EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Technical Supervisor:  6/30/2016
 Gamini Ranatunga, Ph.D. Date Reported

NVLAP Lab Code 101872-0. CA ELAP Certification #1037. Analyses use Polarized Light Microscopy (PLM), Micro Analytical SOP PLM-101. Basic techniques follow the EPA Interim Method for Bulk Insulation Samples (1982), and EPA-600/R93-116 (1993). The 1993 method covers all types of bulk materials and is based on the 1982 Method, with improved analytical techniques for layered samples as required for NESHAP compliance. Asbestos is quantified by calibrated visual estimation. Detection limit is material dependent. Detection of asbestos traces (much less than 1%) may not be reliable or reproducible by PLM. Weight % cannot be determined by PLM. Asbestos with diameter below ~1 µm may not be detected by PLM. Absence of asbestos in dust, debris, and some compact materials, including floor tiles, cannot be conclusively established by PLM, and should be confirmed by Transmission Electron Microscopy (TEM). Interferences may prevent detection of small asbestos fibers, and hinder determination of some optical properties. Tremolite-asbestos or actinolite-asbestos may be indistinguishable by PLM from some similar, non-regulated amphiboles (e.g. the "Libby Amphiboles" richterite and winchite), and should be confirmed by TEM. The lower quantitation limit (reporting limit) of PLM estimation is 1%. The Cal-OSHA definition of asbestos-containing construction material is 0.1% asbestos; however, reliable determination of asbestos percent at this level cannot be done by PLM estimation; PLM Point Counting or TEM weight percent analysis are recommended. Only dominant non-asbestos materials (fibrous and non-fibrous) are listed. This analysis shall not be construed as conclusive for the presence of any reported materials other than asbestos, or for the absence of any non-asbestos material. Common interferences include, but are not limited to: cellulose, fibrous glass, other man-made vitreous fibers, synthetic fibers, elongate fragments of calcium sulfate, talc, wollastonite, animal hair, and other miscellaneous elongate particles. Sample heterogeneity is indicated by listing more than one distinct layer or material on the report. If more than one distinct sample is received in the same container, samples shall be marked with letters and analyzed separately. Layers within a sample are analyzed separately when feasible; if asbestos is detected, percentages are reported for individual layers. Interlayer contamination is possible among any layers in a sample. The notation ND (or "NONE DETECTED") indicates a result of "NO ASBESTOS DETECTED" in a homogeneous sample, or in all layers of a heterogeneous sample. Composite asbestos percentages from multiple layers are applicable only to wallboard / joint compound systems; compositing is based on customers' descriptions of material as "joint compound". Customers are solely responsible for identification and description of bulk materials listed on field forms. Laboratory descriptions may differ from those given by customers. Quality Control (QC): all results have been determined to be within acceptance limits prior to reporting. Reanalyzed samples are denoted by two sets of analyst initials. Unless otherwise stated herein, all samples were received in acceptable condition for analysis. This report must not be used to claim product endorsement by NIST or any U.S. Government agency. This report shall not be reproduced except in full, without the approval of Micro Analytical Laboratories, Inc., and pertains only to the samples analyzed. NFM = Non-fibrous materials.

Absence of asbestos in dust, debris, and some compact materials, including floor tiles, cannot be conclusively established by PLM, and should be confirmed by Transmission Electron Microscopy (TEM). Interferences may prevent detection of small asbestos fibers, and hinder determination of some optical properties. Tremolite-asbestos or actinolite-asbestos may be indistinguishable by PLM from some similar, non-regulated amphiboles (e.g. the "Libby Amphiboles" richterite and winchite), and should be confirmed by TEM. The lower quantitation limit (reporting limit) of PLM estimation is 1%. The Cal-OSHA definition of asbestos-containing construction material is 0.1% asbestos; however, reliable determination of asbestos percent at this level cannot be done by PLM estimation; PLM Point Counting or TEM weight percent analysis are recommended. Only dominant non-asbestos materials (fibrous and non-fibrous) are listed. This analysis shall not be construed as conclusive for the presence of any reported materials other than asbestos, or for the absence of any non-asbestos material. Common interferences include, but are not limited to: cellulose, fibrous glass, other man-made vitreous fibers, synthetic fibers, elongate fragments of calcium sulfate, talc, wollastonite, animal hair, and other miscellaneous elongate particles. Sample heterogeneity is indicated by listing more than one distinct layer or material on the report. If more than one distinct sample is received in the same container, samples shall be marked with letters and analyzed separately. Layers within a sample are analyzed separately when feasible; if asbestos is detected, percentages are reported for individual layers. Interlayer contamination is possible among any layers in a sample. The notation ND (or "NONE DETECTED") indicates a result of "NO ASBESTOS DETECTED" in a homogeneous sample, or in all layers of a heterogeneous sample. Composite asbestos percentages from multiple layers are applicable only to wallboard / joint compound systems; compositing is based on customers' descriptions of material as "joint compound". Customers are solely responsible for identification and description of bulk materials listed on field forms. Laboratory descriptions may differ from those given by customers. Quality Control (QC): all results have been determined to be within acceptance limits prior to reporting. Reanalyzed samples are denoted by two sets of analyst initials. Unless otherwise stated herein, all samples were received in acceptable condition for analysis. This report must not be used to claim product endorsement by NIST or any U.S. Government agency. This report shall not be reproduced except in full, without the approval of Micro Analytical Laboratories, Inc., and pertains only to the samples analyzed. NFM = Non-fibrous materials.

Date Reported

NVLAP Lab Code 101872-0. CA ELAP Certification #1037. Analyses use Polarized Light Microscopy (PLM). Micro Analytical SOP PLM-101. Basic techniques follow the EPA Interim Method for Bulk Insulation Samples (1982), and EPA-600/R93-116 (1993). The 1993 method covers all types of bulk materials and is based on the 1982 Method, with improved analytical techniques for layered samples as required for NESHAP compliance. Asbestos is quantified by calibrated visual estimation. Detection limit is material dependent. Detection of asbestos traces (much less than 1%) may not be reliable or reproducible by PLM. Weight % cannot be determined by PLM. Asbestos with diameter below ~1 µm may not be detected by PLM. Absence of asbestos in dust, debris, and some compact materials, including floor tiles, cannot be conclusively established by PLM, and should be confirmed by Transmission Electron Microscopy (TEM). Interferences may prevent detection of small asbestos fibers, and hinder determination of some optical properties. Tremolite-asbestos or actinolite-asbestos may be indistinguishable by PLM from some similar, non-regulated amphiboles (e.g. the "Libby Amphiboles" richterite and winchite), and should be confirmed by TEM. The lower quantitation limit (reporting limit) of PLM estimation is 1%. The Cal-OSHA definition of asbestos-containing construction material is 0.1% asbestos; however, reliable determination of asbestos percent at this level cannot be done by PLM estimation; PLM Point Counting or TEM weight percent analysis are recommended. Only dominant non-asbestos materials (fibrous and non-fibrous) are listed. This analysis shall not be construed as conclusive for the presence of any reported materials other than asbestos, or for the absence of any non-asbestos material. Common interferences include, but are not limited to: cellulose, fibrous glass, other man-made vitreous fibers, synthetic fibers, elongate fragments of calcium sulfate, talc, wollastonite, animal hair, and other miscellaneous elongate particles. Sample heterogeneity is indicated by listing more than one distinct layer or material on the report. If more than one distinct sample is received in the same container, samples shall be marked with letters and analyzed separately. Layers within a sample are analyzed separately when feasible; if asbestos is detected, percentages are reported for individual layers. Interlayer contamination is possible among any layers in a sample. The notation ND (or "NONE DETECTED") indicates a result of "NO ASBESTOS DETECTED" in a homogeneous sample, or in all layers of a heterogeneous sample. Composite asbestos percentages from multiple layers are applicable only to wallboard / joint compound systems; compositing is based on customers' descriptions of material as "joint compound". Customers are solely responsible for identification and description of bulk materials listed on field forms. Laboratory descriptions may differ from those given by customers. Quality Control (QC): all results have been determined to be within acceptance limits prior to reporting. Reanalyzed samples are denoted by two sets of analyst initials. Unless otherwise stated herein, all samples were received in acceptable condition for analysis. This report must not be used to claim product endorsement by NIST or any U.S. Government agency. This report shall not be reproduced except in full, without the approval of Micro Analytical Laboratories, Inc., and pertains only to the samples analyzed. NFM = Non-fibrous materials.

Wil Bailey
Sunset Development Company
2600 Camino Ramon, Suite 201
San Ramon CA, 94583

Subject: Proposal for Asbestos Inspection, Specifications, Clearance Testing and Waste Characterization for Bishop Ranch, 2600 Camino Ramon located in San Ramon CA, 94583

Mr. Bailey:

Patriot Environmental Laboratory Services, Inc. (Patriot) is pleased to submit the following proposal for the Asbestos Inspection, Abatement Specifications, Clearance Testing, and Waste Characterization Service at the above referenced property.

PROJECT DETAILS

- The building to be inspected consists of a four (4) story, 150,000sf commercial office structure (East Wing – Interior only).
- It is Patriot's understanding that the subject structures are currently unoccupied and **complete access will be provided.**
- Patriot understands that a previous survey of the 4th floor was conducted by another consultant and Sunset Development Company would like to incorporate the existing data into a complete survey, encompassing all 4 floors; and to provide abatement specifications for asbestos-containing and lead-based paint containing materials, as well as clearance testing following abatement activities and waste characterization for lead-containing ceramic tile.
- It has been conveyed to Patriot that the intent of the service(s) requested will be to address the interior 1st, 2nd, and 3rd floors of the subject structure's East wing scheduled for renovation.

SCOPE OF WORK

- Patriot agrees to provide all labor, material, and equipment required to prepare, process and complete the following services:

Asbestos Inspection

The asbestos inspection scope of work shall include:

1. Adequate staffing of fully qualified technicians to perform all tasks described in our scope of work in accordance with Federal, State, and local regulations.
2. Visual survey and identification of suspected asbestos containing materials (ACM) within the interior of the building (East wing only).
3. Review and validate existing asbestos survey data.
4. Collection of material samples suspected of containing asbestos.
5. Analysis of suspect asbestos building materials using Polarized Light Microscopy to determine the presence, type, and percentage of asbestos containing material in a NVLAP accredited laboratory facility.
6. Development and delivery of a written report.

Note: Patriot will perform limited destructive sampling, which will be necessary to extract the physical samples for analysis. All reasonable care will be taken to be as careful and discreet as possible in doing so. We will follow the normal industry standards in the performance of these activities. Patriot will not be responsible for any damage to the paint, ceramic tiles, or building materials and will not repair the areas where the samples were taken.

Asbestos Clearance Testing (PCM)

The Asbestos Abatement Monitoring scope of work shall include:

1. Adequate staffing of fully qualified technicians to perform all tasks described in our scope of work.
2. The inspector will inspect the contained work areas/containments for cleanliness and completion of the reported abatement activity.
3. Provide Asbestos PCM Air Sampling utilizing California Certified Asbestos or Site Surveillance Technicians for the completed abatement work in the contained work area(s) at the subject site.
4. Upon completion of the asbestos clearance sampling, a NIOSH 582 equivalent trained analyst will analyze the PCM asbestos clearance samples a verbally report the findings to all authorized individuals.
5. Submit written report of findings.

Lead-based Paint Clearance Sampling

The lead-based paint clearance sampling scope of work shall include:

1. All work will be performed by a California Department of Public Health Certified Lead Inspector/Assessor, Project Monitor or Sampler.
2. The inspector will inspect the requested work area for cleanliness and completion of the reported abatement activity.
3. The inspector will collect dust wipe samples from horizontal surfaces in proximity to the reported lead abatement activity.
4. Analysis of dust wipe samples using Atomic Absorption Spectrometry in an ELAP accredited laboratory facility.
5. Develop and deliver final report in compliance.

Lead-based Paint Waste Characterization Service

The Lead-based Paint Waste Characterization Service scope of work shall include:

1. All work will be performed by a California Department of Public Health Certified Lead Inspector/Assessor or Sampler.
2. Collection of lead abatement waste streams as specified by the client that are anticipated to be produced by the lead-based paint abatement, renovation or demolition activities performed at the subject property.
3. Analysis of all lead-based paint waste stream samples for determination of TTLC (Total Threshold Limit Concentration), STLC (Soluble Threshold Limit Concentration) and TCLP (Toxicity Characteristic Leaching Procedure) values in an ELAP accredited laboratory facility.
4. Production and issuance of laboratory analysis report.

FEE SCHEDULE

| | |
|---|--------|
| Asbestos Survey & Written Report (includes lab fees) | \$1250 |
| Asbestos Abatement Specifications | \$650 |
| Lead-Based Paint (Ceramic Tile) Abatement Specifications | \$650 |
| Asbestos Clearance Testing (\$300 per containment-Est 12 containments) | \$3600 |
| Lead-Based Paint Clearance Sampling (\$150 per containment-16 containments) | \$2400 |
| Lead-Based Paint Waste Characterization Service | \$395 |

Total Fee: **\$8,945**

Payment is due within (30) thirty days of the invoice date. Payment to Patriot shall not be based on when Customer receives payment from its Customer. In any action to enforce collection of past due invoices or any other legal action arising out of the Proposal Document, the Customer shall pay for all of the costs, collection agency fees, expenses, and reasonable attorney's fees incurred by Patriot and/or its agents.

Complete and total access must be provided to Patriot on the scheduled day(s) of the service.

Patriot will begin work on the project upon receiving your written authorization to proceed. Please sign the included Approval and Acceptance section and return all pages to our office. Patriot appreciates the opportunity to provide this proposal and looks forward to working with Sunset Development Company.

Sincerely,
Patriot Environmental Laboratory Services, Inc.

Mike Schoedinger
San Jose Branch Manager

APPROVAL AND ACCEPTANCE
July 7, 2016

The signature of a duly authorized representative of Sunset Development Company acknowledges approval and acceptance to pay in accordance with the fee schedule referenced

above to conduct the asbestos survey, specifications development, clearance testing, and waste characterization.

**ADDENDUM NO. 1
TO SERVICE
AGREEMENT**

Project Name: Central Facilities North and East Fan Rooms
Cleaning at 2600 Camino Ramon

Requested By: Jeff Finazzo

Date: October 2, 2015

Contractor: Restoration Management Company

The Agreement dated August 1, 2014 between Restoration Management Company and Sunset Development Company is hereby amended per Exhibit A, B and C attached.

MANAGER

(Signature)

**HAROUT HAGOPIAN
SENIOR VICE PRESIDENT AND
GENERAL MANAGER**

SUNSET DEVELOPMENT COMPANY

Date: _____

CONTRACTOR

(Signature)

Bob Aitken - Manager

(Name and Title)

Date: 10-13-15

EXHIBIT A
SCOPE OF WORK

The scope of work was developed and proposed under proposal dated September 29, 2015 under the recommendations from SCA Environmental, both attached hereto as Exhibit C, for the clean-up of fans, fan rooms and plenum rooms for the East and the Central Facilities North Fan rooms.

Clarifications:

1. Work to be performed after hours with the staff hours indicated on the proposal.
2. Manager will contract with Sheet Metal contractor to open access doors in fan units for Contractor to gain access for interior cleaning and coordinate such with Contractor.
3. Without access, some areas of fan units may not be accessible and cleaning will be to the best that can be done and sprayed with antimicrobial agent. Contractor will identify such areas to Manager.
4. Any replacement of duct insulation or wall insulation, if required, will be reported to Manager. Cost for such is not included in this Addendum.

Contractor will coordinate all scheduling and access to Project, in advance, with Manager.

Any modification to the scope of work, scheduling and fee requires prior written approval by Manager.

EXHIBIT B

SCHEDULE OF PAYMENTS AND BILLING

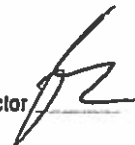

FEES

The fee to provide the services detailed under the scope of work listed in Exhibit A is fixed, all-inclusive cost as follows:

| | |
|-----------------------------------|--------------------|
| East Fan Room 100 | \$27,780.62 |
| Central Facilities North Fan Room | <u>\$19,437.20</u> |
| Total: | \$47,217.82 |

East Fan Room 100

| DESCRIPTION | QTY | REMOVE | REPLACE | TAX | TOTAL |
|-------------|-----|--------|---------|-----|-------|
|-------------|-----|--------|---------|-----|-------|

This estimate is for the cleaning of the Fan rooms and Plenum rooms as discussed during walk through with Jeff Finazzo, Harout Hagopian and SCA Environmental. As discussed not all areas are being cleaned and the cooling coils are being cleaned by others. Clearance criteria has not yet been established, so any additional work that may be required to obtain clearance if needed will be billed on a time and material basis (if required).

This estimate does not include any replacement of duct insulation or wall insulation if required. It is possible that appearance of wall/ceiling insulation may be changed during cleaning process and encapsulation. As discussed some grills or covers on fan units may not be cleanable and as discussed might be replaced by Bishop Ranch HVAC contractor.

Per discussion Bishop Ranch would contract with Sheet Metal contractor to open access doors in fan units to gain access for interior cleaning. Without access doors it will not be possible to clean interior of fan units. Some areas of fan units may not be accessible and will be cleaned to the best of our ability and sprayed with antimicrobial agent.

| | | | | | |
|---|---------|------|-------|------|--------|
| Anti-Microbial / Disinfectant / Sanitizer | 4.00 GL | 0.00 | 69.50 | 0.00 | 278.00 |

Some areas of fan units may not be accessible and will be cleaned to the best of our ability and sprayed with antimicrobial agent.

Friday Evening

9 workers and 1 supervisor for 6 hours each to set up containments, establish negative air in fan room and start disassembling components to prepare for cleaning.

| | | | | | |
|--------------------------------------|----------|------|-------|------|----------|
| General Labor - after hours | 54.00 HR | 0.00 | 49.50 | 0.00 | 2,673.00 |
| Restoration Supervisor - after hours | 9.00 HR | 0.00 | 91.50 | 0.00 | 823.50 |

Saturday

11 workers and 1 supervisor for 12 hours each to clean fan units (inside and out) as accessible. clean entire fan room by hepa vacuuming and wet wipe using an antimicrobial cleaning agent. Clean plenum room insulation by hepa vacuuming, wiping metal walls and cleaning concrete floor with antimicrobial cleaning agent.

| | | | | | |
|--------------------------------------|-----------|------|-------|------|----------|
| General Labor - after hours | 132.00 HR | 0.00 | 49.50 | 0.00 | 6,534.00 |
| Restoration Supervisor - after hours | 12.00 HR | 0.00 | 91.50 | 0.00 | 1,098.00 |

Sunday

11 workers and 1 supervisor for 8 hours each to encapsulate all fiberglass wall insulation with antimicrobial sealant (IAQ600 clear sealant) do final wipe down of surfaces to prepare for post clean up testing and take down all containments so fans can be turned back on. Clearance criteria has not yet been established, if crews have to wait on site for clearances there may be additional hours needed.

| | | | | | |

Comments/Detailed Description of Conditions:
 Restoration Management Company mobilized on site as they scheduled and set up negative pressurized containment at room BC160 fan system 800. SCA conducted inspection of the containment verified that the containment has adequate negative pressure.
 FMB was scheduled to come in 7pm to cut out access panels on fan housings.

Comments/Detailed Description of Conditions:
 Restoration Management Company was on site to clean in room BC160 fan system 800. SCA conducted periodic visual inspection of the progress and verified the visual mold has been cleaned.
 RMC sprayed disinfectant and encapsulated the areas at the end of the shift. Dehumidifiers were set up to run overnight. SCA will be back on site tomorrow morning to take air samples.

Status PASSED

Testing Method Spore Trap

COMMENTS (select, and enter date)

The East 100 Fan Room work area passed the semi-aggressive air testing and can be released for typ. reoccupancy.

Average total fungal spores levels inside the work area was 1338 ; outside was 3,800. Average cladosporium levels inside was 575 , statistically equivalent to 530 measured outside. (All values are in Counts/m³, as shown below.)

Low and inconsequential levels of 2 groups of fungal spores ("Other brown" & "Smut, etc.") were higher inside than outside - these low levels, altho' higher inside, account for only <3% of the interior, and only <2 % of the exterior.

| | Fan Room North | Fan Room South | Discharge Area North | Discharge Area South | Avg of Inside | Outside |
|-------------------------------|----------------|----------------|----------------------|----------------------|---------------|----------|

RE: Amended Fee Proposal – Mold Cleanup Monitoring
Two Fan Rooms, 2600 Camino Ramon, San Ramon, CA 94583
SCA Proposal No: B11854a

Dear Mr. Hagopian,

As requested, SCA Environmental, Inc. (SCA) is pleased to submit this fee proposal to provide environmental quality assurance (EQA) services for the mold cleanup project for the above-referenced fan rooms.

We understand that the cleanup contractor will be onsite for 2 weekends for the 2 fan rooms (1 per fan room, starting Friday 5 pm to setup, and completing by est. 12 noon Sunday for visual inspections and semi-aggressive clearance sampling).

