of the borings (A-1 through A-9) advanced in the former contractor staging area which is an area of previous hydrocarbon impacts. Eight (8) of the borings (B-1 through B-8) advanced on the rest of the property. The borings were advanced using a hand-auger to a depth of 5 feet bgs.

Soil samples were collected at depths of 1, 3, and 5 feet bgs. The soil samples from 1 and 3 feet bgs were submitted for analysis and the samples from 5 feet bgs were placed on hold in the laboratory.

The borings were advanced and samples were collected at select intervals. Down-hole equipment was decontaminated using a triple rinse system containing detergent.

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples and the PID readings for each sample were included on the boring logs (Attachment B). Selected soil samples were collected into laboratory-supplied containers.

Following completion of sample collection and removal of tooling, the borings were backfilled with neat cement grout as required by the CCCEHD and completed at the surface to match the surrounding conditions. Investigation derived waste was left onsite in a drum. Site photographs are provided in Attachment C.

3.3 Laboratory Analysis

The soil samples were labeled and placed into a cooler with ice following sampling. All samples were transferred under appropriate chain-of-custody documentation to McCampbell Analytical, Inc. of Pittsburg, California. Laboratory analytical documentation is provided in Attachment D.

Laboratory analysis of the soil samples consisted of the following:

- TPH multi-range by EPA Method 8015
- Volatile Organic Compounds (VOCs) by EPA Method 8260
- Organochlorine Pesticides (OCPs) by EPA Method 8081A
- CAM 17 Metals by EPA Methods

4.0 RESULTS AND CONCLUSIONS

4.1 Geology and Hydrogeology

Sediment encountered in each of the borings generally consisted of silty clay with the appearance of layers of well-graded gravel and/or silt in the borings to 5 feet bgs, the maximum depth explored. Groundwater was not encountered in any of the borings.

4.2 Screening Levels

The analytical results were compared to the Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ESLs), San Francisco Bay Regional Water Quality Control Board, dated 2019 (Revision 2). Tier 1 ESLs reflect the lowest concentration that would not result in adverse impacts to human health under a residential land use scenario, ecological terrestrial exposures, and leaching to groundwater or surface water. The Tier 1 ESLs are considered to be conservative and under most circumstances, and within the limitations described in the ESL guidance document. The presence of a chemical at concentrations below the corresponding ESL can generally be assumed to not pose a significant threat to human health or the environment. Additional evaluation may be warranted where the chemical concentration exceeds the corresponding ESL or exceeds background concentrations for naturally-occurring elements (e.g., arsenic).

The results also include a comparison to the residential soil ESLs which are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

The results for the CAM 17 Metals analysis in soil were also compared to the hazardous waste criteria levels for California. The comparison includes the levels at which the analysis of samples for Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP) may be run as part of the determination.

4.3 Soil Analytical Results

Petroleum Hydrocarbons

Petroleum hydrocarbons within the diesel and oil ranges were detected in shallow soil samples obtained at various locations across the property. The origin of the surficial petroleum hydrocarbons is not known, but could be related to historical site use and/or tenant operations. While the presence of petroleum hydrocarbons in shallow soil would not result in the generation of hazardous waste, the presence of petroleum hydrocarbons could influence the disposal options for excess soil generated during future site grading or development activities.

The results of this assessment identified the presence of TPH as diesel and motor oil at concentrations in excess of the Tier 1 ESLs at depths of approximately 1 foot below grade within the grids containing borings A-5, A-8, B-3, B-4, and B-7. Neither TPH as diesel nor TPH as motor oil were detected at concentrations in excess of the Tier 1 ESL in any samples collected at depths of approximately 3 feet below grade. Given the nature of these occurrences, it is reasonable to conclude that TPH impacted soil is limited to the upper 3 feet of soil. Since the proposed rough grade would extend to a depth of approximately 5 feet below grade, the grading plane would encompass all soil containing TPH at concentrations in excess of Tier 1 ESLs.