Scope of Work

SCA proposes to:

1. Provide the services of an Environmental Scientist, under the direct supervision of a Certified Industrial Hygienist (CIH) to provide environmental quality assurance services including perimeter air quality monitoring and inspection of isolation during all mold-related work.
2. Review the cleaning contractor's preparation of the work area, prior to commencement of installation of the access panels to the fan housing, and other procedures.
3. Perform daily observations of the contractor's work area, to document that work is being carried out safely and in compliance with the requirements of the specification, and to collect progress data.
4. Maintain a record of all relevant observations and findings made during the asbestos abatement project. A copy of this record will be provided to your office at the completion of the project.
6. Provide your office daily reports on the project. A comprehensive final report will be presented to your office within one month of completion of the entire project.
7. Provide final clearance inspection and testing. This will include a rigorous visual inspection of all work surfaces to ensure that visible debris is not residual in the work area. If the results of the visual inspection are satisfactory, then SCA will carry out semi-aggressive clearance air sampling in the work area. The semi-aggressive sampling will be conducted manually fanning the various surfaces using a rigid (plastic) panel. Samples will be collected inside and outside of the work areas for comparison of the types and levels of the

molds present. The area is considered acceptable once the inside levels are confirmed to be lower than those of the outside for all species identified.

Fee

SCA proposes to perform this project on a time and materials basis (NTE \$7,515), budgeted based on a 2-weekends contract duration, as tabulated below. Our Billing Policy and General Conditions is also attached.

| Items | Qty | Unit | \$/unit | Subtotal |
|---|-----|------|---------|----------------|
| Env Scientist (2 weekends * 3 shifts ea * 8 hrs/shift) | 48 | hrs | \$90 | \$4,320 |
| Sr. Consultant (CIH/PE) – bid assistance, QA/QC, PM, etc | 6 | hr | \$170 | \$1,020 |
| Mold air analysis (weekend 4-hr turnaround time analysis) | 12 | Ea | \$80 | \$960 |
| Report | 3 | hrs | \$90 | \$270 |
| Reprographics, shipping, supplies, equipment rental, etc. | | | | \$945 |
| Total | | | | \$7,515 |

If you have any questions, please do not hesitate to contact me.

Sincerely,
SCA ENVIRONMENTAL, INC.

Chuck Siu, CIH, PE
President
(415) 547-0572
csiu@sca-enviro.com

Attachment: Billing Policy and General Conditions

Environmental, Inc.

Billing Policy

Personnel & Equipment Charges (Time and Material Contracts)

Charges for employees are computed at the assigned scheduled billing rates. Time spent in either local or intercity travel, when travel is in the interest of the work, will be charged in accordance with the foregoing schedule; when travel by public carrier, a maximum travel charge of 10 hours per day will be made. Equipment, if used, will be billed at the scheduled rates. Rates are subject to change upon written notification 30 days in advance of such change.

Charges for services, equipment, supplies, and facilities not furnished directly by *SCA Environmental, Inc.*, any unusual items of expense not customarily incurred in our normal operations, and other reimbursable expenses, including subsistence, transportation, printing, long distance communications, shipping charges, miscellaneous supplies, and rentals, are computed at the scheduled rates, or where not applicable, at cost plus 15 percent.

Invoicing

Invoices will be issued every month. Payment terms are net 30 days. For time and materials contracts, invoices will be based upon personnel charges, equipment charges, and other charges incurred since the last invoice. For lump sum fee contracts, monthly invoices will be based upon the estimated percentage completion of the project.

In certain instances, a prepayment may be required prior to the initiation of work. Where applicable, the terms of such prepayment, or other deviations from the above invoicing schedule, will be specified in the agreement between the client and *SCA*.

Interest of 1-1/2 percent per month will be payable on amounts not paid within 30 days, payment thereafter to be applied first to accrued interest and then to the unpaid principal amount. Attorney's fees or other costs incurred in collecting any delinquent amounts shall be paid by the Client.

In the event that the Client requests termination of the work prior to completion of a report, we reserve the right to complete such analyses and records as are necessary to place our files in order and, where considered by us necessary to protect our professional reputation, to complete a report on the work performed to date. A termination charge to cover the cost thereof billed on a time and material basis up to an amount not to exceed 30 percent of all charges incurred up to the date of the stoppage of work may be made at the discretion of *SCA Environmental, Inc.*

General Conditions

Rights in Work Product

SCA retains title to the work products under this Agreement, but grants to the Client a royalty-free non-exclusive, non-transferable license (i) to make and use each invention or improvement thereto, which is or may be patentable under U.S. law and is conceived or first reduced to practice by *SCA* in the performance of services hereunder and (ii) to use or dispose of all computer software and all other recorded information (such as graphs or data tables) delivered to the Client in the performance of services hereunder.

Confidentiality

SCA will not disclose that information identified by the Client as confidential, for a period of up to five years from the date of request, provided that such action does not violate any law, regulation, or other legal requirement.

Standard of Care

SCA agrees that its services will be performed per the attached agreement, with the usual thoroughness and competence of the profession. No warranty or representation, either expressed or implied, is included or intended in our proposals, contracts, or reports.

Indemnification

SCA will indemnify, hold harmless, and defend, to the extent permissible by law, the Client, its officers, directors, agents, and employees from and against that portion of any claim or judgment to the extent which is determined to have been caused by *SCA*'s negligence.

The Client will indemnify, hold harmless, and defend, to the extent permissible by law, *SCA Environmental, Inc.*, its officers, directors, agents, and employees from and against any claim, damage, or loss, expenses, direct and indirect, and consequential damages, including but not limited to fees and charges of attorneys and court and arbitration costs, arising out of or resulting from (a) the Client's negligence or (b) any conditions, environmental or otherwise, that were in existence before the signing of this Agreement.

Liability

SCA's liability to the Client for injury or damage to persons or property arising out of work performed for the Client and which legal liability may be found to rest upon us, other than for professional errors and omissions, will be limited to our general liability insurance for which our coverage is \$1,000,000 per occurrence and in aggregate and only for that portion of such claims, costs, suits, and damages which reflect the percentage of negligence of all persons, firms or corporations which resulted in such damages.

In the event that it is finally determined that *SCA* is liable to the Client by reason of any breach of agreement, error, omission, or other act of professional negligence, our liability will be limited to our insurance coverage.

In the event the Client makes a claim against *SCA*, at law or otherwise, for any alleged error, omission, or other act arising out of the performance of our professional services, and the Client fails to prove such claim, then the Client shall pay all costs incurred by *SCA* in defending itself against the claim.

Severability

Any element of this Exhibit later held to violate a law or regulation shall be deemed void, and all remaining provisions shall continue in force. However, the Client and *SCA* will in good faith attempt to replace an invalid or unenforceable provision with one that is valid and enforceable, and which comes as close as possible to expressing or achieving the intent of the original provision.

Controlling Law

The Agreement of which this Exhibit forms a part is to be governed by the law of the state of California.

Compliance with Regulations

In providing its service, *SCA* shall endeavor, to the best of its ability, to comply with all applicable laws, ordinance codes, rules, and legal requirements.

Notices

Any notice given under the Agreement of which this Exhibit forms part shall be deemed served when hand-delivered in writing to an officer or other duly appointed representative of the party to whom the notice is directed, or if sent by registered or certified mail to the business address identified at the beginning of this Agreement.

Stomper Company, Inc Lead Compliance Plan

Click here to enter text.

LEAD COMPLIANCE PLAN

1 LEAD IN CONSTRUCTION

This Lead Compliance Plan (Plan) has been developed to comply with federal and California Construction Lead Standards, 29 CFR 1926.62 and 8 CCR 1532.1 (the Lead Standard), respectively. Construction work is defined by California's Division of Occupational Safety and Health (also known as Cal/OSHA) as any work for construction, alteration and/or repair, including painting and decorating.

A link to Cal/OSHA's Lead Standard is provided in Section 14.

2 LOCATION OF PROJECT and TESTING RESULTS

Job Location: 2600 Camino Ramon, San Ramon CA

Testing Agency / Person: Micro Analytical Laboratories, 5900 Hollis St. Emeryville, CA

The results of the lead inspection are provided in this Plan. The inspection confirmed that lead is present in the following locations:

| Location | Results | Testing Method |
|-------------------------|---------|----------------|
| 3"x3" Floor tile - Gray | 7.5 | |
| 3"x3" Floor tile - Gray | <6.3 | |
| 3"x3" Floor tile - Gray | 22 | |
| 5"x5" Wall tile - White | 4,200 | |
| 5"x5" Wall tile - White | 6,400 | |
| 5"x5" Wall tile - White | 5,600 | |
| | | |
| | | |
| | | |

Note that if XRF testing is used, a reading of 1.0mg/cm² or greater signifies the existence of lead-based paint at an assumed level of 5000ppm. Readings below that level do not confirm the non-existence of lead paint as Cal OSHA does not recognize XRF as a valid means for negative affirmation. Additionally, the results do not scale (for example a reading of 3.0 does not equate to 15,000 ppm, but does confirm the existence of lead). Please reference Section 15.1 for more information

3 SCOPE OF WORK

The scope of work or activity which has the potential to emit lead and/or may produce occupational exposures to lead is provided as **Job Specific Attachment 2** to this plan.

Additionally, Stomper Company's IIPP AND Code of Safe Practices contains general operating procedures and maintenance practices, which should be referenced for further detail. Other sources of reference pertaining to Safe Work Practices are provided in Cal/OSHA's Lead in Construction Standard 1532.1. A link is provided in Section 14.

Section 15.2 also includes a description of each work activity and the engineering controls in place. Engineering controls can include regulating the area, containment, PPE, respirator selection and usage, wetting agents, hepa vacuums and filters, administrative controls and air monitoring.

4 GENERAL CONTROL MEASURES and WORK PRACTICES

4.1 Supervisor

According to Cal/OSHA, a supervisor is one who is capable of identifying existing and predictable lead hazards in the surroundings or working conditions who has the authorization to take prompt corrective measures to eliminate them. A supervisor, will be onsite at all times and will act as the site safety and health officer for occupational health and safety issues. The supervisor person will conduct daily inspections of the job site(s), regulated areas, materials, and equipment to ensure that control

[Click here to enter text.](#)

measures, work practices, personal protective equipment, and hygiene facilities are used as prescribed in this Plan. Supervisors shall be trained in accordance with the Lead Standard.

4.2 Control Measures

The following bullet points are a non-exhaustive list of industry standard lead safety practices required by CalOSHA for work that could exceed the AL or PEL, until a NEA can be established.

- Personnel training in Lead Awareness
- Establishment of regulated area
- Containment barriers if applicable
- Use of protective clothing
- Respiratory protection.
- Dismantling or Removal of paint on metal surfaces with a chemical stripper before any cutting, abrading, or applying a flame within a closed environment.
- Use of wetting agents to minimize any air-borne dust.
- HEPA filtered negative air machines used as local exhaust during any torch cutting and/or saw cutting activities oriented to capture fume emissions.
- HEPA vacuums to capture paint chips
- Scraping of loose & flaky paint prior to demolition.
- Postponement of debris movement during periods of high building occupancy, where visible dust emissions from site activities may potentially impact areas outside of the site control zones.
- Notification to recycler or waste disposal site of lab results and establishment of waste stream or recycling by characterization as needed.

Once air monitoring confirms lead exposures are below the action level, certain practices may not be required. Please refer to the job specific scope of work & engineering controls for information pertaining to this project.

4.3 Administrative Controls

If administrative controls are used as a means of reducing employees' time-weighted-average (TWA) exposures to lead, the employer shall establish and implement a job rotation schedule which includes:

- Name and Identification Number of each affected employee

[Click here to enter text.](#)

- Duration of exposure at each job or work station
- Any other useful information in assessing reliability of the administrative controls

5 TECHNOLOGY CONSIDERED IN ENSURING EXPOSURE IS BELOW THE PEL

Stomper proposes to use the 4 industry standards and protocols to ensure that dust is controlled and that the PEL is not exceeded.

1. Establish a regulated work area
2. Use wet methods during demolition
3. Use lead-related PPE
4. Personal air monitoring & area monitoring if applicable

Air monitoring verification is required to ensure any exposure is below the PEL. See section 7 for more information.

6 EXPOSURE ASSESSMENT

Stomper Company shall initially determine if any employee may be exposed to lead at or above the action level during site activities. According to Cal/OSHA, employee exposure is *that exposure which would occur if the employee were not using a respirator*. To determine expected or potential exposure levels to workers, one of the following shall be accomplished:

- 1) Worker personal exposure monitoring; or
- 2) Base initial assessment on previous or current relevant monitoring data from similar projects during the previous 12 months.

The Permissible Exposure Limit (PEL) for lead is 50ug/cubic meter = 0.05mg/cubic meter

The Action Level (AL) for lead is 30ug/cubic meter = 0.03mg/cubic meter

[Click here to enter text.](#)

6.1 Personal Exposure Monitoring:

Personal exposure monitoring shall include the collection of full shift personal samples for each job classification in each work area. The employer shall collect personal samples representative of a full shift including at least one sample for each job classification in each work area either for each shift or for the shift with the highest exposure level. Full-shift personal sampling shall be representative of the monitored employee's daily exposure to lead. For the purposes of compliance with Cal/OSHA's PEL requirements, personal exposure monitoring shall be calculated as an 8-hour Timed Weighted Average (TWA) for working activities which are conducted over no more than an 8 hour period.

Subsequent personal air monitoring shall be conducted if there is a change of equipment, process, control, personnel, or a new task that could increase lead exposure at or above the action level.

6.2 Protection of Employees During Assessment of Exposure

Three sets of specified tasks, known as trigger tasks and referenced in Section 12, require basic protective measures where lead is present, until the employer performs an employee exposure assessment. For all three sets of tasks, employers are required to provide the following basic protective measures until air monitoring indicates exposure levels are at or below the PEL:

- Lead specific training that may include lead awareness, lead worker and / or hazard communication
- Respiratory Protection as needed & associated medical clearances
- Lead-specific protective clothing (eg Tyvek Suits, gloves, safety glasses)

Initial selection and use of respiratory protection shall be based on the trigger task and air monitoring results in accordance with Section 12. All individuals in the work area will be provided with a NIOSH/MSHA approved half-mask air purifying respirator (APR), a full face APR, or a powered air-purifying respirator (PAPR) equipped with HEPA cartridges depending on the situation. In lieu, results from air monitoring during the prior 12 months completing the same work on a similar project may be used.

[Click here to enter text.](#)

Qualitative fit-testing (such as performed with irritant smoke or banana oil) must be provided to each employee initially and at least 12 months thereafter. Respirator selection, maintenance, and care shall be performed in accordance with the employer's Respiratory Protection Program. Further information regarding respiratory selection, use, and care may be found in the Lead Standard. The Supervisor shall verify that each worker who may wear a respirator has received and maintains current medical approval.

Respirator use during activities determined by the competent person to have no potential for exposure to lead may not be necessary, *unless* other air monitoring warrants or if employees of workers nearby are performing activities which may emit lead or lead containing dust.

6.3 Personal Protective Equipment (PPE)

Reusable or disposable PPE will be worn at all times in the work area as required by this Plan. Required PPE for all operations involving potential exposures to lead or lead containing compounds shall include at a minimum:

- PPE Required for all jobsite tasks
 - Hard hats
 - ANSI approved eye protection, face shields, or vented goggles
 - Sturdy work boots
 - Work Gloves
 - Hearing protection where required
- PPE required if task exceeds Action Level, or until NEA is established (in addition to PPE above)
 - Respiratory protection in accordance with Section 6.2
 - Tyvek or similar full-body (head to toe) work clothing

6.4 Regulated Area & Signage

Regulated areas shall be established for work areas where employees are exposed to lead at or above the Action Level. Such areas shall be marked with signs as described in this Plan and will be restricted

Stomper Company, Inc Lead Compliance Plan

[Click here to enter text.](#)

only to employees authorized by the supervisor. Each employee authorized to enter the regulated area shall be provided with and required to wear protective equipment required by this Plan.

Posted signage shall read:

DANGER
LEAD WORK AREA
MAY DAMAGE FERTILITY OR THE UNBORN CHILD
CAUSES DAMAGE TO THE CENTRAL NERVOUS SYSTEM
DO NOT EAT, DRINK OR SMOKE IN THIS AREA

Alternatively, if the work occurs prior to June 1, 2016, signage could read

WARNING
LEAD WORK AREA
POISON
NO SMOKING OR EATING

6.5 Change Area and Wash Stations

If we exceed the Action Level, a clean change area equipped with separate storage facilities for PPE and equipment, shall be provided for street clothes to prevent cross-contamination with lead containing materials. All employees will be required to use to separate storage areas designed to assure that employees do not leave the workplace wearing any protective clothing or equipment.

When working with lead, a decontamination area with hand washing stations will be used to decontaminate PPE and workers. Clean water, soap, and towels will be provided to wash hands and faces after PPE removal. Wastewater will be collected, contained in 55-gallon steel drums and subsequently disposed pending analytical results. All employees shall wash hands prior to eating, taking breaks, smoking, and at the end of shift.

[Click here to enter text.](#)

Eating facilities shall be provided for employees in an area away from lead contamination risks. All employees shall not be allowed to enter eating facilities/areas with protective equipment unless surface lead dust has been removed by vacuuming, down draft booth or other cleaning method that limits dispersion of lead dust. All employees shall be required to wash their hands and face prior to eating, drinking, smoking or applying cosmetics

6.6 Housekeeping

In general, all surfaces and equipment shall be maintained as free as practicable of accumulations of lead in accordance with the Lead Standard.

7 AFTER INITIAL ASSESSMENT

Based on the results of the initial personal exposure assessments or use of monitoring results from a prior similar project, the following actions are required as follows:

7.1 Negative Initial Assessment:

If an initial determination indicates no employee is exposed at or above the Action Level (AL), the employer shall keep a written record of such determination including the date, the location, relevant levels, and the names and social security numbers of each affected employee on the attached exposures Assessment Form in Section 15.7. After a negative initial assessment, lead-specific PPE is no longer necessary but engineering controls shall continue.

7.2 Exposure below Permissible Exposure Limit (PEL) but at or Above the Action Level (AL):

If exposures are below the PEL but at or above the Action Level, further engineering controls will be put into place in an effort to get exposure levels below the Action Level. Daily monitoring for each task is to continue until two consecutive measurements are below the AL. (OSHA requires monitoring on a

[Click here to enter text.](#)

regular basis at least every six months until two consecutive measurements, taken at least seven days apart, are below the action level.)

7.3 Exposure above the Permissible Exposure Limit (PEL):

If the employee exposure is above the PEL, all work will be stopped. According to Cal/OSHA, all employees and supervisors who are engaged in lead construction work and have been shown to be exposed to lead at or above the PEL must be certified lead workers by the California Department of Health Services.

8 MEDICAL SURVEILLANCE PROGRAM

A medical surveillance program has been established by Stomper Company and made available to the entire workforce. This program has been developed in accordance with federal, state, and local requirements and covers all employees on-site who are or may be occupationally exposed to lead on any day at or above the lead action level (0.03 mg/m³). This medical surveillance program is administered by a pre-selected occupational clinic or hospital which has been contracted by the contractor. Medical surveillance records may be attached to this plan if surveillance is required by law.

Per CalOSHA Title 8 Section 1532.1 (J), medical surveillance and biological monitoring is only required for persons exposed at or above the action level for more than 30 days in a consecutive 12 months. Per historical air sampling results, employees have not been exposed at or near the Action Level, therefore blood work is not necessary.

For employees who wear respiratory protection, additional medical surveillance may also be required in accordance with the employer's written Respiratory Protection Program. These requirements include at a minimum, baseline and annual medical evaluations and annual fit tests. For further information, consult an occupational physician and applicable regulations.

9 LEAD TRAINING AND CERTIFICATION

All workers exposed to concentrations of lead below the current Cal/OSHA PEL (50 ug/m³) shall receive Lead Awareness training as required by current federal and California Lead in Construction Standards and Department of Health Services (DHS) guidelines. This training must be provided at least annually thereafter unless further exposure to lead above the action level will not occur. In addition, daily tailgate safety meetings shall be conducted by the supervisor. Topics shall include lead safety related topics as described in the Lead Standard at a minimum. All employees and supervisors who are engaged in lead related work and who have been shown to be exposed to lead at or above the PEL shall (in addition to Lead Awareness Training) also be appropriately certified by the California Department of Health Services. Reference report Section 15.4 for employee certifications.

Please note a Lead Certified Supervisor and/or Worker requirement is not necessary if significant exposure is not imminent, Per CalOSHA Code Title 8, 1532.1 (i)(3)

The employer shall ensure that all employees and supervisors who are engaged in lead related construction work as defined in Title 17, California Code of Regulations, Section 35040, and have been shown to be exposed to lead at or above the permissible exposure limit, meet the training requirements of this section, are trained by an accredited training provider and are certified by the California Department of Health Services. Lead related construction work is defined in Title 17 to be any construction, alteration, painting, demolition, salvage, renovation, repair, or maintenance of any residential or public building, including preparation and cleanup, that, by using or disturbing lead containing material or soil, may result in significant exposure of adults or children to lead. As used in the definition of lead related construction work, "public building" means a structure which is generally accessible to the public, including but not limited to, schools, daycare centers, museums, airports, hospitals, stores, convention centers, government facilities, office buildings and any other building which is not an industrial building or a residential building. Regulations for accreditation of training providers and for the certification of employees and supervisors are found in Title 17, California Code of Regulations, Division 1, Chapter 8.

Furthermore, Title 17 Division 1 Chapter VII only requires certification for lead related construction in residential or public buildings if disturbing the material may result in significant exposure above the PEL.

[Click here to enter text.](#)

10 EMPLOYEE RIGHTS AND NOTIFICATIONS

Each affected employee must be notified in writing regarding employee exposure monitoring and biological (blood lead and ZPP level) results within five working days after receipt in accordance with the Lead Standard. If the results show that the representative employee exposures without regard to use of respirators, is at or above the PEL, a written notice must accompany the results. This notice shall include a statement that the exposure level results were at or above the PEL and shall describe the corrective actions that have or will be taken to reduce exposures to below that level. All employees, and their designated representatives, shall be permitted ready access to obtain copies of all exposure and biological monitoring results and/or reports. Refer to the Lead Standard for further detail regarding these requirements.