Organochlorine Pesticides

Residual OCPs including DDT, DDE, and DDE; dieldrin; chlordane; and endosulfan were detected in soil samples analyzed during this investigation. The presence of these pesticides in shallow soil is consistent with the historical use of certain pesticides that may have been applied to the property. Of the OCPs detected, DDT and its related congeners DDD and DDE were detected in soil with the greatest frequency. The concentrations of OCPs detected in soil are below levels that would represent a significant threat to human health under a residential land use scenario.

The concentration of DDE detected in soil sample B-6 at 3 feet (1.5 mg/kg) exceeds the California TLC limit of 1.0 mg/kg. Soil removed from this location and intended for offsite disposal would be considered a California (non-RCRA) hazardous waste. Given that the vertical extent of OCPs at this location was not fully defined, ATC recommends additional vertical and lateral definition in this area to more definitively define the limits of soil that may warrant management and disposal as hazardous waste. Once the extent of DDE impacted soil in the vicinity of boring B-6 is defined, this soil should be removed and disposed of in accordance with applicable standards.

Metals

The concentrations of metals detected in soil samples collected during this investigation were observed to be consistent with background concentrations of these naturally-occurring elements. Arsenic and vanadium were detected in all soil samples collected at concentrations in excess of the Tier 1 ESLs and arsenic was detected in all soil samples at concentrations in excess of the health-based ESL for residential land use. Given that the concentrations of arsenic and other metals are consistent with background levels for these metals in California soils, it does not appear that soil removed during future site grading or development would require consideration of special soil management or disposal alternatives. However, additional soil sampling and analysis would likely be required before soil is transported offsite.

Soil Reuse and Disposal

It is ATC's opinion that excess soil generated during site grading would not be suitable for unrestricted use at other locations and should be disposed at a licensed municipal solid waste or inert landfill. Additional soil sampling and analysis may be required before excess soil is relinquished for disposal at an offsite location. The number of soil samples and the laboratory analytical requirements may vary by disposal facility. ATC is available to support efforts related to the identification of suitable disposal facilities and

complete any additional sampling and analysis required by the landfill as part of its waste acceptance criteria.

5.0 LIMITATIONS AND RELIANCE

This report was prepared in accordance with the scope of work outlined in ATC's contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the site. It was prepared for the exclusive use of the Client for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to ATC. To the extent this report is based on information provided to ATC by third parties, ATC may have made efforts to verify this third party information, but ATC cannot guarantee the completeness or accuracy of this third party information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties, expressed or implied are made by ATC.

ATC appreciates the opportunity to assist you on this project. If you have any questions or require additional information, please contact Bryan Campbell at 925-804-2858.

Respectfully submitted,
ATC Group Services LLC

Notes:

Chemicals included in the summary results reflect all constituents that were detected in at least one sample at a concentration in excess of the laboratory method detection limit.

- mg/kg Milligrams per Kilogram
- bgs Below Ground Surface
- ND Not Detected at laboratory method detection limits stated in official laboratory analytical report
- <1.0 Constituent not detected at a concentration in excess of the laboratory method detection limit
- J "J" Flagged value. Represents an estimated concentration between the laboratory method detection limit and the laboratory reporting limit.
- TPH Total Petroleum Hydrocarbons
- VOCs Volatile Organic Compounds
- OC Organochlorine

- TTLIC California Total Threshold Limit Concentration - State hazardous waste criterion
- STLC California Soluble Threshold Limit Concentration - State hazardous waste criterion
- TCLP Federal Toxicity Characteristic Leaching Procedure - Federal hazardous waste criterion
- Red Result Exceeds "Run STLC if Above" Level

ESLs: Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, Tier 1 ESL, 2019 (Revision 2).

^[1] - Tier 1 ESLs for soil reflect the lower of values that are protective of human health under a residential land use scenario, ecological terrestrial habitats, and leaching to groundwater and surface water. These values are intended to be protective of human health, potential ecological exposures, groundwater, and surface water resources under any land use scenario

^[2] - Residential soil ESLs are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

ESLs for cis- and trans-chlordane are based on the values for chlordane. ESLs for Endosulfan I, Endosulfan II, and Endosulfan Sulfate based on values for Endosulfan.