11 MULTI-EMPLOYER WORKSITES

Appropriate arrangements shall be made on all multiple employer worksites to inform the General Contractor and/or Construction Manager of potential exposures to lead and of regulated areas. Such notification shall include verbal and/or written notifications as relevant to the project conditions. As appropriate, information communicated to affected contractors shall include:

1. Hazard work area locations and site identification
2. Site control systems including barriers, containment and or regulated areas.
3. Hazard warning signs and labels
4. Location of worker exposure monitoring results and Lead Compliance Plan.

12 TRIGGER TASKS

12.1 Level 1 Trigger Task: assume exposures greater than 50 and up to 500ug/m³ unless proven otherwise. Manual demolition of structures, manual dry scraping or sanding, heat gun applications, power tool cleaning with dust collection system, spray painting with lead, any other task where the employer has reason to believe employees may be exposed over the PEL.

Click here to enter text.

12.2 Level 2 Trigger Tasks: Assume exposures greater than 500 and up to 2500 ug/m3 unless proven otherwise. use of lead containing mortar, lead burning, where lead coatings or paint are present: rivet busting, power tool cleaning without dust collections systems, cleanup of dry expendable abrasives, abrasive blasting enclosure movement and removal

12.3 Level 3 Trigger Tasks: Assume exposures greater than 2500 ug/m3 unless proven otherwise:
Abrasive blasting, welding, torch burning

13 DOCUMENTATION AND RECORDKEEPING

This Site-Specific Lead Compliance Plan was completed by:

Stephen Rehrmann

(Name)

07/01/16

(Date)

(Signature)

This plan will be readily available, at the site for examination by all concerned parties. This plan shall be revised and updated at least every 6 months to reflect its current status in exposure control of workers to lead.

15 Job Specific Attachments

[Click here to enter text.](#)

15.1 Job Specific Attachment 1 – Lead Report Excerpt

OSHA defines 'Lead Containing Paint' (LCP) as lead in concentrations greater than 0 ppm but less than 5,000 ppm. 'Lead Based Paint' (LBP) is lead in concentrations greater than 5,000 ppm concentration.

If XRF method was used in this report. A reading of 1.0mg/cm² or greater signifies the existence of lead-based paint at a level of 5000ppm. Readings below that level do not confirm the non-existence of lead paint as Cal OSHA does not recognize XRF as a valid means for negative affirmation. Additionally, the results do not scale (for example a reading of 3.0 does not equate to 15,000 ppm, but does confirm the existence of lead).

The following pages include relevant data for this project.

this Page**

15.2 JOB SPECIFIC ATTACHMENT 2 - SCOPE OF WORK AND ENGINEERING CONTROLS

Set up and Pre Job:

1. Cal OSHA Notification necessary if amount of lead containing material to be disturbed is more than 100 sf or 100 lf, AND if percentage of lead in the material disturbed is MORE than 0.5% or 5,000 ppm or 1.0 mg/cm² (1%=10,000 ppm.)
2. All Workers in work area to have lead awareness training, even when working with materials covered by NEA
3. Workers must have respirator fit testing and training certificates unless negative exposure assessment was already been established.

Wash Station and hygiene:

- Discard suits into the lead debris bags
- Wash hands and face, and clean respirators prior to any break, lunch, and end of shift.

Lead-Related Tasks to be Performed:

- 1) Tile chipping- Yes / No

Chip the tile from the walls and/or floors using hand tools and / or bobcats. Use plenty of water to reduce any dust during demolition. Place in appropriate debris receptacles pending the results of waste characterization.

- a) **Work is a Trigger Task #1:** Work is to occur via manual demolition and does not involve cutting, abrading, or torching activities.
- b) This material has been tested via _____ , and the maximum result is 6,400ppm.

Stomper Company, Inc Lead Compliance Plan

Click here to enter text.

c) Has a prior NEA been established for this work & included in Section 15.8? Yes / No

d) **Set up Regulated Area:** Cordon off the work area with proper signage and caution tape. A plastic barrier must be used to separate demolition area from general construction site. Use lead signage in accordance with CalOSHA 1532.1

e) **Engineering and Safety Controls:**

i) Use negative air machines in the work area to scrub the air of any particulates. Tape and seal any critical barriers with visqueen except for air intake area.

ii) Full lead PPE (Tyvek suits, respirators) to be used at all times during demolition, even if NEA is established for this task in addition to standard jobsite PPE.

iii) Personal air monitor for a full shift.
Continue performing air monitoring until the results have been returned.

iv) Use of water during demolition.

2) Interior soft demolition – Yes / No

Remove existing painted drywall & metal door/frame surfaces from building. Use hand tools, bobcats and/or heavy equipment. Water to be used to keep dust to a minimum.

a) **Work is a Trigger Task #1:** With the engineering controls, methods of demolition, this work is classified as a Type 1 Trigger task, with minimal exposure risk.

b) This material has been tested via _____, and the maximum result is _____.

c) Has a prior NEA been established for this work & included in Section 15.8? Yes / No

Stomper Company, Inc Lead Compliance Plan

Click here to enter text.

d) **Regulated Area:** As a Negative exposure assessment has been established, a lead-specific regulated area is not required; therefore no work signage is required. Tape & signage shall still be used to keep unauthorized personnel out of demolition area. See Section 15.7

e) **Engineering and Safety Controls:**

i) Air Sampling has provided a negative exposure assessment, and that exposure is NOT a risk as long as the same engineering controls (water) are used. See section 15.7

ii) All workers shall be trained in lead awareness

iii) Standard jobsite PPE shall be worn at all times (hardhat, safety glasses, hearing protection as required, sturdy footwear, etc)

3) **Concrete Demolition:** – Yes / No

Remove existing concrete with lead paint. Use bobcats and/or heavy equipment. Water to be used to keep dust to a minimum.

a) **Work is a Trigger Task #1:** With the engineering controls, methods of demolition, this work is classified as a Type 1 Trigger task, with minimal exposure risk.

b) This material has been tested via _____, and the maximum result is _____.

c) Has a prior NEA been established for this work & included in Section 15.8? Yes / No

d) **Set up Regulated Area:** As a Negative exposure assessment has been established, a lead-specific regulated area is not required; therefore no work signage is required. Tape & signage shall still be used to keep unauthorized personnel out of demolition area. See Section 15.7

e) **Engineering and Safety Controls:** For work involving painted concrete surfaces, the following shall be used:

Stomper Company, Inc Lead Compliance Plan

- i) All workers to be trained in lead awareness
- ii) Standard jobsite PPE shall be worn at all times (hardhat, safety glasses, hearing protection as required, sturdy footwear, etc)
- iii) Use similar engineering controls as historical data: Water & good ventilation.
- iv) Air monitor for a full day when starting this work to verify NEA.

Technical Supervisor:  1/26/2016 Analyst: SM
 Tess Tagorda, Chemistry Supervisor Date Reported

Samples are analyzed by Flame AAS 8 Hour TWA calculated time weighted average concentration (in lead μg per cubic meter) based on 8 hours. Note: the 8 hour TWA may not be statistically accurate for actual total times less than 8 hours, at least 8 total hours should be monitored. Zero concentration is assumed for remaining time if no information is given. Micro Analytical Laboratories, Inc. assumes no responsibility for clients' interpretation of any requested TWA data or calculations in this report. Results are not corrected by subtraction of any analyte found in field blanks or laboratory blanks. Unless otherwise indicated on this report, all required Quality Control samples have been determined to be in control prior to releasing these analytical results. Unless otherwise stated in this report, all samples were received in acceptable condition for analysis. This report must not be reproduced except in full without the approval of Micro Analytical Laboratories, Inc. and pertains only to the samples analyzed. Air volumes are reported as given by the client N/A = not available. Unit explanation: μg = micrograms. RDL = Report Detection Limit.

* The Reporting Limit represents the lowest amount of analyte that the laboratory can confidently detect in the sample, and is not a regulatory level. The Units for the Reporting Limit are the same as the Units for the Final Results.

Daniele Siu

Daniele Siu, Laboratory Supervisor, Hayward Laboratory

Analytical results and reports are generated by Forensic Analytical at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by Forensic Analytical to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by Forensic Analytical. The client is solely responsible for the use and interpretation of test results and reports requested from Forensic Analytical. Forensic Analytical is not able to assess the degree of hazard resulting from materials analyzed. Forensic Analytical reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. Any modifications that have been made to referenced test methods are documented in Forensic Analytical's Standard Operating Procedures Manual. Sample results have not been blank corrected. Quality control and sample receipt condition were acceptable unless otherwise noted.

Date Analyzed: 01/22/15
Date Printed: 01/22/15
First Reported: 01/22/15

Job ID / Site: 49ers, S.C., Showers/Tile
Date(s) Collected: 1/19/15

FALI Job ID: 1528
Total Samples Submitted: 2
Total Samples Analyzed: 2

| Sample Number | Lab Number | Volume | Analyte | Result | Result Units | Reporting Limit* | Method Reference |
|---------------|------------|--------|---------|--------|--------------|------------------|------------------|
| #1 | 30703961 | 396 L | Pb | < 20 | ug/m3 | 20 | NIOSH 7082 |
| #2 | 30703962 | 396 L | Pb | < 20 | ug/m3 | 20 | NIOSH 7082 |

* The Reporting Limit represents the lowest amount of analyte that the laboratory can confidently detect in the sample, and is not a regulatory level. The Units for the Reporting Limit are the same as the Units for the Final Results.

Daniele Siu, Laboratory Supervisor, Hayward Laboratory

Analytical results and reports are generated by Forensic Analytical at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by Forensic Analytical to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by Forensic Analytical. The client is solely responsible for the use and interpretation of test results and reports requested from Forensic Analytical. Forensic Analytical is not able to assess the degree of hazard resulting from materials analyzed. Forensic Analytical reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. Any modifications that have been made to referenced test methods are documented in Forensic Analytical's Standard Operating Procedures Manual. Sample results have not been blank corrected. Quality control and sample receipt condition were acceptable unless otherwise noted.

Technical Supervisor: Tess Tagorda 2/23/2015 Analyst: TT
Tess Tagorda, Chemistry Supervisor Date Reported

Samples are analyzed by Flame AAS. 8 Hour TWAA, calculated time weighted average concentration (in lead μg per cubic meter) based on 8 hours. Note: the 8 hour TWAA may not be statistically accurate for actual total times less than 8 hours; at least 6 total hours should be monitored. Zero concentration is assumed for remaining time if no information is given. Micro Analytical Laboratories, Inc. assumes no responsibility for clients' interpretation of any requested TWA data or calculations in this report. Results are not corrected by subtraction of any analyte found in field blanks or laboratory blanks. Unless otherwise indicated on this report, all required Quality Control samples have been determined to be in control prior to releasing these analytical results. Unless otherwise stated in this report, all samples were received in acceptable condition for analysis. This report must not be reproduced except in full without the approval of Micro Analytical Laboratories, Inc., and pertains only to the samples analyzed. Air volumes are reported as given by the client. N/A = not available. Unit explanation: μg = micrograms. RDL = Report Detection Limit.

Dr. Kamashwaran Ramanathan

Dates of Analysis:
Lead Analysis (sub-contracted): 12-29-2015

All samples were received in acceptable condition unless noted in the Report Comments portion in the body of the report. Due to the nature of the analyses performed, field blank correction of results is not applied. The results relate only to the items tested.

EMLab P&K ("the Company") shall have no liability to the client or the client's customer with respect to decisions or recommendations made, actions taken or courses of conduct implemented by either the client or the client's customer as a result of or based upon the Test Results. In no event shall the Company be liable to the client with respect to the Test Results except for the Company's own willful misconduct or gross negligence nor shall the Company be liable for incidental or consequential damages or lost profits or revenues to the fullest extent such liability may be disclaimed by law, even if the Company has been advised of the possibility of such damages, lost profits or lost revenues. In no event shall the Company's liability with respect to the Test Results exceed the amount paid to the Company by the client therefor.

Project No: SJ88545D, E, F, G, H, J & K

On August 16, 17, 18, 19, 23 and September 13 & 16 2016, Patriot Environmental Laboratory Services, Inc. performed clearance air sampling for the site listed above. One hundred and thirty-two (132) air samples were collected from inside the contained work areas in an attempt to determine if airborne fiber concentrations fell below the EPA recommended clearance criteria of 0.01 fiber per cubic centimeter of air.

Air clearance sample numbers and locations are listed below, along with their respective results:

Collected On August 16, 2016:

| Lab No. | Sample Location | Result |
|------------|--|---------------------|
| 622892-001 | East Wing 4th Floor North Containment | 0.0025 Fiber per CC |
| 622892-002 | East Wing 4th Floor North Containment | 0.0029 Fiber per CC |
| 622892-003 | East Wing 4th Floor North Containment | 0.0027 Fiber per CC |
| 622892-004 | East Wing 4th Floor East Containment | 0.0029 Fiber per CC |
| 622892-005 | East Wing 4th Floor East Containment | 0.0029 Fiber per CC |
| 622892-006 | East Wing 4th Floor East Containment | 0.0027 Fiber per CC |
| 622892-007 | East Wing 4th Floor East Containment | 0.0025 Fiber per CC |
| 622892-008 | East Wing 4th Floor East Containment | 0.0027 Fiber per CC |
| 622892-009 | East Wing 4th Floor North West Containment | 0.0025 Fiber per CC |
| 622892-010 | East Wing 4th Floor North West Containment | 0.0031 Fiber per CC |
| 622892-011 | East Wing 4th Floor North West Containment | 0.0033 Fiber per CC |
| 622892-012 | East Wing 4th Floor North West Containment | 0.0027 Fiber per CC |
| 622892-013 | East Wing 4th Floor North West Containment | 0.0029 Fiber per CC |

Each sample was analyzed in accordance with the NIOSH 7400 method

On September 16, 2016, Patriot collected final PCM clearance samples and performed a final visual clearance inspection throughout the East Wing to determine the completion of flooring mastic removal at Bishop Ranch. No visual evidence of remaining or residual flooring mastic was observed. All PCM clearance results indicate that the asbestos fiber levels were below the EPA recommended clearance criteria of 0.01 fibers per cubic centimeter of air. Therefore, all contained work area at Bishop Ranch East Wing can be considered clear of asbestos containing materials.

Patriot Environmental Laboratory Services, Inc. would be pleased to answer any questions that you may have regarding this report.

Reference method NIOSH 7400-A rules. Units of Measurement: Flow rate = Liters/min; Volume = Liters; OLD = Overloaded; For laboratory, Sr' Values: Range 1 =.71, Range 2 =.37, Range 3 =.28 where Sr'=f/mm².

Note: Unless noted otherwise, samples are received in fair condition but may not account for fibers lost through transportation. Field blanks having greater than 7 fibers per 100 graticule fields, and/or box blanks having greater than 5 fibers per 100 graticule fields may indicate contamination bias of samples drawn within/from the same batch. When blanks are not provided the laboratory assumes a blank count of zero to complete necessary calculations. The laboratory uses volume related calculations when provided by the customer and is not responsible for the accuracy of those calculations. The base calculation for the limit of detection at 5.5 fibers counted (or less) per 100 FOV in a dust/debris-free environment is:

$$\text{Fibers/mm}^2 = [(5.5\text{fibers}/100\text{FOV}) - (\text{field blank fibers}/\text{Field Blank FOV Counts})] / \text{Afov}; \text{ where Afov} = 0.00785 \text{ mm}^2.$$

$$\text{Fibers/cc} = [(\text{fibers/mm}^2 \times \text{Ac}) / (\text{Sample volume} \times 1000)]; \text{ where Ac} = \text{collectable area of the filter.}$$

Reference method NIOSH 7400-A rules. Units of Measurement: Flow rate = Liters/min; Volume = Liters; OLD = Overloaded; For laboratory, Sr' Values: Range 1 =.71, Range 2 =.37, Range 3 =.28 where Sr'=f/mm².

Note: Unless noted otherwise, samples are received in fair condition but may not account for fibers lost through transportation. Field blanks having greater than 7 fibers per 100 graticule fields, and/or box blanks having greater than 5 fibers per 100 graticule fields may indicate contamination bias of samples drawn within/from the same batch. When blanks are not provided the laboratory assumes a blank count of zero to complete necessary calculations. The laboratory uses volume related calculations when provided by the customer and is not responsible for the accuracy of those calculations. The base calculation for the limit of detection at 5.5 fibers counted (or less) per 100 FOV in a dust/debris-free environment is:

$$\text{Fibers/mm}^2 = [(5.5\text{fibers}/100\text{FOV}) - (\text{field blank fibers}/\text{Field Blank FOV Counts})] / \text{Afov}; \text{ where Afov} = 0.00785 \text{ mm}^2.$$

$$\text{Fibers/cc} = [(\text{fibers/mm}^2 \times \text{Ac}) / (\text{Sample volume} \times 1000)]; \text{ where Ac} = \text{collectable area of the filter.}$$

Patriot Environmental Laboratory Services, Inc. is a participant in the AIHA-IHPAT program for airborne asbestos. This report may not be reproduced, except in full, without the expressed written consent of Patriot Environmental Laboratory Services, Inc. Reference method NIOSH 7400-A rules. Units of Measurement: Flow rate = Liters/min; Volume = Liters; OLD = Overloaded; For laboratory, Sr' Values: Range 1 =.71, Range 2 =.37, Range 3 =.28 where Sr'=f/mm².

Note: Unless noted otherwise, samples are received in fair condition but may not account for fibers lost through transportation. Field blanks having greater than 7 fibers per 100 graticule fields, and/or box blanks having greater than 5 fibers per 100 graticule fields may indicate contamination bias of samples drawn within/from the same batch. When blanks are not provided the laboratory assumes a blank count of zero to complete necessary calculations. The laboratory uses volume related calculations when provided by the customer and is not responsible for the accuracy of those calculations. The base calculation for the limit of detection at 5.5 fibers counted (or less) per 100 FOV in a dust/debris-free environment is:

$$\text{Fibers/mm}^2 = [(5.5\text{fibers}/100\text{FOV}) - (\text{field blank fibers}/\text{Field Blank FOV Counts})] / \text{Afov}; \text{ where Afov} = 0.00785 \text{ mm}^2.$$

$$\text{Fibers/cc} = [(\text{fibers/mm}^2 \times \text{Ac}) / (\text{Sample volume} \times 1000)]; \text{ where Ac} = \text{collectable area of the filter.}$$

Ian Reyes

Ian Reyes - Approved By

Reference method NIOSH 7400-A rules. Units of Measurement: Flow rate = Liters/min; Volume = Liters; OLD = Overloaded; For laboratory, Sr' Values: Range 1 =.71, Range 2 =.37, Range 3 =.28 where Sr'=f/mm².

Note: Unless noted otherwise, samples are received in fair condition but may not account for fibers lost through transportation. Field blanks having greater than 7 fibers per 100 graticule fields, and/or box blanks having greater than 5 fibers per 100 graticule fields may indicate contamination bias of samples drawn within/from the same batch. When blanks are not provided the laboratory assumes a blank count of zero to complete necessary calculations. The laboratory uses volume related calculations when provided by the customer and is not responsible for the accuracy of those calculations. The base calculation for the limit of detection at 5.5 fibers counted (or less) per 100 FOV in a dust/debris-free environment is:

Fibers/mm² = [(5.5fibers/100FOV) - (field blank fibers/Field Blank FOV Counts)] /Afov; where Afov= 0.00785 mm².

Fibers/cc = [(fibers/mm² x Ac) / (Sample volume x1000)]; where Ac= collectable area of the filter.

Mark Torres - Analyst

Ian Reyes - Approved By

Reference method NIOSH 7400-A rules. Units of Measurement: Flow rate = Liters/min; Volume = Liters; OLD = Overloaded; For laboratory, Sr' Values: Range 1 =.71, Range 2 =.37, Range 3 =.28 where $Sr' = f/mm^2$.

Note: Unless noted otherwise, samples are received in fair condition but may not account for fibers lost through transportation. Field blanks having greater than 7 fibers per 100 graticule fields, and/or box blanks having greater than 5 fibers per 100 graticule fields may indicate contamination bias of samples drawn within/from the same batch. When blanks are not provided the laboratory assumes a blank count of zero to complete necessary calculations. The laboratory uses volume related calculations when provided by the customer and is not responsible for the accuracy of those calculations. The base calculation for the limit of detection at 5.5 fibers counted (or less) per 100 FOV in a dust/debris-free environment is:

$Fibers/mm^2 = [(5.5 \text{ fibers}/100 \text{ FOV}) - (\text{field blank fibers}/\text{Field Blank FOV Counts})] / A_{fov}$; where $A_{fov} = 0.00785 \text{ mm}^2$.

$Fibers/cc = [(fibers/mm^2 \times A_c) / (\text{Sample volume} \times 1000)]$; where $A_c = \text{collectable area of the filter}$.

APPENDIX I
RESUMES

Bryan Campbell, PG, CHG

Branch Manager

Branch Location

- San Ramon, California

Education

- BA Geology, University of California at Berkeley

Professional Registrations/ Certifications

- Certified Hydrogeologist (CHG) #975, California, 2/2018
- Professional Geologist (PG) #7724, California, 2/2018
- Licensed Geologist (LG) #2909 Washington, 2/2018
- Professional Geologist (PG) #11244, Texas, 2/2018
- Geologist, #2022, North Carolina, 6/2018

Professional Affiliations

- Groundwater Resources Association of California (GRAC)

Training and Certifications

- Fundamental Contaminant Chemistry in Soil and Groundwater
- Contaminant Vapor Migration and Intrusion
- UC Berkeley Extension Classes in Remediation, Environmental Law, and Business
- HAZWOPER 29 CFR 1910.120 Training
- Behavior-Based Safety Instructor, CPR, First Aid, and Driver Safety Training

ATC Hire Date

- 4/2016

Bryan Campbell is a dedicated consulting professional with more than 20 years of responsible and diverse experience. His qualifications include program and project management, the preparation of cost estimates and proposals, fostering client relationships, budget management, staff mentorship and training, and technical/editorial review of deliverables.

Brian has acted as the Senior Geologist in charge for sites impacted with hydrocarbons, solvents, metals, pesticides, MTBE, and Volatile and Semi-Volatile Organic Compounds.

Brian has extensive health and safety training which includes HAZWOPER, behavior-based safety, driver safety training, and others. He has served as a Director of Health and Safety and as a Safety Manager for company-wide and program-wide safety programs. Brian has personally performed and overseen hundreds of field inspections and has been the lead investigator on near miss and incident investigations. He has trained and educated staff in safe work practices and implemented new safety policies and procedures company-wide.

He is adept at negotiating environmental solutions with regulators, attorneys and clients. He has performed senior review of technical documents as part of litigation support and financial auditing on complex environmental cases in support of the settlement of environmental claims.

Areas of Expertise

- Project Management
- Remediation Services
- Hazardous Materials Assessments (asbestos, lead, PCB, mold)
- Water Resource Management
- Environmental Management Systems
- Phase I and II Site Assessment Services

Project Experience

National Assessment and Remediation Projects – California, Washington, Texas and Colorado

Program Manager: Preparation of work scopes and cost estimates totaling \$18 million for national assessment and remediation projects for sites located in California, Washington, Texas, and Colorado which were impacted with hydrocarbons, solvents, metals, and pesticides. Senior Project Manager for projects with major clients including Wells Fargo Bank, Bank of the West, and JP Morgan Chase.

Former Employer – Walnut Creek, California

Senior Geologist: Mentored and trained new staff including project level geologists and engineers as well as Project Managers. Educated staff in both basic and complex environmental consulting practices and procedures. Review of over 600 assessment and remediation reports. Managed advanced remediation projects including those with dual-phase extraction, soil vapor extraction, in-situ remediation, air sparging, and groundwater extraction. Provided cost estimating for entire project lifecycles from assessment to closure.

Vapor Intrusion Specialist – Nationwide

Project Specialist: Advanced training and experience with vapor intrusion (VI) and considered to be the “go-to” person for VI. Performed vapor intrusion risk assessments using the Johnson and Ettinger model for sites across the country.

ExxonMobil, Program Manager – Nationwide

Program Manager: Program Manager Responsible for the coordination, tracking, and evaluation of environmental data for a \$3.2 million annual portfolio of approximately 40 environmental cases with ExxonMobil over a 5-year period for a total of \$16 million overall. Achieved regulatory case closure of 22 sites over a 5-year period. Managed, trained, and supervised an 8-person team of Project Managers, geologists, engineers, and technicians. Reported directly to the Board of Directors of the company.

ExxonMobil – Nationwide

Senior Manager: Part of the contract renewal team for contracts with ExxonMobil totaling \$50 million in revenue over 5 years. Personally negotiated directly with upper-level ExxonMobil managers in Houston Texas on behalf of the company to establish new unit rate scopes. Performed scoping, forecasting, and estimating for all projects within the portfolio. Performed the final review of all project invoices and change orders.

Former Employer – California

Senior Geologist: Performed senior review of technical documents as part of litigation support and financial auditing on complex environmental cases in support of the settlement of environmental claims. Senior Geologist in responsible charge for sites impacted with hydrocarbons, MTBE and solvents. Managed the permitting, compliance, and operation of soil and groundwater remedial systems exceeding \$400,000 each

Gyan L. Rusconi-Rodrigues

Project Scientist

Branch Location

- San Ramon, California

Education

- BS, Environmental Science, Biology Emphasis, University of California, Berkeley, 5/2016

Professional Registrations/Certifications

- Registration, #Number, Date
- Registration, #Number, Date

Specialized Training

- CPR and AED Certification

ATC Start Date

- 8/2017

Gyan Rusconi-Rodrigues recently joined the ATC office in San Ramon as a Project Scientist. He will be assisting the Due Diligence Practice Group. Gyan has a background in environmental science, policy, and management with a focus in biology. He is proficient with Geographic Information Systems (GIS) and Global Positioning System (GPS) technologies. Gyan is fluent in Spanish and French and has served as a Spanish-English translator.

Areas of Expertise

- Phase I and II Site Assessment Services
- Construction Environmental Oversight
- Water Resource Management
- Geographic Information Systems (GIS)

Project Experience

Storesund Consulting/Engineering LLC – Kensington, CA

Project Support Specialist: Duties included writing permits, reading blueprints/project plans and specifications, GIS analyses and field surveying for water conservation and ecology restoration projects for trout unlimited, American Rivers, and San Mateo County Resources Conservation District. Also, performed RTK GPS surveys, Nuclear Compaction Testing, Ground Based LiDAR surveys, utilized Quantum GIS software, and created AutoCAD drawings.

Basic Environmental Inc. – Oakland, CA

Environmental Research Intern: Conducted Environmental Transaction Screens and Phase I site reviews for various clients. Reviewed files to identify sites with “known” or “potential” contamination and environmentally sensitive business activities on or adjacent of subject property. Additional duties included: environmental database searches, site reconnaissance, historical searches, interviews, and summarization of reports.

Gyan Rusconi
ATC Group Services, LLC
2400 Camino Ramon, Ste. 360
San Ramon, CA 94583

PR2-062419-02

Dear Mr. Rusconi:

On June 24, 2019, the Department of Toxic Substances Control received your Public Records Act request dated June 24, 2019, which requested state records under the Public Records Act. Your specific site request is listed below in bold:

SITE: 2600 Camino Ramon, San Ramon, CA

The records you have request are ready for you to review as of today, July 3, 2019. Please contact our regional office's file room at (510) 540-3800 in order to schedule an appointment to review the records.

We would also like to inform you about our Envirostor database that is available to the public. This link provides information and documents on several thousand DTSC cleanup sites. EnviroStor can be accessed at: <http://www.envirostor.dtsc.ca.gov/public>. A computer is also made available at the central file room of each regional office for community members use in order to view EnviroStor.

Sincerest regards,

Carl Rose

Regional Central Files Coordinator

YOUR DRINKING WATER IN 2018

ANNUAL WATER QUALITY REPORT

TO OUR CUSTOMERS:

We are pleased to present the Annual Water Quality Report that shows the high quality of your drinking water. **As the water providers to more than 500,000 people, we take great effort and great pride in delivering a product that exceeds all drinking water standards set by the state and federal governments.** This report includes water quality data collected throughout 2018 and answers questions you might have about your tap water. For detailed test results, see pages 7–11.

You can be confident your tap water is of a high quality. Frequent testing for water quality and regular improvements in the treatment process keeps your drinking water among the best in the country.

We hope you find this report useful in illustrating the high quality of your water service. If you have questions about the tap water in your community, please call your water provider using the contact list on the right.

SAFETY STANDARDS ENSURE QUALITY

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

CONTAMINANTS THAT MAY BE PRESENT IN SOURCE WATER

Microbial contaminants include viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants include salts and metals that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Organic chemical contaminants include synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.

Pesticides and herbicides may come from a variety of sources, such as agriculture, urban stormwater runoff and residential uses.

Radioactive contaminants can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (US EPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the US EPA's Safe Drinking Water Hotline (1-800-426-4791).

None of the public water systems listed in this report produce or distribute bottled water. The State Division of Drinking Water mandates that the statements about bottled water be included in this report.

IMPORTANT NOTICE

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

We regularly sample water throughout our distribution system to ensure the water we deliver meets all state and federal standards. Every year, Contra Costa Water District collects about 11,000 samples and performs approximately 50,000 analyses on water from our source to your tap.

WATER QUALITY NOTIFICATIONS

LEAD IN DRINKING WATER

No water provider included in this report detected lead above the regulatory action level in their water supply. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and plumbing in buildings and homes. Your drinking water supplier is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at **1-800-426-4791** or at **www.epa.gov/lead**.

LEAD MONITORING IN SCHOOLS

In early 2017, the State Board issued amendments to domestic water supply permits of community water systems so that kindergarten through 12th grade (K-12) schools can request assistance from their water provider to conduct water sampling for lead and receive technical assistance if an elevated lead sample is found. To further safeguard water quality in California's K-12 public schools, California Assembly Bill 746, effective January 1, 2018, requires community water systems to test lead levels, by July 1, 2019, in drinking water at all California public K-12 schools, preschools, and child care facilities located on public school property constructed before January 1, 2010.

Your water providers are currently assisting local schools in our service area. Please see the tables on pages 7-11 to find out how many schools requested sampling in 2018. To find out more about the Lead Sampling of Drinking Water in Schools initiative, visit **waterboards.ca.gov/drinking_water/certlic/drinkingwater/leadssamplinginschools.shtml**.

FLUORIDE

To prevent tooth decay, fluoride is added to your drinking water. This is a long-standing practice that has improved public health over many years. To read about fluoridation, visit **waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.shtml**.

CRYPTOSPORIDIUM

Cryptosporidium is a microbial pathogen found in surface water throughout the U.S. Although filtration removes *Cryptosporidium*, the most commonly-used filtration methods cannot guarantee 100 percent removal. Our monitoring indicates the presence of these organisms in our source water and/or finished water. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of *Cryptosporidium* may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immunocompromised people, infants and small children, and the elderly are at greater risk of developing life-threatening illness. We encourage immunocompromised individuals to consult their doctor regarding appropriate precautions to take to avoid infection. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water.

THE SOURCE OF YOUR WATER

Your primary water source is surface water from the Sacramento-San Joaquin River Delta. Though Delta water quality fluctuates throughout the year, investments made by your water provider ensures the water delivered to your tap is of a consistent high-quality. Contra Costa Water District (CCWD) diverts water from four locations in the Delta: Rock Slough near Oakley, Old River near Discovery Bay, Middle River on Victoria Island, and Mallard Slough in Bay Point. CCWD's major conveyance facilities are the Contra Costa Canal, the Los Vaqueros Pipeline and the Multi-Purpose Pipeline.

CONTRA COSTA WATER DISTRICT

CCWD provides treated drinking water to homes and businesses in Clayton, Clyde, Concord, Pacheco, Port Costa, and parts of Martinez, Pleasant Hill and Walnut Creek. Water is pumped from the Delta, treated and then delivered to customers through a network of distribution pipes.

In June 2002 and May 2003, source water assessments were conducted at the Old River, Rock Slough and Mallard Slough intakes, the Los Vaqueros, Contra Loma, Mallard and Martinez reservoirs, and the Contra Costa Canal at Clyde. A source water assessment was conducted for the Middle River Intake in 2012. The assessments were based on a review of data collected from 1996 through 2001, as well as a review of the activities and facilities located at or near each source. In summary:

- **Intakes** were found to be most vulnerable to the effects of saltwater intrusion, agricultural drainage, recreational boating and regulated point discharges.
- **Reservoirs** were found to be most vulnerable to the effects of associated recreation, roads and parking lots, and watershed runoff.
- **Contra Costa Canal** was found to be most vulnerable to gas stations, chemical/petroleum processing/storage, septic systems, historic landfills and military institutions.

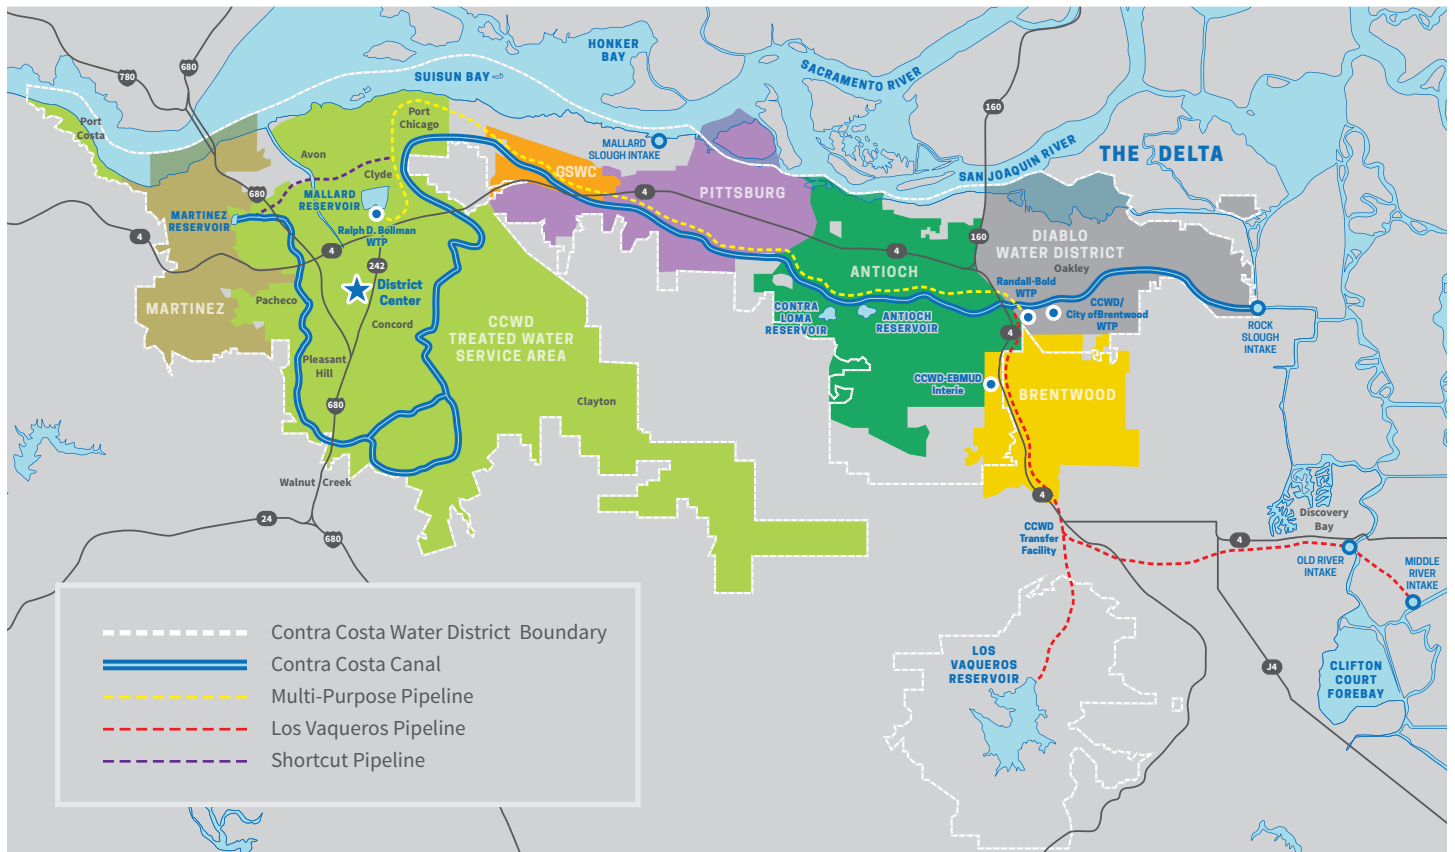

CCWD completes watershed sanitary surveys every five years and the last one was completed in 2015. The surveys concluded that potential contamination is regularly mitigated by the natural flushing of the Delta, controls at contamination sources and existing water treatment practices.

BAY POINT

The Golden State Water Company (GSWC) purchases treated water from CCWD and delivers it to customers through its distribution pipes.

BRENTWOOD

CCWD operates the CCWD/City of Brentwood's water treatment plant to treat water for the City. For complete information about the City's drinking water, visit brentwoodca.gov/gov/pw/water/reports.asp.

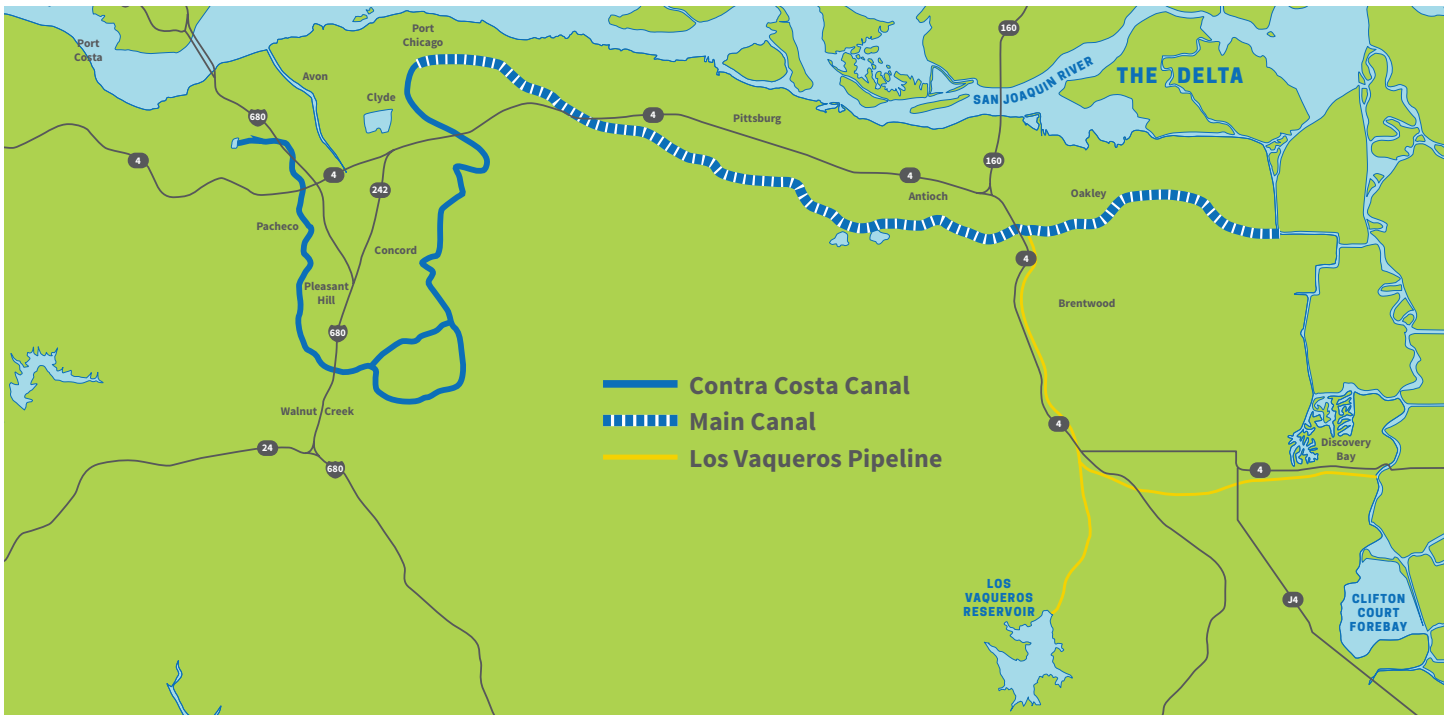

THE BACKBONE OF YOUR WATER SYSTEM

The Contra Costa Canal is the link to your water supply. It is a 48-mile, mostly concrete-lined, open aqueduct connected to Delta intakes, reservoirs, pumps, and other water facilities. The water we deliver to your home or business first travels through the Contra Costa Canal system before being treated. The canal is vital in providing reliable, high-quality water to customers.

Fresh water is fed into the canal system from our four Delta intakes or Los Vaqueros Reservoir. Once in the canal, it is diverted to cities, businesses, water treatment plants, and individual water users. Today, more than 500,000 people rely on the canal system

for public health, firefighting, and many of life's conveniences. In addition, it supports many thousands of jobs in supplying water to industrial, manufacturing, and commercial businesses.

The vision of a canal system to deliver fresh Delta water to central Contra Costa County began nearly a century ago. While the region was vastly different at that time, the need for fresh water was the same. Once constructed, the canal brought a reliable supply of high-quality water that allowed businesses to prosper and communities to flourish.

In 2018, Contra Costa Water District replaced another 5,500 feet of its Contra Costa Canal near Oakley with a 10-foot diameter pipeline. This work is part of a larger project to replace 21,000 feet of unlined canal to enhance public safety and protect water quality from groundwater intrusion.