- 300** Represents a detected concentration in excess of Tier 1 ESL, but equal to or less than the chemical-specific Residential Health-Based ESL
- 300** Represents a detected concentration in excess of the chemical-specific Tier 1 ESL and Residential Health-Based ESL

ND Not Detected at laboratory method detection limits stated in official laboratory analytical report
<1.0 Constituent not detected at a concentration in excess of the laboratory method detection limit
J "J" Flagged value. Represents an estimated concentration between the laboratory method detection limit and the laboratory reporting limit.

TTLC California Total Threshold Limit Concentration - State hazardous waste criterion
STLC California Soluble Threshold Limit Concentration - State hazardous waste criterion
TCLP Federal Toxicity Characteristic Leaching Procedure - Federal hazardous waste criterion
Red Result Exceeds "Run STLC if Above" Level

ESLs: Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, Tier 1 ESL, 2019 (Revision 2).

^[1] - Tier 1 ESLs for soil reflect the lower of values that are protective of human health under a residential land use scenario, ecological terrestrial habitats, and leaching to groundwater and surface water. These values are intended to be protective of human health, potential ecological exposures, groundwater, and surface water resources under any land use scenario

^[2] - Residential soil ESLs are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

300 Represents a detected concentration in excess of Tier 1 ESL, but equal to or less than the chemical-specific Residential Health-Based ESL and background levels for naturally-occurring elements
300 Represents a detected concentration in excess of the chemical-specific Tier 1 ESL and Residential Health-Based ESL

Arsenic occurs naturally in California soils at concentrations in excess of the Tier 1 ESA and health-based Residential ESLs. Therefore, soil data are typically compared to background concentrations for naturally-occurring elements. Background concentrations of arsenic in the San Ramon Area generally range from approximately 6 to 7 mg/kg (Smith, D.B., Cannon, W.F., Woodruff, L.G., Solano, Federico, and Ellefsen, K.J., 2014, Geochemical and mineralogical maps for soils of the conterminous United States: U.S. Geological Survey Open-File Report 2014-1082, 386 p., <https://dx.doi.org/10.3133/ofr20141082>).

Drilling Permit

**CONTRA COSTA
ENVIRONMENTAL HEALTH DIVISION**
2120 DIAMOND BLVD. SUITE 200. CONCORD, CA 94520-5704
(925) 692-2500 FAX (925) 692-2502 www.cchealth.org/eh/

Soil Boring Permit

Permit Number: 0026074 PE Number: 4301
Date Received: July 03, 2019 WP Number: WP0026074

Issued By: KAREEM MOHSEN Date Issued: 11-Jul-2019 Date Expires: 12-Jan-2020

| | |
|---------------------------|-------------------------------------|
| Intended Use: SOIL BORING | # of Borings or Well ID: 17 BORINGS |
|---------------------------|-------------------------------------|

The issuance of this permit by Contra Costa County Environmental Health Division does not guarantee a satisfactory and an indefinite operation of any well. Permit expires in 180 calendar days from date of approval. Permits are non-transferable, and can be suspended or revoked. If more time is required for the project, a time extension may be granted if reasons warrant it in writing.

Project Site Information

Site Address: CAMINO RAMON (6200 BOLLINGER CANYON RD.), SAN RAMON
APN: 213 133 098 Lot/Parcel #: _____

Prior to any drilling construction or destruction of a well, requests for inspection appointment must be received 48 hours in advance (excluding weekends, holidays, and Mandatory County Furlough Days) by faxing your written request to (925) 692-2502 or e-mail to ehlu@cchealth.org. Voice mail messages are not acceptable.

Well drillers must possess a valid C-57 license and must have on file a performance bond of \$5,000.00 with Contra Costa County before commencing with any well construction, destruction or repairs.