DEFINITIONS & ABBREVIATIONS

Action Level (AL) – The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow

Maximum Contaminant Level (MCL) – The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically or technologically feasible

Maximum Contaminant Level Goal (MCLG) – The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that the addition of a disinfectant is necessary for control of microbial contaminants

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants

mg/L – Milligrams per liter

n/a – Not analyzed or not applicable (when used in average column, only one data point is available)

ND – Not detected at or above the reporting level

ng/L – Nanograms per liter

NTU – Nephelometric turbidity units

Primary Drinking Water Standards – MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements

Public Health Goal (PHG) – The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency Office of Health and Hazard Assessment

RAA – Running Annual Average

Secondary Drinking Water Standards – Secondary MCLs are set for contaminants that affect the odor, taste or appearance of water

Treatment Technique (TT) – A required process intended to reduce the level of a contaminant in drinking water

µg/L – Micrograms per liter

µmhos/cm – micromhos per centimeter (a measure of conductivity)

HOW TO READ THE TABLES

The following tables contain detailed information about the water that is delivered to your home or business. Your water is regularly tested for more than 120 chemicals and substances, as well as radioactivity. Only those constituents that were detected in 2018 are listed in the tables. Constituents may vary from provider to provider depending on water source and treatment techniques. Please see ccwater.com for a list of constituents tested but not detected.

| | | | | | WATER PROVIDER |
|-------------------------------------|---|---|----------------|---|--|
| PRIMARY DRINKING WATER STANDARDS | | | | | |
| Contaminants that may affect health | | | | | |
| Inorganic | State or Federal Goal | Highest Amount Allowed | Range Detected | Average | Major Source in Drinking Water 4 |
| Fluoride (mg/L) | 1 | 2 | 0.5–1.0 | 3 | Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories |

- 1 State or Federal Goal (PHG, MCLG or MRDLG)** – The level of contaminant in drinking water below which there is no known or expected risk to health
- 2 Highest Amount Allowed (AL, MCL or MRDL)** – The highest level of a contaminant that is allowed in drinking water
- 3 Average** – The average level of a detected contaminant in drinking water
- 4 Major Source in Drinking Water** – The most likely way a contaminant enters drinking water

| UNITS | EQUIVALENCE |
|--|-----------------------------|
| mg/L (milligrams per liter) ppm (parts per million) | 1 second in 11.5 days |
| µg/L (micrograms per liter) ppb (parts per billion) | 1 second in nearly 32 years |

WHAT'S NEW

This year, you'll notice a new section in the data tables: **Unregulated Contaminant Monitoring Rule (UCMR4 Assessment Monitoring)**. This regulation is part of the Safe Drinking Water Act, which requires the U.S. Environmental Protection Agency to identify up to 30 contaminants every five years for public water systems to monitor. The results help the EPA decide whether these contaminants should have a health-based standard.

PUBLIC MEETINGS

**First and Third Wednesday
6:30 p.m.**

1331 Concord Avenue
Concord, CA 94520
925-688-8000
ccwater.com

If you have any questions about Contra Costa Water District tap water, please call 925-688-8091.

*Randall-Bold Water Treatment Plant is a regular source of water for CCWD, Diablo Water District and the Golden State Water Company in Bay Point. It is also an as-needed source of water for Antioch and Brentwood and an emergency source for Pittsburg.

SOURCE OF WATER

The City of Antioch purchases untreated water from CCWD, treats it in a City-owned treatment plant and delivers it to customers through the City's distribution pipes. The City is also able to pump directly from the San Joaquin River or purchase treated water from CCWD.

In April 2003, Antioch conducted a source water assessment. In summary:

- **Antioch Municipal Reservoir** was found to be most vulnerable to sewer collection systems; this activity is not associated with contaminants in the water supply.

- **San Joaquin River** was found to be most vulnerable to the effects of saltwater intrusion, chemical/petroleum processing or storage, and regulated point discharges.

Water from the San Joaquin River is not always acceptable due to saltwater intrusion. When chloride levels in the river exceed 250 milligrams per liter, the City stops pumping until chloride levels decrease.

The City completes watershed sanitary surveys every five years. The last survey, completed in 2018, concluded that potential contamination is regularly mitigated by the natural flushing of the Delta, controls at contamination sources and existing water treatment practices.

TABLE OF CHEMICALS OR CONSTITUENTS DETECTED IN WATER IN 2018

| CITY OF ANTIOCH | | | | | |
|---|-----------------------|----------------------|----------------------------------|---|---|
| PRIMARY DRINKING WATER STANDARDS <small>Contaminants that may affect health</small> | | | | | |
| Inorganic | State or Federal Goal | Highest Amt. Allowed | Range Detected | Average | Major Source in Drinking Water |
| Fluoride (mg/L) | 1 | 2 | 0.5-1.0 | 0.8 | Erosion of natural deposits; water additive that promotes strong teeth |
| Nitrate as N (mg/L) | 10 | 10 | ND-0.4 | 0.4 | Runoff and leaching from fertilizer use |
| Lead and Copper | State or Federal Goal | Highest Amt. Allowed | # of Sites Tested/# Exceeding AL | 90% Percentile | Major Source in Drinking Water |

SOURCE OF WATER

The City of Martinez purchases untreated water from CCWD, treats it in a City-owned treatment plant and delivers it through the City's distribution pipes to customers who are not served treated water directly from CCWD.

PUBLIC MEETINGS

**First and Third Wednesdays
7:00 p.m.**

525 Henrietta Street
Martinez, CA 94553
925-372-2512
cityofmartinez.org

If you have any questions about the City of Martinez tap water, please call 925-372-3588.

SOURCE OF WATER

The City of Pittsburg purchases untreated water from CCWD, treats it in a City-owned treatment plant and delivers it to customers through the City's distribution pipes. In addition to the water it buys from CCWD, the City is able to pump water from two wells.

A source water assessment was conducted for the Dover Well in September 2015, and for Bodega Well in July 2009. In summary:

- **Bodega well** was found to be most vulnerable to residential sewer collection systems, abandoned military installation (Camp Stoneman) and illegal activities (drug labs).
- **Dover well** was considered most vulnerable to sewer collection systems, transportation corridors, and storm drain discharge points. No contaminants associated with the identified potentially contaminating activities (PCA) have been detected in water samples from Dover well.

SOURCE OF WATER

Diablo Water District purchases untreated water from CCWD. Water is treated and blended with groundwater pumped from two wells. The treated water is then delivered to customers through its distributions pipes.

A source water assessment was conducted for the Glen Park well in April 2005 and for Stonecreek well in March 2011. In summary:

- **Both wells** were found to be most vulnerable to historic waste dumps/landfills and septic systems (high density, >1/acre). These activities are not associated with contaminants in the water supply.

PUBLIC MEETINGS

**Fourth Wednesday
7:30 p.m.**

87 Carol Lane

| | | No Digital Data Available |
| | | Unmapped |

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 7/9/2019 at 5:19:54 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Map Unit Legend

| Contra Costa County, California (CA013) | | | |
|---|---|--------------|----------------|
| Contra Costa County, California (CA013) | | | |
| Map Unit Symbol | Map Unit Name | Acres in AOI | Percent of AOI |
| BaA | Botella clay loam, 0 to 2 percent slopes, MLRA 14 | 40.0 | 38.3% |
| Cc | Clear Lake clay, 0 to 15 percent slopes, MLRA 15 | 64.4 | 61.7% |
| Totals for Area of Interest | | 104.4 | 100.0% |

Soil Map

Scale (not to scale)

Warning: Soil Map may not be valid at this scale.

You have zoomed in beyond the scale at which the soil map for this area is intended to be used. Mapping of soils is done at a particular scale. The soil surveys that comprise your AOI were mapped at 1:24,000. The design of map units and the level of detail shown in the resulting soil map are dependent on that map scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Environmental Professional Statement:

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 part of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Professional / Senior Reviewer

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A Proposed Hotel Site
 APN 213-133-098
 San Ramon, California

1.2 Findings and Conclusions Summary

ATC has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property. The table below provides a summary of report findings and conclusions.

| FINDINGS AND CONCLUSIONS SUMMARY | | | | | | |
|----------------------------------|---|----------------------|-----------------|----------------|--------------------------|--|
| Report Section | Further Action? | De minimis Condition | REC and/or CREC | Historical REC | ASTM Non-Scope Condition | Description |
| 4.0 | User Provided Information | No | | | | |
| 5.1.1 | Federal Database Findings | No | | | | |
| 5.1.2 | State and Tribal Database Findings | No | | | | |
| 5.1.3 | Local Environmental Record Sources | No | | | | |
| 5.3 | Historical Records Sources | Yes | X | | | Note 1. The property was previously utilized for agricultural purposes. |
| 6.2 | Hazardous Substance Use, Storage and Disposal | No | | | | |
| 6.3 | Underground Storage Tanks | No | | | | |
| 6.4 | Aboveground Storage Tanks | No | | | | |
| 6.5 | Other Petroleum Products | No | | | | |
| 6.6 | Polychlorinated Biphenyls (PCBs) | No | | | | |
| 6.7 | Unidentified Substance Containers | No | | | | |
| 6.8 | Nonhazardous Solid Waste | No | | | | |
| 6.9 | Wastewater | No | | | | |
| 6.10 | Waste Pits, Ponds and Lagoons | No | | | | |
| 6.11 | Sumps | No | | | | |
| 6.12 | Septic Systems | No | | | | |
| 6.13 | Stormwater Management System | No | | | | |
| 6.14 | Wells | No | | | | |
| 7.0 | Subsurface Vapor Migration | No | | | | |
| 8.0 | Interviews | No | | | | |
| 9.1 | Asbestos-Containing Material (ACM) | No | | | | |
| 9.2 | Radon | No | | | | |
| 9.3 | Lead in Drinking Water | No | | | | |
| 9.4 | Lead-Based Paint (LBP) | No | | | | |
| 9.5 | Mold Screening | No | | | | |
| 9.6 | Additional User Requested Services | No | | | | |

Note 1: The subject property was historically utilized for agricultural purposes. Soil sampling performed on the subject property in 2019 indicated that the concentrations of organochlorine pesticides and petroleum hydrocarbons in shallow soil were below SFBRWQCB residential screening levels. Grading associated with the pad development and site preparation is expected to result in the removal of residual pesticide impacted soil. Excess soil generated during site grading activities is suitable for disposal at a Class III municipal solid waste landfill. The presence of residual pesticides is considered to represent a de minimis condition.

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." The following is a summary of *significant data gaps* identified in this report.

| SIGNIFICANT DATA GAP SUMMARY | | |
|------------------------------|--|--|
| Report Section | Description | |
| 3.5 | Current Uses of Adjoining Properties | No <i>significant data gap</i> identified. |
| 4.2 | Environmental Liens or Activity and Use Limitations (AULs) | No <i>significant data gap</i> identified. |
| 5.1 | Standard Environmental Records | No <i>significant data gap</i> identified. |
| 5.2 | Physical Setting Sources | No <i>significant data gap</i> identified. |
| 5.3 | Historical Records Sources | No <i>significant data gap</i> identified. |
| 6.1 | Methodology and Limiting Conditions | No <i>significant data gap</i> identified. |
| 8.0 | Interviews | No <i>significant data gap</i> identified. |

1.4 Recommendations

Based on information collected during the course of this Phase I ESA, no recognized environmental conditions associated with the subject property were identified. While the presence of residual pesticides in shallow soil is considered to represent a de minimis condition, these impacts would not impact the future development or use of the subject property as a hotel. Consequently, no additional investigation or analysis is recommended at this time.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property based on additional information reviewed since the previous Phase I ESA for the overall Bishop Ranch 3A Parcels was completed in 2016. This Phase I ESA included acquisition and review of updated federal, state, and local database searches. The scope of work for this Phase I ESA also includes certain potential environmental conditions that are beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.
- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.
- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.
- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property. No radon sampling was conducted.
- Lead in Drinking Water Data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.
- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.

- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.
- Regulatory Agency File and Records Review, consisting of conducting a file review (i.e., via Freedom of Information Act (FOIA) request or alternative method/source) for the property and/or one adjoining property at one regulatory agency, as warranted by the findings of the ESA.

2.3 Significant Assumption

The assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.
- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.
- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Bishop Ranch 3A Proposed Hotel Site
APN 213-133-098
San Ramon, California

database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not "certify" the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC's opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User's qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice E1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, Sunset Development Company and any of its affiliates, LodgeWorks Partners, L.P., and third parties authorized in writing by Sunset Development Company, LodgeWorks Partners, L.P., and ATC, including the lender(s) in connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a total maximum amount of \$100,000.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property represents the northwestern portion of the Bishop Ranch 3A parcels, identified as Assessor's Parcel Number (APN) 213-133-098. The subject property is located at the southeast corner of the intersection of Bishop Drive and Camino Ramon, San Ramon, Contra Costa County, California, 94583. The Site Vicinity Map is provided in Appendix A and a Site Plan is located in Appendix B. Representative Site Photographs are provided in Appendix C. As discussed in Section 5.1.3, the subject property was formerly associated with APN 213-133-086, prior to a minor subdivision modification of this parent parcel.

3.2 Surrounding Area General Characteristics

The property is located in an area that is primarily characterized by commercial development, undeveloped land, and a community center. Specific adjacent and abutting properties are summarized in Section 3.5.

3.3 Current Use of the Property

The property consists of approximately 1.463 acres of primarily undeveloped land. A fenced contractor staging area was located on or immediately adjacent to the property between 2015 and 2018. During this period, portions of the property were used for construction worker parking and for construction material staging during construction of City Center Bishop Ranch that was completed in November 2018.

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

| PROPERTY IMPROVEMENTS | |
|---|--|
| Size of Property (approximate) | 1.463 acres |
| General Topography of Property | The topography in the property vicinity is generally flat with a slight slope towards the southeast. |
| Adjoining and/or Access/Egress Roads | The property is adjoined by the terminus of Bishop Drive to the North and Camino Ramon to the west. |
| Paved or Concrete Areas (including parking) | None. |
| Unimproved Areas | The property is currently unimproved. |
| Landscaped Areas | Landscaping is present along road frontages. |
| Surface Water | None |
| Potable Water Source | East Bay Municipal Utilities District (EBMUD) |
| Sanitary Sewer Utility | Central Contra Costa Sanitary District (CCCSD) |
| Storm Sewer Utility | City of San Ramon |
| Electrical Utility | Pacific Gas & Electric Company (PG&E) |
| Natural Gas Utility | PG&E |
| Current Occupancy Status | The property is currently vacant. |
| Unoccupied Buildings/Spaces/Structures | No buildings are located at the property. |
| Number of Occupied Buildings | None |
| Building Name or General Building Description | Not applicable (N/A) |
| Number of Floors | N/A |
| Total Square Feet of Space (approximate) | N/A |
| Construction Completion Date (year) | N/A |
| Construction Type | N/A |
| Interior Finishes Description | N/A |
| Exterior Finishes Description | N/A |
| Cooling System Type | N/A |
| Heating System Type | N/A |
| Emergency Power | None |

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

| Direction from Property | Address | Occupant(s) Name | Current Use | Potential Environmental Conditions |
|-------------------------------------|---|--------------------------------|---|------------------------------------|
| North | 2461 Camino Ramon | Bishop Ranch 3, parking garage | Parking garage | None |
| East, beyond Iron Horse Trail | 12501 Alcosta Boulevard | San Ramon Central Park | Community park | None |
| | 7000 Bollinger Canyon Road | San Ramon City Hill | Under construction as new city hall | None |
| South, beyond Bollinger Canyon Road | 1071 Market Place, to the southeast beyond Iron Horse Trail | Residence Inn Marriott | Extended stay hotel | None |
| | Not available | Not available | Undeveloped land, part of Bishop Ranch 1A | None |
| | Not available, to the southwest | Not available | Parking lot | None |
| West, beyond Camino Ramon | 2694 Camino Ramon | Not available | Commercial building, part of the City Center Bishop Ranch development | None |
| | 2600 Camino Ramon, to the northwest | Not available | Commercial office building and associated parking area | Refer to Section 5.1.1 |

Please refer to Section 5.1.1 for discussion of regulatory database listings associated with adjoining property addresses.

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Sunset Development Company (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

The User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). ATC contracted Environmental Data Resources, Inc. (EDR) to perform an environmental lien search for the property. According to EDR, no environmental liens or AULs were identified for the property. A copy of the EDR Environmental Liens and AUL report is included in Appendix L.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

The User identified the current owner as BR3A LP, a California Limited Partnership.

4.6 Reason for Performing Phase I ESA

According to information provided by the User, this Phase I ESA will be used in connection with a commercial real estate transaction to identify *recognized environmental conditions* associated with the property.

4.7 Other User Provided Documents

The User provided no other documents as described in the ASTM Standard Practice E1527-13.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

| SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS | | | |
|---|-----------------|------------------|----------------|
| Regulatory Database | Search Distance | Property Listed? | # Sites Listed |
| Federal National Priority List (NPL) | 1 mile | No | 0 |
| Federal Delisted NPL | 1 mile | No | 0 |
| Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list | ½ mile | No | 0 |
| Federal CERCLIS No Further Remedial Action Planned (NFRAP) | ½ mile | No | 0 |
| Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS) | 1 mile | No | 0 |
| Federal RCRA non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD) | ½ mile | No | 0 |
| Federal RCRA Generators | ¼ mile | No | 2 |
| Federal Institutional Control/Engineering Control Registry | ½ mile | No | 0 |
| Federal Emergency Response Notification System (ERNS) list | Property | No | 0 |
| Facility Index System/Facility Registry System (FINDS) | Property | No | 0 |
| Integrated Compliance Information System (ICIS) | Property | No | 0 |
| State and Tribal NPL [RESPONSE and Bond Expenditure Plan (BEP)] | 1 mile | No | 0 |
| State and Tribal CERCLIS (ENVIROSTOR) | 1 mile | No | 2 |
| State and Tribal Landfill or Solid Waste Disposal Sites | ½ mile | No | 0 |
| State and Tribal Leaking Underground Storage Tanks (CA LUST) | ½ mile | No | 3 |
| California Spills, Leaks, and Incident Clean-Up (CA SLIC) | ½ mile | No | 0 |
| State and Tribal Registered Underground Storage Tanks (CA UST) Historical UST (CA HIST UST) list; California Facility Inventory Database (CA FID UST); and Statewide Environmental Evaluation and Planning System (CA SWEEPS UST) | ¼ mile | No | 6 |

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A Proposed Hotel Site
 APN 213-133-098
 San Ramon, California

| SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS | | | |
|--|-----------------|------------------|----------------|
| Regulatory Database | Search Distance | Property Listed? | # Sites Listed |
| State and Tribal Registered Aboveground Storage Tanks (AST) | ¼ mile | No | 4 |
| State and Tribal Institutional Control/Engineering Control Registry | Property | No | 0 |
| State and Tribal Voluntary Cleanup Site | ½ mile | No | 0 |
| State and Tribal Brownfield Sites | ½ mile | No | 0 |
| “Cortese” Hazardous Waste & Substances Sites List (CORTESE and HIST CORTESE) | ½ mile | No | 2 |
| Proposition 65 Records (Notify 65) | 1 mile | No | 0 |
| Contra Costa Co. Site List | ¼ mile | No | 18 |
| Hazardous Waste Manifests (HAZNET) | Property | No | 0 |

| EDR Recovered Government Archives (CA RGA LUST) | Property | No | 0 |

5.1.1 Federal Agency Database Findings

The property was not identified in any of the federal agency databases searched.

The following listings with a known or significant potential for release and impact on the property were identified in the federal databases searched. State database listings associated with the nearby offsite facility are discussed below, along with corresponding federal database listings.

Pacific Bell / San Ramon W1245

2600 Camino Ramon / 2600 Camino Ramon, Rooms 2E150 and 2E050

Databases: RCRA-SQG, FINDS, SWEEPS UST, UST, HIST UST, AST, CHMIRS, EMI, CONTRA COSTA CO. SITE LIST, CERS HAZ WASTE, ECHO, CERS, CERS TANKS, and RCRA-NONGEN/NLR

Approximate Distance from the Property: 1,074 feet to the northwest, beyond Camino Ramon

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: The facility is classified as a small quantity generator with no violations found. The FINDS database listing, associated with other listings, indicates that the facility is tracked by the Resource Conservation and Recovery Act (RCRA) and California Hazardous Waste Tracking System - Datamart databases. The HIST UST database lists one 10,000-gallon unspecified waste underground storage tank (UST) and one 11,763-gallon unleaded gasoline UST. The AST database lists a total of 10,000 gallons of unspecified material stored in aboveground storage tank(s). The CHMIRS database reported various incidents of relatively minor spills (e.g. hydraulic oil leak near compactor unit) or odor at the facility. The releases were reportedly contained and required no further action. According to the EMI database, various emissions have been permitted between at least 2002 and 2013. According to the CONTRA COSTA CO. SITE LIST database, the facility is a UST site, has aboveground storage, is a hazardous waste generator, and has a hazardous materials business plan (HMBP) program. No notable violations or material releases were reported. The CERS HAZ WASTE lists the facility as a hazardous waste generator. The CERS TANKS database lists the facility as having above and underground storage tank(s). The facility is listed with no RCRA violations according to the ECHO database. According to the CERS database the facility is listed as a chemical storage facility with no violations listed. Violations identified were non-compliance with HMBP and or Spill Prevention Control and Countermeasure Plan (SPCC) and failure to provide inspection reports. The last

reported violation is listed as February 19, 2019. The reported return to compliance date is listed at February 19, 2019.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

Chevron / Verizon Wireless / AT&T Mobility
6001 Bollinger Canyon Road

Databases: RCRA-LQG, FINDS, SWEEPS UST, UST, CHMIRS CONTRA COSTA CO. SITE LIST, CERS HAZ WASTE, ECHO, CERS, CERS TANKS, RCRA-NONGEN/NLR, and FUELS PROGRAM

Approximate Distance from the Property: 862 feet to the southwest

Assumed Groundwater Gradient: Cross-gradient to downgradient

Regulatory Data Summary: The facility is classified as a large quantity generator with no violations found. The FINDS database listing, associated with other listings, indicates that the facility is tracked by the Resource Conservation and Recovery Act (RCRA) and California Hazardous Waste Tracking System - Datamart databases. The SWEEPS UST database lists the facility as having eight USTs. The CHMIRS database reported undetailed incidents. The last listed incident is listed as occurring in 1995. According to the CONTRA COSTA CO. SITE LIST database, the facility is a UST site and has a hazardous materials business plan (HMBP) program. The CERS HAZ WASTE lists the facility as a hazardous waste generator. The CERS TANKS database lists the facility as having underground storage tank(s). The facility is listed with no RCRA or TSCA violations according to the ECHO database. However, the facility is listed as receiving a monetary penalty from the EPA for violating the Clean Air Act in 2016. According to the CERS database the facility is listed as a chemical storage facility with compliance violations associated with documentation and equipment listed. The reported return to compliance date is listed at May 28, 2019. The RCRA NONGEN/NLR lists the facility as non-generating handler of hazardous waste with no violations identified.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.2 State and Tribal Database Findings

The property was not identified in any of the state or tribal agency databases searched.

State database listings associated with a nearby offsite facility were previously discussed above in Section 5.1.1 along with corresponding federal database listings. In addition to those discussed above, the following listings with a known or significant potential for release and impact on the property were identified in the state and tribal databases searched:

Valero #7-033
1091 Market Place

Databases: LUST, HIST CORTESE, SWEEPS UST, UST, EDR HIST AUTO, HAZNET, CONTRA COSTA CO. SITE LIST, ENF, CERS HAZ WASTE, CERS TANKS, CERS, and RCRA NONGEN/NLR

Approximate Distance from the Property: 423 feet to the east

Assumed Groundwater Gradient: Cross- to upgradient (measured)

Regulatory Data Summary: According to the LUST and HIST CORTESE databases, a gasoline release impacted other groundwater (uses other than drinking water) and regulatory case closure

was granted on February 16, 2000. The SWEEPS UST database lists two 12,000-gallon regular unleaded gasoline UST and one 12,000-gallon leaded gasoline UST. The facility was listed on EDR Historical Auto database, as having been occupied by Exxon (2001) and Valero (2002 through 2012). According to the HAZNET database, the facility disposed of aqueous solution with total organic residues less than 10 percent, other organic solids, and other materials via offsite disposal methods. The facility is a UST site and hazardous waste generator (less than five tons per year), and has an HMBP program, according to the CONTRA COSTA CO. SITE LIST. The ENF database identified a UST program at the Exxon facility, with historical enforcement; an enforcement letter was provided and compliance was achieved on February 16, 2000.

ATC reviewed available records maintained on the Regional Water Quality Control Board (RWQCB) GeoTracker database (<http://geotracker.waterboards.ca.gov/>). Available records confirm that a gasoline release impacted other groundwater (uses other than drinking water) and regulatory case closure was granted on February 16, 2000. The closure letter indicates that a total of four groundwater monitoring wells were installed. Groundwater was encountered at depths ranging between 6.12 and 13.91 feet below ground surface (bgs), with a flow direction towards the southwest. The release was considered a low risk groundwater case. Groundwater monitoring wells were depicted at the site, only.

Discussion: Based on the closed LUST case status and absence of documented contamination migration offsite and/or toward the property, these listings are not considered to represent an environmental concern to the property.

San Ramon Valley Fire Station #34
12599 Alcosta Boulevard

Databases: LUST, HIST CORTESE, SWEEPS UST, HIST UST, AST, DRYCLEANERS, CONTRA COSTA CO. SITE LIST, CERS TANKS, CERS, and EMI

Approximate Distance from the Property: 1,016 feet to the northeast

Assumed Groundwater Gradient: Cross- to upgradient

Regulatory Data Summary: According to the LUST database, a leak was detected from a UST at the facility on March 4, 1997. Impacts from gasoline were detected in soil. The facility was given regulatory case closure on March 18, 1997. The SWEEPS UST database lists two 1,000-gallon regular unleaded gasoline USTs and one 1,000-gallon diesel gasoline UST. The AST database lists the facility as having a 2,000 gallon AST. The facility is a UST site, AST site, and hazardous waste generator, and has an HMBP program, according to the CONTRA COSTA CO. SITE LIST. The DRYCLEANERS database lists the facility as formerly having a dry cleaning facility onsite. No violations were listed. The CERS TANKS database lists the facility as having an AST. The CERS database lists the facility as a LUST cleanup site. The last violation noted in the CERS database was on March 21, 2019. No violations were noted in the EMI database listing.

ATC reviewed available records maintained on the Regional Water Quality Control Board (RWQCB) GeoTracker database (<http://geotracker.waterboards.ca.gov/>). Available records confirm that a hydrocarbon release impacted soil and regulatory case closure was granted on March 18, 1997. The closure letter indicates that a confirmatory soil samples collected during UST removal activities indicated non-detect concentrations of hydrocarbons. No groundwater was encountered during tank removal activities.

Discussion: Based on the closed LUST case status and absence of documented contamination migration offsite and/or toward the property, these listings are not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.3 Local Environmental Records Sources

Department of Toxic Substances Control

ATC contacted the Department of Toxic Substances Control (DTSC) to review available information regarding the property. According to Ann Reeser, from the DTSC (December 23, 2019, written correspondence), no files are available for the property.

ATC reviewed accessible files through the DTSC EnviroStor database (<http://www.envirostor.dtsc.ca.gov/public>). No records associated with the subject property were identified on the DTSC EnviroStor database.

Regional Water Quality Control Board

ATC contacted the RWQCB to review available information regarding the property. According to Amanda Wong, from the RWQCB (December 31, 2019, telephone correspondence), no files are available for the property.

ATC reviewed accessible files through the RWQCB GeoTracker database (<http://geotracker.waterboards.ca.gov/>). No records associated with the subject property were identified on the GeoTracker database.

Bay Area Air Quality Management District

ATC contacted the Bay Area Air Quality Management District (BAAQMD) to review available information regarding the property. According to Magnolia Vinluan-Chan, for Rochelle Henderson, from the BAAQMD (December 17, 2019, written correspondence), no files are available for the property.

Local Health Department

ATC contacted the Contra Costa County Environmental Health Department (CCCEHD) to review available information regarding the property. Available records included soil boring permit applications and a response letter from the RWQCB regarding conditional acceptance of recycled water plans.

Furthermore, CCCEHD forwarded ATC's request to Contra Costa Health Services, Hazardous Materials Program (CCHSHMP). According to Ms. Alex McMullen from the CCHSHMP (December 17, 2019, written correspondence), no files are available for the property.

Fire Department

ATC contacted the San Ramon Valley Fire Protection District (SRVFPD) to review available information regarding the property. Available records included plan review and inspection records for a Hop Festival event held at the property in 2013 and request for comments for the City Center Phase 2 Parcel Map Project. No violations or releases were reported associated with the Hop Festival and the SRVFPD signed off on the City Center Phase 2 Parcel Map Project. ATC's review of SRVFPD records identified no environmental concerns.

Department of Planning and Zoning

According to the City of San Ramon Planning Department (SRPD), the property is currently zoned as CCMU (City Center Mixed Use) and underwent a minor subdivision as discussed in Section 3.1.

Building Department

ATC contacted the City of San Ramon Building Department (SRBD) to review available information regarding the property. According to Jocelyn Kwong, from the City of San Ramon (December 20, 2019, written correspondence) only one permit was issued since 2016 for a temporary structure to test the weathering of exterior finishes that are now installed at the City Center.

Electrical Utility Company

According to the SRPD, PG&E will provide electric utilities to the property. Please refer to Section 6.6 for further information on the potential presence of PCB-containing electrical equipment on the property.

Water Utility

Potable water in the property vicinity will be provided by EBMUD. ATC reviewed the 2018 Water Quality Report produced by EBMUD. Most of the year, the drinking water comes from Pardee Reservoir in the Sierra Nevada mountains. Some parts of EBMUD's service area draw water year-round from EBMUD's Sierra Nevada supply. During times of high water demand, system maintenance or for operational needs, drinking water may come from local watersheds and may be treated at a different facility. The property vicinity appears to be located in an area served by water sourced from the Pardee Reservoir and treated at the Walnut Creek water treatment plant. No concerns were noted during the review of EBMUD data. EBMUD water meets or exceeds all federal and state water quality regulations, including those for lead. A copy of EBMUD's 2018 Annual Water Quality Report is included in Appendix L.

Sewer Utility

ATC confirmed that the City of San Ramon will provide municipal storm sewer utilities and the CCCSD will provide sanitary sewer utilities to the property vicinity.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Map Series, *Diablo, California, Quadrangle* Topographic Map, 2012, the property is located approximately 443 feet above mean sea level (MSL) and has a sloping topography towards the southeast.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

Based on the California Department of Conservation, *California Geological Survey, Generalized Geologic Map of California Note 17*, dated April 2002, the property is primarily underlain by Tertiary sedimentary rocks. Sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental). Tertiary sedimentary rocks include sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin.

5.2.3 Soils

According to ATC's review of the United States Department of Agriculture Soil Conservation Service *Web-Based Soil Survey*, the western portion of the property is underlain by Clear Lake clay, the eastern portion is underlain by Pescadero clay loam, and the southern portion is underlain by Conejo clay loam. The Clear Lake clay series consists of poorly drained soils formed from clayey alluvium derived from metamorphic and sedimentary rock. Slopes range from 0 to 15 percent. The Pescadero clay loam series consists of poorly drains soils formed from alluvium derived from sedimentary rock. Slopes range from 0 to 2 percent. The Conejo clay loam series consists of well drained soils formed from alluvium derived from sedimentary rock. Slopes range from 0 to 2 percent. A copy of the soil map is included in Appendix L.

5.2.4 Hydrology

Considering the surface topography for the property area, as interpreted from the *Diablo, California* Quadrangle map, local groundwater would be expected to flow toward the southeast. Therefore, in assessing potential off-site environmental impacts, facilities located directly northwest of the property are of primary concern. However, actual groundwater flow direction is often locally influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, production wells, and other factors beyond the scope of this study. The actual groundwater flow direction under the property can be accurately determined only by installing groundwater monitoring wells, which was beyond the scope of this project.

Information obtained from the Federal USGS (FED USGS) Well Information database included in the EDR database report, indicated that five wells are located within approximately one mile of the property. Groundwater in these wells, was measured at depths ranging between 13.0 and 115.0 feet bgs. ATC also reviewed well information on the Gregg Drilling website (<http://www.greggdrilling.com>) which indicated that the depth to groundwater in San Ramon ranges between approximately 9 and 22 feet bgs.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to the Federal Emergency Management Agency (FEMA), the property is not located in a flood zone (Flood Insurance Rate Map [FIRM] Map Number 06013C0464F, dated June 16, 2009). A copy of the FIRM is included in Appendix L.

Wetlands Map

Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (online Wetlands Mapper), there are no jurisdictional wetlands on the property. Furthermore, ATC did not observe any areas suggestive of wetlands at the property. A copy of the National Wetlands Inventory map is included in Appendix L.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

| HISTORICAL USE SUMMARY | | | | |
|------------------------|---|--|--|---|
| Period | Identified Historical Uses | | Source(s) | Intervals/Comments |
| | Property | Surrounding Area | | |
| Prior to 1940 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Railroad Tracks | Aerial Photograph Topographic Maps | The earliest record available was a topographic map dated 1896. No <i>significant data gaps</i> identified. |
| 1940 - 1960 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Railroad Tracks | Aerial Photographs Topographic Maps | No <i>significant data gaps</i> identified. |
| 1961 - 1980 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Railroad Tracks | Aerial Photographs Topographic Maps | No <i>significant data gaps</i> identified. |
| 1981 - 2000 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Park | Aerial Photographs City Directories | No <i>significant data gaps</i> identified. |
| 2001 - present | Undeveloped Construction Parking and Staging (2015 to 2018) | Undeveloped Commercial Park | Aerial Photographs Tax Files Topographic Map City Directories Building Department Zoning Department | No <i>significant data gaps</i> identified. |

The property was historically utilized for agricultural purposes. Based on the historical agricultural usage of the property, pesticides and/or herbicides may have been utilized on the property and near-surface soils may have at one time contained these compounds. However, no evidence of large scale pesticides and/or herbicides use, storage or mixing was observed during review of historical sources.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A Proposed Hotel Site
 APN 213-133-098
 San Ramon, California

5.3.1 Aerial Photographs

ATC obtained available aerial photographs of the property and surrounding areas from EDR. Available aerial photographs ranged from 1939 to 2012. The following are descriptions and interpretations from the aerial photograph review. Copies of reproducible aerial photographs are included in Appendix F.

| AERIAL PHOTOGRAPH SUMMARY | | |
|--|-------------------|--|
| Year | Scale | Comments |
| 1939, 1946, 1949, 1950, 1959, 1966, and 1968 | 1 inch = 500 feet | Property: Undeveloped and/or agricultural land. Surrounding Area: Undeveloped and/or agricultural land with what appear to be residential or commercial structures located further to the north. |
| 1979 | 1 inch = 500 feet | Property: Generally the same as the previous aerial photograph. Surrounding Area: Generally the same as the previous aerial photograph, with the exception of Bollinger Canyon Road depicted to the south. |
| 1982 | 1 inch = 500 feet | Property: Generally the same as the previous aerial photograph. Surrounding Area: Generally the same as the previous aerial photograph, with the exception of the construction of commercial development to the west (and further to the southwest) and residential development further to the northeast. |
| 1993 and 1998 | 1 inch = 500 feet | Property: Undeveloped land. Surrounding Area: Undeveloped land to the north and south. Areas to the east and west appear to be developed in its current configuration. The existing road configuration is present. |
| 2005, 2006, 2009, 2010, and 2012 | 1 inch = 500 feet | Property: Generally depicted in its current configuration. Surrounding Area: Generally depicted in its current configuration. |

The review of aerial photographs did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.2 Fire Insurance Maps

ATC requested copies of historical Sanborn Fire Insurance Maps (Sanborn Maps) depicting the property and surrounding area from EDR. According to EDR, Sanborn Map coverage of the property is not available. A copy of EDR's "unmapped property" letter is included in Appendix G.

5.3.3 Property Tax Files

ATC reviewed available tax files maintained at the Contra Costa County Assessor's Office for historical ownership information of the property during the 2016 Phase I ESA completed for the property. Documentation is included in Appendix G.

| TAX RECORDS OWNERSHIP SUMMARY | |
|--|---------------------------|
| Owner | Date |
| BR3A LLC | August 2016 to Present |
| City of San Ramon, a municipal corporation | June 2001 to August 2016 |
| Sunset Land Company, LLC, a California limited liability company | Unknown date to June 2001 |

The review of tax files did not identify past uses indicating *recognized environmental conditions* at the property.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

ATC reviewed historical topographic maps obtained from EDR dated 1896, 1898, 1943, 1953, 1968, 1973, 1980, and 2012. The historical topographic maps were reviewed with the intent to evaluate changes in land use and areas of potential environmental concern visible at the property.

Between 1896 and 1898, the property vicinity was generally depicted as undeveloped land. By 1943, agricultural land was depicted to the west, railroad tracks (San Ramon Branch) were located to the east, and small unspecified structures were depicted further to the north. By 1953, the property and surrounding areas to the north, south, and west were depicted as agricultural land. Railroad tracks (Southern Pacific) were depicted to the east. By 1973, agricultural land was no longer depicted at the property. In 1980, the property vicinity was generally depicted as undeveloped land. Bollinger Canyon Road was depicted to the south, a railroad grade area was located to the east, and small unspecified structures were depicted further to the north. In 2012, the property vicinity was depicted as generally undeveloped land. The existing road configuration was present.

Documentation is included in Appendix G. The review of historical USGS Topographic Maps did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR during the 2016 Phase I ESA completed for the property. The following are descriptions and interpretations from the historical city directory review. Documentation is included in Appendix G.

| CITY DIRECTORY SUMMARY | |
|------------------------|--|
| Year | Comments |
| 1975 – 1980 | Property: No listings Surrounding Area: No listings |
| 1985 – 1992 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park |
| 1995 | Property: No listings Surrounding Area: No listings |
| 1999 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park 6101 Bollinger Canyon Road: Office building 6111 Bollinger Canyon Road: Office building |
| 2003 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park |
| 2008 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park 6101 Bollinger Canyon Road: Chevron office building 6111 Bollinger Canyon Road: Multi-tenant office building 6121 Bollinger Canyon Road: Multi-tenant office building |
| 2013 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: American Express/Chevron Corp. Office Park 6101 Bollinger Canyon Road: Multi-tenant office building 6111 Bollinger Canyon Road: Multi-tenant office building 6121 Bollinger Canyon Road: Pacific Gas & Electric Company |

The review of city directories did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding areas.

5.3.7 Building Department Records

ATC reviewed available historical building department records maintained at the SRBD for information regarding past uses of the property and surrounding area during the 2016 Phase I ESA completed for the property. Minimal available permits pertain to electrical permitting (2009), signage (2002), and planning review (2002). No records were available for prior onsite structures.

The review of building department records did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area. Documentation is included in Appendix G.

5.3.8 Zoning/Land Use Records

According to the SRPD, the property is currently zoned as CCMU, defined as City Center Mixed Use. No historical zoning information was available for the property. However, ATC's research indicates that the property was historically utilized for agricultural purposes.

5.3.9 Prior Reports

ATC reviewed a previous Phase I ESA that included the entire BR3A property, including the subject property. This Phase I ESA was prepared by ATC and dated January 18, 2016. The 2016 Phase I ESA did not identify any conditions or past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area. According to the Phase I ESA the property was historically utilized for agricultural purposes. Based on the historical agricultural usage of the property, pesticides and/or herbicides may have been utilized on the property and near-surface soils may have at one time contained these compounds; however, evidence of large scale pesticides and/or herbicides use, storage or mixing was not observed during review of historical sources. ATC recommended that if future development activities included soil disturbance such as grading or excavation, soil should be characterized for hazardous substances including herbicides/pesticides to address potential impacts from prior agricultural use. The 2016 Phase I ESA is included in Appendix H.

ATC performed an environmental assessment of the BR3A property, including the portion of the property to be developed as the proposed hotel site. The details regarding this assessment are summarized in the Subsurface Investigation Report prepared by ATC, dated September 16, 2019. During this investigation, soil samples were collected from two borings (B-1 and B-2) advanced within the limits of the subject property. Soil samples were collected from each soil boring at depths of approximately 1 and 3 feet below ground surface (bgs). A summary of the findings of this investigation is provided below:

- Total petroleum hydrocarbons (TPH) in the diesel range (TPHd) ranging from approximately 5.4 to 220 milligrams per kilogram (mg/kg) and motor oil range (TPHo) ranging from approximately 23 to 180 mg/kg. The concentrations of TPHd and TPHo are below the SFRWQCB Tier I Environmental Screening Levels (ESLs).
- Residual organochlorine pesticides, including DDT, DDD, DDE, Endosulfan I and Endosulfan II were detected in soil, but at concentrations below SFRWQCB Residential Screening Levels.
- Metals were detected in soil at concentrations consistent with regional background levels for these naturally-occurring elements.

In summary, the analytical results of soil samples obtained within the proposed hotel site parcel were below applicable health-based screening levels for residential land use. Residual concentrations of the constituents detected in soil appear to represent de minimis impacts associated with the historical use of the property for agricultural purposes. A complete copy of the 2019 Subsurface Investigation Report is included in Appendix H.

5.3.10 Other Historical Sources

No other historical sources were reviewed as a component of this assessment.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property during the ESA site reconnaissance activities at the property. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

Mr. Gyan Rusconi, a Project Scientist at ATC, conducted the site reconnaissance on December 19, 2019 and was unescorted during the site reconnaissance. The site reconnaissance consisted of visual and/or physical observations of the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property were observed along the perimeter and in a general grid pattern in safely accessible areas, if accessible and possible. Weather conditions at the time of the site reconnaissance were cool and cloudy with no visibility limitations.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC observed the property to be vacant and largely vegetated with grasses and scrub brush. Mature trees divide the property from Camino Ramon to the west and Bishop Drive to the north. An approximately six foot high, temporary chain-link fence separates the property from Bishop Drive. Miscellaneous construction debris (e.g., posts and fencing) was observed on the adjacent parcel to the east.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property.

6.4 Aboveground Storage Tanks (ASTs)

ATC did not observe evidence of ASTs on the property.

6.5 Other Petroleum Products

ATC did not observe evidence of the use, storage or disposal of other petroleum products in, on or at the property.

6.6 Polychlorinated Biphenyls (PCBs)

ATC observed underground transformer vaults/electrical features located along the landscaped portions of the property. The transformer units/features are owned and operated by PG&E, which is responsible for the maintenance of the transformer units. Given the utility ownership and observed conditions, the electrical transformers are not considered to represent an environmental concern to the property at this time. Furthermore, given the age of the property improvements, it is not considered likely that the transformer fluid contains PCBs.

No other suspect PCB-containing equipment was observed at the property at the time of the site reconnaissance.

6.7 Unidentified Substance Containers

ATC did not observe evidence of unidentified substance containers at the property.

6.8 Nonhazardous Solid Waste

ATC did not observed evidence of the generation, storage or disposal of nonhazardous solid waste in, on or at the property.

6.9 Wastewater

ATC observed evidence of wastewater generated, treated or discharged (including sanitary sewage and stormwater) in, on or at the property or to adjoining properties as summarized below.

| WASTEWATER SUMMARY TABLE | | | |
|--------------------------|--------------------|-------------------|----------------|
| Type of Wastewater | Generation Process | Treatment System? | Discharged To? |
| Stormwater | Stormwater runoff | No | Storm sewer |

The generation and discharge of wastewater at the property is not considered to represent an environmental condition.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons in, on or at the property.

6.11 Drains and Sumps

ATC did not observe evidence of drains or sumps in, on or at the property, with the exception of storm drains.

6.12 Septic Systems

ATC did not observe evidence of a septic system in, on or at the property.

6.13 Stormwater Management System

Stormwater that accumulates on the property infiltrates the ground or flows toward catch basins.

6.14 Wells

ATC did not observe evidence of wells in, on or at the property.