Soil Boring Permit Conditions:

1. Soil Boring shall be destroyed pursuant to County regulations within 30 days of completing monitoring activities.
2. _____
3. _____

Final Approval by: _____ Date: _____

Job ID: 720-94040-1

Qualifiers

GC/MS VOA

| Qualifier | Qualifier Description |
|-----------|--|
| * | RPD of the LCS and LCSD exceeds the control limits |
| * | ISTD response or retention time outside acceptable limits |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |
| F2 | MS/MSD RPD exceeds control limits |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

GC Semi VOA

| Qualifier | Qualifier Description |
|-----------|---|
| B | Compound was found in the blank and sample. |
| D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| X | Surrogate is outside control limits |

Metals

| Qualifier | Qualifier Description |
|-----------|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| B | Compound was found in the blank and sample. |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |
| F2 | MS/MSD RPD exceeds control limits |
| F4 | MS/MSD RPD exceeds control limits due to sample size difference. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| α | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

Comments

The 8081A results will be reported in a second report.

Receipt

The samples were received on 7/16/2019 1:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.5° C and 5.0° C.

GC/MS VOA

Method(s) 8260B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for batch analytical batch 720-269532 recovered outside control limits for the following analytes: 2-Butanone (MEK).

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 720-269513 and 720-269513 and analytical batch 720-269548 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 720-269816 and analytical batch 720-269799 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method(s) 8260B: Internal standard (ISTD) response for the following samples were outside control limits: B-3, 1' (720-94040-34), (720-94040-A-34-G MS) and (720-94040-A-34-H MSD). The sample(s) was re-extracted and/or re-analyzed with concurring results, and the second set of data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8015B: The following samples required a dilution due to the nature of the sample matrix: B-7, 1' (720-94040-46). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8015B: The following samples required a dilution due to the nature of the sample matrix: B-3, 1' (720-94040-34) and B-4, 1' (720-94040-37). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8015B: The following samples required a dilution due to the nature of the sample matrix: A-5, 1' (720-94040-13), A-6, 1' (720-94040-16) and A-8, 1' (720-94040-22). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method(s) 8015B: The method blank for preparation batch 720-269537 and analytical batch 720-269649 contained Diesel Range Organics [C10-C28] above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 720-269606 and analytical batch 720-269792 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010B: The post digestion spike % recovery for Barium associated with batch 720-269792 was outside of control limits. The following sample is impacted: (720-94040-A-31-F PDS).

Case Narrative

Client: ATC Group Services LLC.
Project/Site: Sunset Development

Job ID: 720-94040-1

Job ID: 720-94040-1 (Continued)

Laboratory: Eurofins TestAmerica, Pleasanton (Continued)

Method(s) 6010B: The serial dilution performed for the following sample associated with batch 720-269792 was outside control limits for Barium, Cobalt, Chromium, Nickel and Vanadium: (720-94040-A-31-F SD).

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: B-2, 1' (720-94040-31). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The method blank for preparation batch 720-269525 and analytical batch 720-269837 contained Chromium above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method(s) 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 720-269525 and analytical batch 720-269837 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method(s) 6010B: The post digestion spike % recovery for Barium-134% associated with batch 720-269837 was outside of control limits. The following sample is impacted: (720-94040-A-1-D PDS ^4).

Method(s) 6010B: The serial dilution performed for the following sample associated with batch 720-269837 was outside control limits for Barium, Cobalt, Chromium, Nickel, and Vanadium: (720-94040-A-1-D SD ^20).