7.0 SUBSURFACE VAPOR MIGRATION

ATC conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the property and also utilized the aforementioned regulatory agency database report provided by EDR and an EDR Vapor Encroachment Screen (VES) Report to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, ATC utilized the approximate minimum search distance defined by ASTM E 2600-10 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, ATC utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. The EDR VES report calculates the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

ATC reviewed potential sources of COCs from the facilities reported on the EDR database report and VES report. Based on review of this information, no VECs were identified in relation to the property.

8.0 INTERVIEWS

ATC interviewed the following person(s) to obtain information regarding *recognized environmental conditions* in connection with the property:

| INTERVIEW SUMMARY | | | | |
|-------------------|-------------|---|----------------------------|----------------|
| Role | Name | Title/Company | Years Assoc. With Property | Interview Type |
| Client | Jerry Engen | Senior Vice President, Development / Bishop Ranch, A Sunset Development Project | 3+ | Written |

Not included in this listing are those governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have first-hand knowledge of *recognized environmental conditions* at the property.

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Materials (ACM)

No buildings are present at the property. Therefore, consideration of ACM was not included in the scope of work for this ESA.

9.2 Radon

Radon is a naturally-occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the property is located in U.S. EPA Radon Zone 2, an area of moderate propensity with regard to the potential for elevated levels of radon gas. Zone 2 areas have predicted radon concentrations between 2 and 4 pCi/L. Out of 41 sites in the property vicinity (zip code 94583) tested for radon, three of the results were above 4.0 pCi/L. Given the available statistics and the undeveloped/staging area usage of the property improvements, radon is not considered to represent a concern, and no additional action or investigations are recommended.

9.3 Lead in Drinking Water

ATC confirmed with the EBMUD that the municipally-supplied water meets all drinking water standards, including those for lead. As there is no established water connection, lead in drinking water testing was not conducted as a component of this Phase I ESA.

9.4 Lead-Based Paint (LBP)

No buildings are present at the property. Therefore, consideration of LBP on painted surfaces was not included in the scope of work for this ESA.

9.5 Mold Screening

No buildings are present at the property. Therefore, consideration of mold was not included in the scope of work for this ESA.

9.6 Additional User Requested Conditions

No additional User requested services were included in the scope of work for this ESA.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

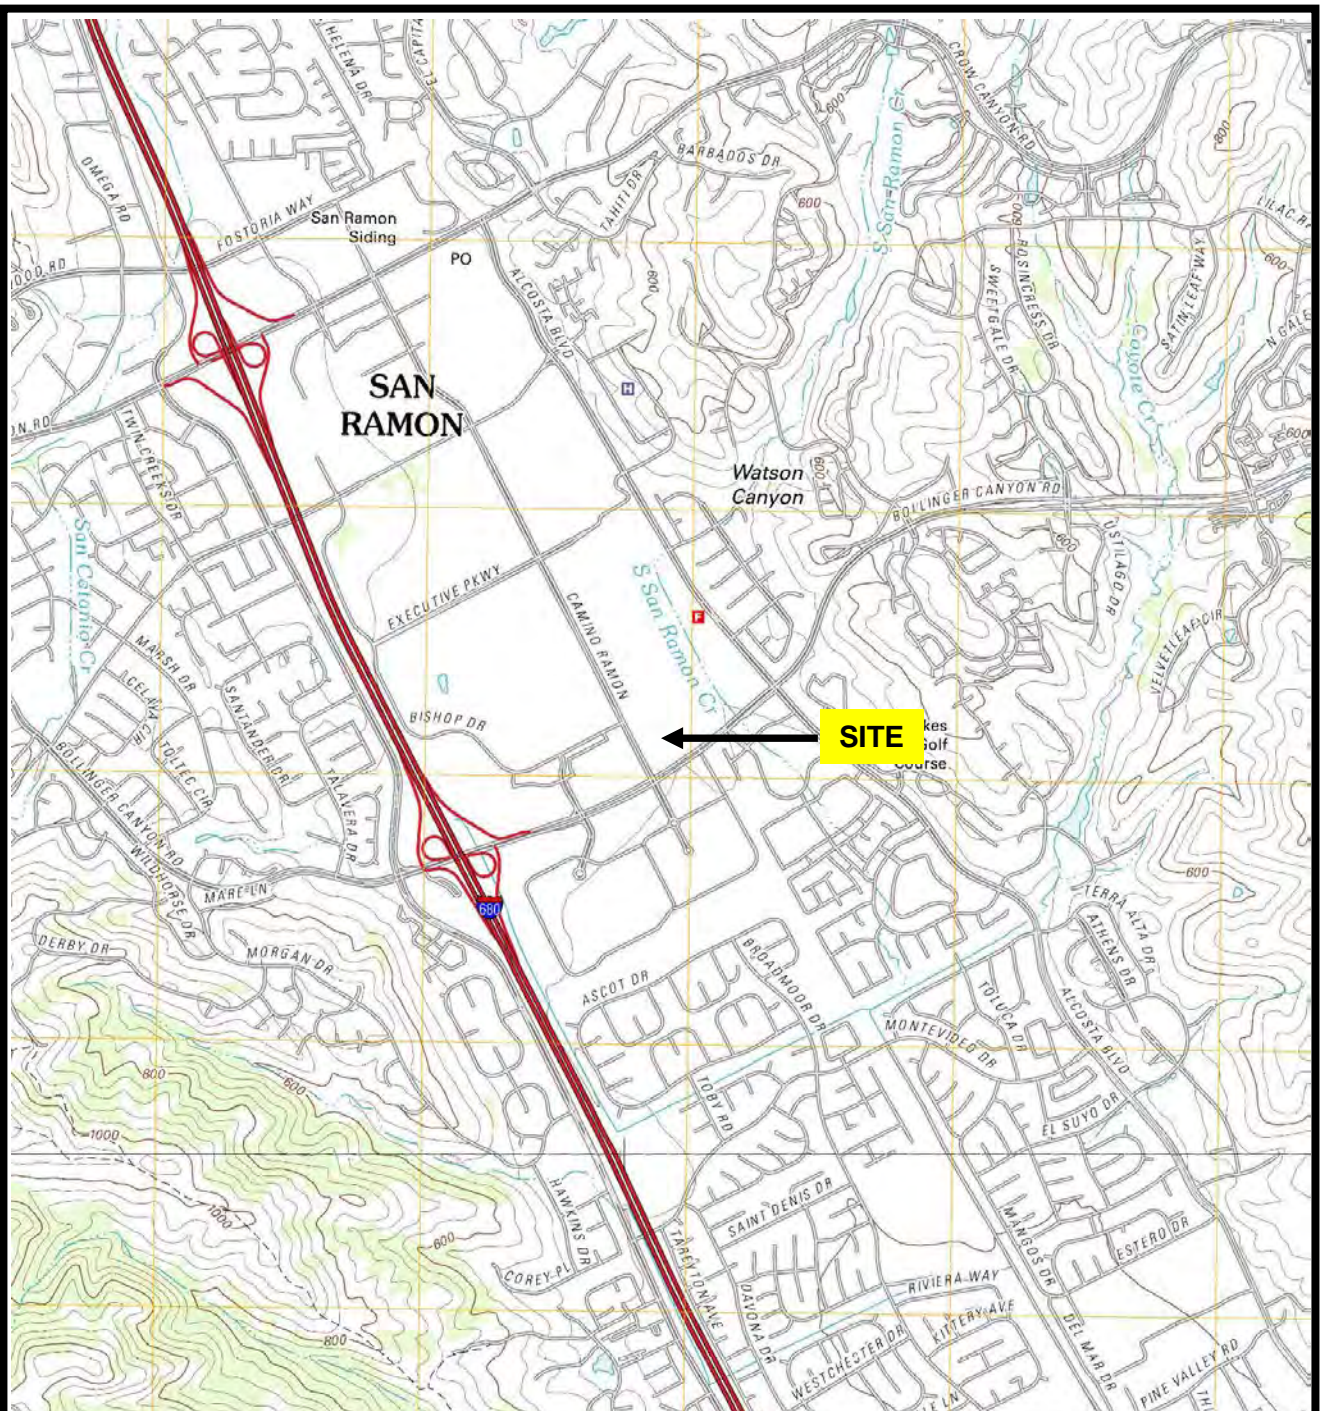

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/24/2019 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information

EXECUTIVE SUMMARY

that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/29/2019 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 6 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/24/2019 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Violation Source: CERS

Site ID: 389846
Site Name: CHEVRON CORPORATE HEADQUARTERS-CHEVRON PARK
Violation Date: 05-28-2019
Citation: 23 CCR 16 2716(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(f)

Violation Description: "Failure to maintain on-site, or off-site at a readily available location if approved by the UPA, copies of Designated Operator inspection records as follows: Designated operator monthly inspection records for inspections performed before October 1, 2018 must be kept for 12 months from the month of inspection. For inspections performed on or after October 1, 2018, copies of the ""Designated Underground Storage Tank Operator Visual Inspection Report"" must be kept for 36 months from the month of inspection. "

Violation Notes: Returned to compliance on 05/28/2019. OBSERVATION: Facility did not maintain copies of DO inspections completed before 10/1/18 for 12 months, or copies of those completed after 9/30/18 for 36 months. Missing February and March DO Reports. CORRECTIVE ACTION: Maintain copies of DO inspections for required time frames. Submit proof that February and March DO Reports.

Violation Notes: records of spill containment testing for 36 months. " Returned to compliance on 05/28/2019. OBSERVATION: Owner/Operator failed to meet one or more of the following spill container requirements: install or maintain spill container which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill container, and is resistant to galvanic corrosion; did not perform tightness test at installation, every 12 months thereafter, or within 30 days after a repair; did not have tested using manufacturer's guidelines, industry codes, engineering standards, or method approved by PE, or was not tested by a certified UST service technician; or failed to maintain testing records for 36 months. CORRECTIVE ACTION: Install or repair spill buckets to meet all of the listed requirements, have tightness tested using approved method, by certified UST service technician, and submit documentation to verify compliance. Maintain all testing records for 36 months.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overflow prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overflow prevention equipment that does not use flow restrictors on vent piping to meet overflow prevention equipment requirements when the overflow prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days

| Description: | 7 employees at the Pacific Bell Office complained of light headedness, nauseous for a gasoline type smell. They are being examined at scene - unknown if they will be transported to a medical facility for further evaluations. An unknown number of eemployees have been evacuated. She will call back with the number of evacuees. There is an underground gasoline storage tank being removed near the building. |

Violations:

Site ID: 497
Site Name: 2600 Camino Ramon
Violation Date: 02-19-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/19/2019. OBSERVATION: CCHSHMP observed that the business did not include hydraulic oil container for the elevator, Fluorescent lights, and testing water in the Hazardous Materials Inventory in the CERS. CORRECTIVE ACTION: The business completed and electronically submitted the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities in the CERS during the inspection. No further action is required.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2019

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

USGS TOPOGRAPHIC MAP

| | |
|----------------------|--------------------|
| Target Property Map: | 5640382 DIABLO, CA |
| Version Date: | 2012 |
| South Map: | 5640384 DUBLIN, CA |
| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
|---|-------------------------|
| 06013C0464F | FEMA FIRM Flood data |
| <u>Additional Panels in search area:</u> | <u>FEMA Source Type</u> |
| 06013C0463F | FEMA FIRM Flood data |
| 06013C0577F | FEMA FIRM Flood data |

NATIONAL WETLAND INVENTORY

| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
|------------------------------------|--|
| DIABLO | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status: | Not found |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| 4 | 1/2 - 1 Mile NE | Not Reported |
| 6 | 1/2 - 1 Mile NNW | Not Reported |
| 1G | 1/2 - 1 Mile NNW | Not Reported |
| 2G | 1/2 - 1 Mile NE | Not Reported |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|--|--|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 29 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 7.4 |
| 2 | 29 inches | 59 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 7.4 |

Soil Map ID: 2

Soil Component Name: PESCADERO

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 168 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|------------------------------------|--|---|--|--------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 5 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 4 Min: 1.4 | Max: 9 Min: 7.9 |
| 2 | 5 inches | 42 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 4 Min: 1.4 | Max: 9 Min: 7.9 |
| 3 | 42 inches | 66 inches | stratified silt loam to silty clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 4 Min: 1.4 | Max: 9 Min: 7.9 |

Soil Map ID: 3

Soil Component Name: CONEJO

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cardno ATC #75 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Cardno ATC #75 (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Cardno ATC #75 on Dec 28, 2015.

TARGET PROPERTY

6200 Bollinger Canyon Road
San Ramon, CA 94583

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Environmental Professional Statement:

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 part of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Audrey Lundin, Due Diligence Services Manager
Environmental Professional / Site Assessor

Gabe Stivala, P.G. / Senior Geologist
Environmental Professional / Senior Reviewer

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A
 6200 Bollinger Canyon Road
 San Ramon, California

1.2 Findings and Conclusions Summary

ATC has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property. The table below provides a summary of report findings and conclusions.

| FINDINGS AND CONCLUSIONS SUMMARY | | | | | | |
|----------------------------------|---|----------------------|-----------------|----------------|--------------------------|--|
| Report Section | Further Action? | De minimis Condition | REC and/or CREC | Historical REC | ASTM Non-Scope Condition | Description |
| 4.0 | User Provided Information | No | | | | |
| 5.1.1 | Federal Database Findings | No | | | | |
| 5.1.2 | State and Tribal Database Findings | No | | | | |
| 5.1.3 | Local Environmental Record Sources | No | | | | |
| 5.3 | Historical Records Sources | Yes | X | | | 1) The property was previously utilized for agricultural purposes. |
| 6.2 | Hazardous Substance Use, Storage and Disposal | Yes | X | | | 2) Three, five-gallon uncovered buckets containing oily material were observed. Oil stains on underlying soil and distressed vegetation were observed. |
| 6.3 | Underground Storage Tanks | No | | | | |
| 6.4 | Aboveground Storage Tanks | No | | | | |
| 6.5 | Other Petroleum Products | No | | | | |
| 6.6 | Polychlorinated Biphenyls (PCBs) | No | | | | |
| 6.7 | Unidentified Substance Containers | Yes | X | | | Refer to item 2, above. |
| 6.8 | Nonhazardous Solid Waste | No | X | | | 3) Limited areas of non-hazardous trash/debris were observed onsite. |
| 6.9 | Wastewater | No | | | | |
| 6.10 | Waste Pits, Ponds and Lagoons | No | | | | |
| 6.11 | Sumps | No | | | | |
| 6.12 | Septic Systems | No | | | | |
| 6.13 | Stormwater Management System | No | | | | |
| 6.14 | Wells | No | | | | |
| 7.0 | Subsurface Vapor Migration | No | | | | |
| 8.0 | Interviews | No | | | | |
| 9.1 | Asbestos-Containing Material (ACM) | No | | | | |
| 9.2 | Radon | No | | | | |
| 9.3 | Lead in Drinking Water | No | | | | |
| 9.4 | Lead-Based Paint (LBP) | No | | | | |
| 9.5 | Mold Screening | No | | | | |
| 9.6 | Additional User Requested Services | No | | | | |

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." The following is a summary of *significant data gaps* identified in this report.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Bishop Ranch 3A
6200 Bollinger Canyon Road
San Ramon, California

| SIGNIFICANT DATA GAP SUMMARY | | |
|------------------------------|---|--|
| Report Section | Description | |
| 3.5 | Current Uses of Adjoining Properties | No <i>significant data gap</i> identified. |
| 4.2 | Environmental Liens or Activity and Use Limitations (AULs) | No <i>significant data gap</i> identified. |
| 5.1 | Standard Environmental Records | No <i>significant data gap</i> identified. |
| 5.2 | Physical Setting Sources | No <i>significant data gap</i> identified. |
| 5.3 | Historical Records Sources | No <i>significant data gap</i> identified. |
| 6.1 | Methodology and Limiting Conditions | No <i>significant data gap</i> identified. |
| 8.0 | Interviews | No <i>significant data gap</i> identified. |

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC offers the following recommendations:

- If future development activities include soil disturbance such as grading or excavation, soil should be characterized for hazardous substances including herbicides/pesticides and petroleum hydrocarbons to address potential impact from prior agricultural use and temporary construction staging activities (minor spills of oily material). Any identified impacted soil removed from the property should be transported and disposed in accordance with applicable regulations. The preparation of a soil management plan, prior to soil disturbance such as grading or excavation, may be warranted.
- ATC recommends that the open buckets of oily material and trash/debris observed onsite be removed from the property and disposed of in accordance with applicable regulations.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.
- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.
- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.
- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- The scope of work for the Mold Screening was intended to be consistent with ASTM E 2418-06: Standard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to at least one knowledgeable person from property management or engineering staff. The document review was limited to only those relevant documents made readily available to ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein, ATC observed the HVAC equipment room(s) and accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted otherwise, ATC observed accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor (if applicable). For multi-story buildings, the total number of floors observed (inclusive of those

already mentioned) was intended to be up to 10% of the total number of floors (if readily accessible). For hotel and multi-family buildings, ATC targeted the lowest and highest levels and roof as described above and up to 10% of units, including one per floor if readily accessible. The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the property.

- Visual observation of suspect asbestos-containing materials (ACM), consisting of providing an opinion on the condition of suspect ACM on the property based upon visual observation during the site reconnaissance. No sampling of suspect ACM was conducted.
- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property. No radon sampling was conducted.
- Lead in Drinking Water Data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.
- Visual observation of Lead-based paint (LBP), consisting of providing an opinion on the potential for suspect LBP based on the construction date of buildings on the property and visual observation of the condition of suspect LBP.
- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.
- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.
- Regulatory Agency File and Records Review, consisting of conducting a file review (i.e., via Freedom of Information Act (FOIA) request or alternative method/source) for the property and/or one adjoining property at one regulatory agency, as warranted by the findings of the ESA.

2.3 Significant Assumption

The assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Bishop Ranch 3A
6200 Bollinger Canyon Road
San Ramon, California

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.
- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.
- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB) Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not “certify” the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC’s opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User’s qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice E1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, Sunset Development Company, and any of its affiliates, and third parties authorized in writing by Sunset Development Company and ATC, including the lender(s) in connection with a secured financing of the property, and their respective successors and assigns. Any third party agrees by accepting this report that any use or reliance on this report shall be limited by the exceptions and limitations in this report, and with the acknowledgment that actual site conditions may change with time, and that hidden conditions may exist at the property that were not discovered within the authorized scope of the assessment. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

ATC makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. Unless otherwise agreed upon in writing by ATC and a third party, ATC’s liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a total maximum amount of \$100,000.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property address is 6200 Bollinger Canyon Road, San Ramon, Contra Costa County, California, 94583. The Site Vicinity Map is located in Appendix A. The Site Plan is located in Appendix B. Site Photographs are provided in Appendix C. According to information obtained from the Contra Costa County Assessor's Office, the property is identified as Assessor's Parcel Number (213-133-086).

3.2 Surrounding Area General Characteristics

The property is located in an area that is primarily characterized by commercial development, undeveloped land, and a community center. Specific adjacent and abutting properties are summarized in Section 3.5.

3.3 Current Use of the Property

The property consists of approximately 10.66 acres of primarily undeveloped land. A fenced contractor staging area, utilized by Granite Construction, is located on the northeastern portion of the property. A former contractor staging area, with fencing present, is located to the west of the area occupied by Granite Construction.

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

| PROPERTY IMPROVEMENTS | |
|---|---|
| Size of Property (approximate) | 10.66 acres |
| General Topography of Property | The topography in the property vicinity is generally flat with a slight slope towards the southeast. |
| Adjoining and/or Access/Egress Roads | The property is adjoined by Bollinger Canyon Road to the south and Camino Ramon to the west. |
| Paved or Concrete Areas (including parking) | None, with the exception of a gravel access road extending from Bollinger Canyon Road toward the occupied staging area. |
| Unimproved Areas | The property is currently unimproved. |
| Landscaped Areas | Landscaping is present along road frontages. |
| Surface Water | None |
| Potable Water Source | East Bay Municipal Utilities District (EBMUD) |
| Sanitary Sewer Utility | Central Contra Costa Sanitary District (CCCSD) |
| Storm Sewer Utility | City of San Ramon |
| Electrical Utility | Pacific Gas & Electric Company (PG&E) |
| Natural Gas Utility | PG&E |
| Current Occupancy Status | The property is currently utilized for temporary contractor staging purposes. |
| Unoccupied Buildings/Spaces/Structures | No buildings are located at the property. However, a temporary storage trailer is present within the contractor staging area. |
| Number of Occupied Buildings | None |
| Building Name or General Building Description | Not applicable (N/A) |
| Number of Floors | N/A |
| Total Square Feet of Space (approximate) | N/A |
| Construction Completion Date (year) | N/A |
| Construction Type | N/A |
| Interior Finishes Description | N/A |
| Exterior Finishes Description | N/A |
| Cooling System Type | N/A |
| Heating System Type | N/A |

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A
 6200 Bollinger Canyon Road
 San Ramon, California

| PROPERTY IMPROVEMENTS | |
|-----------------------|--|
| Emergency Power | Portable diesel-powered generators are stored within the occupied construction staging area. |

3.5 Current Uses of Adjoining Properties

Current uses of the adjoining properties were observed to be as follows:

| Direction from Property | Address | Occupant(s) Name | Current Use | Potential Environmental Conditions |
|-------------------------------------|---|--------------------------------|---|------------------------------------|
| North | 2461 Camino Ramon | Bishop Ranch 3, parking garage | Parking garage | None |
| East, beyond Iron Horse Trail | 12501 Alcosta Boulevard | San Ramon Central Park | Community park | None |
| | 7000 Bollinger Canyon Road | San Ramon City Hill | Under construction as new city hall | None |
| South, beyond Bollinger Canyon Road | 1071 Market Place, to the southeast beyond Iron Horse Trail | Residence Inn Marriott | Extended stay hotel | None |
| | Not available | Not available | Undeveloped land, part of the San Ramon City Center Development Site | None |
| | Not available, to the southwest | Not available | Parking lot, part of the San Ramon City Center Development Site | None |
| West, beyond Camino Ramon | 2694 Camino Ramon | Not available | Commercial building, part of the San Ramon City Center Development Site | None |
| | 2600 Camino Ramon, to the northwest | Not available | Parking lot associated with a commercial building | Refer to Section 5.1.1 |

Please refer to Section 5.1.1 for discussion of regulatory database listings associated with adjoining property addresses.