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23), A-9, 1' (720-94040-25), A-9, 3' (720-94040-26), B-1, 1' (720-94040-28), B-1, 3' (720-94040-29), (720-94040-A-1-B MS ^4), (720-94040-A-1-C MSD ^4), (720-94040-A-1-D PDS ^4) and (720-94040-A-1-D SD ^20). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: B-5, 1' (720-94040-40), B-5, 3' (720-94040-41), B-6, 1' (720-94040-43), B-6, 3' (720-94040-44), B-7, 1' (720-94040-46), B-7, 3' (720-94040-47), B-8, 1' (720-94040-49) and B-8, 3' (720-94040-50). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23), A-9, 1' (720-94040-25), A-9, 3' (720-94040-26), B-1, 1' (720-94040-28), B-1, 3' (720-94040-29), (720-94040-A-1-B MS), (720-94040-A-1-C MSD), (720-94040-A-1-D PDS) and (720-94040-A-1-D SD). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The following samples were diluted due to the abundance of non-target analytes: B-2, 3' (720-94040-32), B-3, 1' (720-94040-34), B-3, 3' (720-94040-35), B-4, 1' (720-94040-37), B-4, 3' (720-94040-38), B-5, 1' (720-94040-40), B-5, 3' (720-94040-41), B-6, 1' (720-94040-43), B-6, 3' (720-94040-44), B-7, 1' (720-94040-46), B-7, 3' (720-94040-47), B-8, 1' (720-94040-49) and B-8, 3' (720-94040-50). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3546: 3546 8015B DRO: Due to the matrix, the following sample could not be concentrated to the final method required volume of 2 mL: B-3, 1' (720-94040-34), B-4, 1' (720-94040-37) and B-7, 1' (720-94040-46). The reporting limits (RLs) are elevated proportionately. The sample final volume was 5 mL.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: ATC Group Services LLC.
Project/Site: Sunset Development

Job ID: 720-94040-1

Laboratory: Eurofins TestAmerica, Pleasanton

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority | Program | EPA Region | Identification Number | Expiration Date |
|------------|---------------|------------|-----------------------|-----------------|
| California | State Program | 9 | 2496 | 01-31-20 |

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

| Analysis Method | Prep Method | Matrix | Analyte |

Job ID: 720-94040-2

Qualifiers

GC Semi VOA

| Qualifier | Qualifier Description |
|-----------|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| D | Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D. |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |
| F2 | MS/MSD RPD exceeds control limits |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| p | The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported. |
| X | Surrogate is outside control limits |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| α | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

Comments

No additional comments.

Receipt

The samples were received on 7/16/2019 1:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.5° C and 5.0° C.

GC Semi VOA

Method(s) 8081A: The continuing calibration verification (CCV) associated with batch 286268 recovered above the upper control limit for Toxaphene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following samples are impacted: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23) and (CCV 180-286268/2).

Method(s) 8081A: The following samples were diluted due to the nature of the sample matrix: A-1, 1' (720-94040-1), A-1, 3' (720-94040-2), A-2, 1' (720-94040-4), A-2, 3' (720-94040-5), A-3, 1' (720-94040-7), A-3, 3' (720-94040-8), A-4, 1' (720-94040-10), A-4, 3' (720-94040-11), A-5, 1' (720-94040-13), A-5, 3' (720-94040-14), A-6, 1' (720-94040-16), A-6, 3' (720-94040-17), A-7, 1' (720-94040-19), A-7, 3' (720-94040-20), A-8, 1' (720-94040-22), A-8, 3' (720-94040-23), A-9, 1' (720-94040-25), A-9, 3' (720-94040-26), B-1, 1' (720-94040-28), B-1, 3' (720-94040-29), B-2, 1' (720-94040-31), B-2, 3' (720-94040-32), B-3, 1' (720-94040-34), B-3, 3' (720-94040-35), B-4, 1' (720-94040-37), B-4, 3' (720-94040-38), B-5, 1' (720-94040-40), B-5, 3' (720-94040-41), B-6, 1' (720-94040-43), B-6, 3' (720-94040-44), B-7, 1' (720-94040-46), B-7, 3' (720-94040-47), B-8, 1' (720-94040-49), B-8, 3' (720-94040-50), (720-94040-B-16-A MS), (720-94040-B-16-B MSD), (720-94040-B-31-A MS) and (720-94040-B-31-B MSD). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

| Question | Answer | Comment |
|--|--------|---------|
| Radioactivity wasn't checked or is </= background as measured by a survey meter. | N/A | |
| The cooler's custody seal, if present, is intact. | N/A | |
| Sample custody seals, if present, are intact. | N/A | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | True | |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the containers received and the COC. | True | |
| Samples are received within Holding Time (excluding tests with immediate HTs) | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified. | N/A | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| Multiphasic samples are not present. | True | |
| Samples do not require splitting or compositing. | True | |
| Residual Chlorine Checked. | N/A | |