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Sunset Development Company (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

The User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). ATC contracted Environmental Data Resources, Inc. (EDR) to perform an environmental lien search for the property. According to EDR, no environmental liens or AULs were identified for the property. A copy of the report is included in Appendix L.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

The User identified the current owner as the City of San Ramon and temporary occupant as Granite Construction.

4.6 Reason for Performing Phase I ESA

According to information provided by the User, this Phase I ESA will be used in connection with a commercial real estate transaction to identify *recognized environmental conditions* associated with the property.

4.7 Other User Provided Documents

The User provided no other documents as described in the ASTM Standard Practice E1527-13.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

| SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS | | | |
|---|---------------------------------|------------------|----------------|
| Regulatory Database | Approx. Minimum Search Distance | Property Listed? | # Sites Listed |
| Federal National Priority List (NPL) | 1 mile | No | 0 |
| Federal Delisted NPL | ½ mile | No | 0 |
| Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list | ½ mile | No | 0 |
| Federal CERCLIS No Further Remedial Action Planned (NFRAP) | ½ mile | No | 0 |
| Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS) | 1 mile | No | 0 |
| Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD) | ½ mile | No | 0 |
| Federal RCRA Generators | Property & Adjoining | No | 1 |
| Federal Institutional Control/Engineering Control Registry | Property | No | 0 |
| Federal Emergency Response Notification System (ERNS) list | Property | No | 0 |
| Facility Index System/Facility Registry System (FINDS) | Property | No | 0 |
| Integrated Compliance Information System (ICIS) | Property | No | 0 |
| State and Tribal NPL [RESPONSE and Bond Expenditure Plan (BEP)] | 1 mile | No | 0 |
| State and Tribal CERCLIS (ENVIROSTOR) | ½ mile | No | 1 |
| State and Tribal Landfill or Solid Waste Disposal Sites | ½ mile | No | 0 |
| State and Tribal Leaking Underground Storage Tanks (CA LUST) | ½ mile | No | 3 |
| California Spills, Leaks, and Incident Clean-Up (CA SLIC) | ½ mile | No | 0 |
| State and Tribal Registered Underground Storage Tanks (CA UST) Historical UST (CA HIST UST) list; California Facility Inventory Database (CA FID UST); and Statewide Environmental Evaluation and Planning System (CA SWEEPS UST) | Property & Adjoining | No | 1 |

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A
 6200 Bollinger Canyon Road
 San Ramon, California

| SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS | | | |
|--|---------------------------------|------------------|----------------|
| Regulatory Database | Approx. Minimum Search Distance | Property Listed? | # Sites Listed |
| State and Tribal Registered Aboveground Storage Tanks (AST) | Property & Adjoining | No | 1 |
| State and Tribal Institutional Control/Engineering Control Registry | Property | No | 0 |
| State and Tribal Voluntary Cleanup Site | ½ mile | No | 0 |
| State and Tribal Brownfield Sites | ½ mile | No | 0 |
| “Cortese” Hazardous Waste & Substances Sites List (CORTESE and HIST CORTESE) | ½ mile | No | 2 |
| Proposition 65 Records (Notify 65) | 1 mile | No | 0 |
| Contra Costa Co. Site List | ¼ mile | No | 13 |
| Hazardous Waste Manifests (HAZNET) | Property | No | 0 |

| EDR Manufactured Gas Plants (MGP) | 1 mile | No | 0 |
| EDR Historical Auto Stations | ¼ mile | No | 2 |
| EDR Historical Cleaners | ¼ mile | No | 0 |
| EDR Recovered Government Archives (CA RGA LUST) | Property | No | 0 |

5.1.1 Federal Agency Database Findings

The property was not identified in any of the federal agency databases searched.

The following listings with a known or significant potential for release and impact on the property were identified in the federal databases searched. State database listings associated with the nearby offsite facility are discussed below, along with corresponding federal database listings.

Pacific Bell / San Ramon W1245

2600 Camino Ramon / 2600 Camino Ramon, Rooms 2E150 and 2E050

Databases: RCRA-SQG, FINDS, SWEEPS UST, UST, HIST UST, AST, CHMIRS, EMI, and CONTRA COSTA CO. SITE LIST

Approximate Distance from the Property: Adjacent to the northwest, beyond Camino Ramon

Assumed Groundwater Gradient: Upgradient

Regulatory Data Summary: The facility is classified as a small quantity generator with no violations found. The FINDS database listing, associated with other listings, indicates that the facility is tracked by the Resource Conservation and Recovery Act (RCRA) and California Hazardous Waste Tracking System - Datamart databases. The HIST UST database lists one 10,000-gallon unspecified waste underground storage tank (UST) and one 11,763-gallon unleaded gasoline UST. The AST database lists a total of 10,000 gallons of unspecified material stored in aboveground storage tank(s). The CHMIRS database reported various incidents of relatively minor spills (e.g. hydraulic oil leak near compactor unit) or odor at the facility. The releases were reportedly contained and required no further action. According to the EMI database, various emissions have been permitted between at least 2002 and 2013. According to the CONTRA COSTA CO. SITE LIST database, the facility is a UST site, has aboveground storage, is a hazardous waste generator, and has a hazardous materials business plan (HMBP) program. No notable violations or material releases were reported.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the property. Given

the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.2 State and Tribal Database Findings

The property was not identified in any of the state or tribal agency databases searched.

State database listings associated with a nearby offsite facility were previously discussed above in Section 5.1.1 along with corresponding federal database listings. In addition to those discussed above, the following listings with a known or significant potential for release and impact on the property were identified in the state and tribal databases searched:

Valero #7-033

1091 Market Place

Databases: LUST, HIST CORTESE, SWEEPS UST, UST, EDR Hist Auto, HAZNET, CONTRA COSTA CO. SITE LIST, and ENF

Approximate Distance from the Property: 418 feet to the east

Assumed Groundwater Gradient: Cross- to upgradient (measured)

Regulatory Data Summary: According to the LUST and HIST CORTESE databases, a gasoline release impacted other groundwater (uses other than drinking water) and regulatory case closure was granted on February 16, 2000. The SWEEPS UST database lists one 12,000-gallon regular unleaded gasoline UST, one 12,000-gallon leaded gasoline UST, and one 12,000-gallon regular unleaded gasoline UST. The facility was listed on EDR Historical Auto database, as having been occupied by Exxon (2001) and Valero (2002 through 2012). According to the HAZNET database, the facility disposed of aqueous solution with total organic residues less than 10 percent, other organic solids, and other materials via offsite disposal methods. The facility is a UST site and hazardous waste generator (less than five tons per year), and has an HMBP program, according to the CONTRA COSTA CO. SITE LIST. The ENF database identified a UST program at the Exxon facility, with historical enforcement; an enforcement letter was provided and compliance was achieved on February 16, 2000.

ATC reviewed available records maintained on the Regional Water Quality Control Board (RWQCB) GeoTracker database (<http://geotracker.waterboards.ca.gov/>). Available records confirm that a gasoline release impacted other groundwater (uses other than drinking water) and regulatory case closure was granted on February 16, 2000. The closure letter indicates that a total of four groundwater monitoring wells were installed. Groundwater was encountered at depths ranging between 6.12 and 13.91 feet below ground surface (bgs), with a flow direction towards the southwest. The release was considered a low risk groundwater case. Groundwater monitoring wells were depicted at the site, only.

Discussion: Based on the closed LUST case status and absence of documented contamination migration offsite and/or toward the property, these listings are not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state and tribal agency databases searched are considered to represent a likely past, present or material threat of release in, on, or at the property. Given the physical setting characteristics of the property and surrounding area, supplemental agency file reviews were not warranted to verify the database report information.

5.1.3 Local Environmental Records Sources

Department of Toxic Substances Control

ATC requested files pertaining to the property from the Department of Toxic Substances Control (DTSC). According to Ms. Liang Yu Ma from the DTSC (December 31, 2015, written correspondence) no records were available for the property.

Furthermore, according to the DTSC EnviroStor database (<http://www.envirostor.dtsc.ca.gov/public>), the DTSC has no records pertaining to the property.

Regional Water Quality Control Board

ATC requested files pertaining to the property from the RWQCB. According to Ms. Melinda Wong from the RWQCB (January 8, 2016, telephone conversation), no files are available for the property.

Furthermore, according to the RWQCB GeoTracker database (<http://geotracker.waterboards.ca.gov/>), the RWQCB has no records pertaining to the property.

Bay Area Air Quality Management District

ATC contacted the Bay Area Air Quality Management District (BAAQMD) to review available information regarding the property. According to Ms. Rochelle Reed from the BAAQMD (December 28, 2015, written correspondence), no files are available for the property.

Local Health Department

ATC contacted the Contra Costa County Environmental Health Department (CCCEHD) to review available information regarding the property. According to Ms. Alex McMullen from the CCCEHD (December 28, 2015, written correspondence), no files are available for the property.

Fire Department

ATC contacted the San Ramon Valley Fire Protection District (SRVFPD) to review available information regarding the property. Available records included plan review and inspection records for a Hop Festival event held at the property in 2013. No violations or releases were reported and ATC's review of SRVFPD records identified no environmental concerns.

Department of Planning and Zoning

According to the City of San Ramon Planning Department (SRPD), the property is currently zoned as CCMU (City Center Mixed Use).

Building Department

ATC reviewed available building department records maintained at the City of San Ramon Building Department (SRBD). Available records are discussed in Section 5.3.7.

Electrical Utility Company

According to the SRPD, PG&E provides electric utilities to the property. Please refer to Section 6.6 for further information on the potential presence of PCB-containing electrical equipment on the property.

Water Utility

Potable water in the property vicinity is provided by EBMUD. ATC reviewed the 2014 Water Quality Report produced by EBMUD. Most of the year, the drinking water comes from Pardee Reservoir in the Sierra Nevada mountains. Some parts of EBMUD's service area draw water year-round from EBMUD's Sierra Nevada supply. During times of high water demand, system maintenance or for operational needs, drinking water may come from local watersheds and may be treated at a different facility. The property vicinity appears to be located in an area served by water sourced from the Pardee Reservoir and treated at the Walnut Creek water treatment plant. No concerns were noted during the review of EBMUD data. EBMUD water meets or exceeds all federal and state water quality regulations, including those for lead. A copy of EBMUD's 2014 Annual Water Quality Report is included in Appendix L.

Sewer Utility

ATC confirmed that the City of San Ramon provides municipal storm sewer utilities and the CCCSD provides sanitary sewer utilities to the property vicinity.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Map Series, *Diablo, California, Quadrangle* Topographic Map, 2012, the property is located approximately 443 feet above mean sea level (MSL) and has a sloping topography towards the southeast.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

Based on the California Department of Conservation, *California Geological Survey, Generalized Geologic Map of California Note 17*, dated April 2002, the property is primarily underlain by Tertiary sedimentary rocks. Sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental). Tertiary sedimentary rocks include sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin.

5.2.3 Soils

According to ATC's review of the United States Department of Agriculture Soil Conservation Service *Web-Based Soil Survey*, the western portion of the property is underlain by Clear Lake clay, the eastern portion is underlain by Pescadero clay loam, and the southern portion is underlain by Conejo clay loam. The Clear Lake clay series consists of poorly drained soils formed from clayey alluvium derived from metamorphic and sedimentary rock. Slopes range from 0 to 15 percent. The Pescadero clay loam series consists of poorly drains soils formed from alluvium derived from sedimentary rock. Slopes range from 0 to 2 percent. The Conejo clay loam series consists of well drained soils formed from alluvium derived from sedimentary rock. Slopes range from 0 to 2 percent. A copy of the soil map is included in Appendix L.

5.2.4 Hydrology

Considering the surface topography for the property area, as interpreted from the *Diablo, California Quadrangle* map, local groundwater would be expected to flow toward the southeast. Therefore, in

assessing potential off-site environmental impacts, facilities located directly northwest of the property are of primary concern. However, actual groundwater flow direction is often locally influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, production wells, and other factors beyond the scope of this study. The actual groundwater flow direction under the property can be accurately determined only by installing groundwater monitoring wells, which was beyond the scope of this project.

Information obtained from the Federal USGS (FED USGS) Well Information database included in the EDR database report, indicated that five wells are located within approximately one mile of the property. Groundwater in these wells, was measured at depths ranging between 13.0 and 115.0 feet bgs. ATC also reviewed well information on the Gregg Drilling website (<http://www.greggdrilling.com>) which indicated that the depth to groundwater in San Ramon ranges between 9.0 and 22.0 feet bgs.

5.2.5 Other Physical Setting Sources

Flood Plain Map

According to the Federal Emergency Management Agency (FEMA), the property is located in Flood Zone X, identified by FEMA as “areas determined to be outside [of] the 0.2% annual chance floodplain,” (Flood Insurance Rate Map [FIRM] Map Number 06013C0464F, dated June 16, 2009). A copy of the FIRM is included in Appendix L.

Wetlands Map

Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (online Wetlands Mapper), there are no jurisdictional wetlands on the property. Furthermore, ATC did not observe any areas suggestive of wetlands at the property. A copy of the National Wetlands Inventory map is included in Appendix L.

5.3 Historical Records Sources

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

| HISTORICAL USE SUMMARY | | | | |
|------------------------|-----------------------------|---|--|---|
| Period | Identified Historical Uses | | Source(s) | Intervals/Comments |
| | Property | Surrounding Area | | |
| Prior to 1940 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Railroad Tracks | Aerial Photograph Topographic Maps | The earliest record available was a topographic map dated 1896. No <i>significant data gaps</i> identified. |
| 1940 - 1960 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Railroad Tracks | Aerial Photographs Topographic Maps | No <i>significant data gaps</i> identified. |
| 1961 - 1980 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Railroad Tracks | Aerial Photographs Topographic Maps | No <i>significant data gaps</i> identified. |

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Bishop Ranch 3A
6200 Bollinger Canyon Road
San Ramon, California

| HISTORICAL USE SUMMARY | | | | |
|------------------------|-------------------------------------|--|--|---|
| Period | Identified Historical Uses | | Source(s) | Intervals/Comments |
| | Property | Surrounding Area | | |
| 1981 - 2000 | Undeveloped Agricultural | Undeveloped Agricultural Residential Commercial Park | Aerial Photographs City Directories | No <i>significant data gaps</i> identified. |
| 2001 - present | Undeveloped Construction Staging | Undeveloped Commercial Park | Aerial Photographs Tax Files Topographic Map City Directories Building Department Zoning Department | No <i>significant data gaps</i> identified. |

The property was historically utilized for agricultural purposes. Based on the historical agricultural usage of the property, pesticides and/or herbicides may have been utilized on the property and near-surface soils may have at one time contained these compounds; however, evidence of large scale pesticides and/or herbicides use, storage or mixing was not observed during review of historical sources.

5.3.1 Aerial Photographs

ATC obtained available aerial photographs of the property and surrounding areas from EDR. Available aerial photographs ranged from 1939 to 2012. The following are descriptions and interpretations from the aerial photograph review. Copies of reproducible aerial photographs are included in Appendix F.

| AERIAL PHOTOGRAPH SUMMARY | | |
|--|-------------------|--|
| Year | Scale | Comments |
| 1939, 1946, 1949, 1950, 1959, 1966, and 1968 | 1 inch = 500 feet | Property: Undeveloped and/or agricultural land. Surrounding Area: Undeveloped and/or agricultural land with what appear to be residential or commercial structures located further to the north. |
| 1979 | 1 inch = 500 feet | Property: Generally the same as the previous aerial photograph. Surrounding Area: Generally the same as the previous aerial photograph, with the exception of Bollinger Canyon Road depicted to the south. |
| 1982 | 1 inch = 500 feet | Property: Generally the same as the previous aerial photograph. Surrounding Area: Generally the same as the previous aerial photograph, with the exception of the construction of commercial development to the west (and further to the southwest) and residential development further to the northeast. |
| 1993 and 1998 | 1 inch = 500 feet | Property: Undeveloped land. Surrounding Area: Undeveloped land to the north and south. Areas to the east and west appear to be developed in its current configuration. The existing road configuration is present. |
| 2005, 2006, 2009, 2010, and 2012 | 1 inch = 500 feet | Property: Generally depicted in its current configuration. Surrounding Area: Generally depicted in its current configuration. |

The review of aerial photographs did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.2 Fire Insurance Maps

ATC requested copies of historical Sanborn Fire Insurance Maps (Sanborn Maps) depicting the property and surrounding area from EDR. According to EDR, Sanborn Map coverage of the property is not available. A copy of EDR's "unmapped property" letter is included in Appendix G.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A
 6200 Bollinger Canyon Road
 San Ramon, California

5.3.3 Property Tax Files

ATC reviewed available tax files maintained at the Contra Costa County Assessor's Office for historical ownership information of the property. Documentation is included in Appendix G.

| TAX RECORDS OWNERSHIP SUMMARY | |
|--|---------------------------|
| Owner | Date |
| City of San Ramon, a municipal corporation | June 2001 to present |
| Sunset Land Company, LLC, a California limited liability company | Unknown date to June 2001 |

The review of tax files did not identify past uses indicating *recognized environmental conditions* at the property.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

ATC reviewed historical topographic maps obtained from EDR dated 1896, 1898, 1943, 1953, 1968, 1973, 1980, and 2012. The historical topographic maps were reviewed with the intent to evaluate changes in land use and areas of potential environmental concern visible at the property.

Between 1896 and 1898, the property vicinity was generally depicted as undeveloped land. By 1943, agricultural land was depicted to the west, railroad tracks (San Ramon Branch) were located to the east, and small unspecified structures were depicted further to the north. By 1953, the property and surrounding areas to the north, south, and west were depicted as agricultural land. Railroad tracks (Southern Pacific) were depicted to the east. By 1973, agricultural land was no longer depicted at the property. In 1980, the property vicinity was generally depicted as undeveloped land. Bollinger Canyon Road was depicted to the south, a railroad grade area was located to the east, and small unspecified structures were depicted further to the north. In 2012, the property vicinity was depicted as generally undeveloped land. The existing road configuration was present.

Documentation is included in Appendix G. The review of historical USGS Topographic Maps did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area.

5.3.6 City Directories

Research regarding the availability of historical city directories was conducted by EDR. The following are descriptions and interpretations from the historical city directory review. Documentation is included in Appendix G.

| CITY DIRECTORY SUMMARY | |
|------------------------|---|
| Year | Comments |
| 1975 – 1980 | Property: No listings Surrounding Area: No listings |
| 1985 – 1992 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park |
| 1995 | Property: No listings Surrounding Area: No listings |

PHASE I ENVIRONMENTAL SITE ASSESSMENT
 Bishop Ranch 3A
 6200 Bollinger Canyon Road
 San Ramon, California

| CITY DIRECTORY SUMMARY | |
|------------------------|---|
| Year | Comments |
| 1999 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park 6101 Bollinger Canyon Road: Office building 6111 Bollinger Canyon Road: Office building |
| 2003 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park |
| 2008 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park 6101 Bollinger Canyon Road: Chevron office building 6111 Bollinger Canyon Road: Multi-tenant office building 6121 Bollinger Canyon Road: Multi-tenant office building |
| 2013 | Property: No listings Surrounding Area: 6001 Bollinger Canyon Road: Chevron Corp. Office Park 6101 Bollinger Canyon Road: Multi-tenant office building 6111 Bollinger Canyon Road: Multi-tenant office building 6121 Bollinger Canyon Road: Pacific Gas & Electric Company |

The review of city directories did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding areas.

5.3.7 Building Department Records

ATC reviewed available historical building department records maintained at the SRBD for information regarding past uses of the property and surrounding area. Minimal available permits pertain to electrical permitting (2009), signage (2002), and planning review (2002). No records were available for prior onsite structures.

The review of building department records did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding area. Documentation is included in Appendix G.

5.3.8 Zoning/Land Use Records

According to the SRPD, the property is currently zoned as CCMU, defined as City Center Mixed Use, which appears to be appropriate for the current use. No historical zoning information was available for the property. However, Cardno ATC's research indicates that the property was historically utilized for agricultural purposes.

5.3.9 Prior Reports

No prior reports were made available for review.

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

Ms. Audrey Lundin, ATC Due Diligence Services Manager, conducted the site reconnaissance on January 7, 2016 and was unescorted during the site reconnaissance. The site reconnaissance consisted of visual and/or physical observations of: the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Unimproved portions of the property were observed along the perimeter and in a general grid pattern in safely accessible areas, if accessible and possible. Weather conditions at the time of the site reconnaissance were cool and cloudy with no visibility limitations.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC observed the storage of hazardous substances on the property, within the construction staging area occupied by Granite Construction. In general, retail packages of maintenance products were observed to be stored within a temporary trailer, within flammable cabinets, and on trucks/vehicles within the staging area.

A storage container for a radioactive equipment item was observed within the trailer.

Piles of asphalt, gravel, sand, and dirt were observed within the staging area.

One five-gallon bucket of oily material was observed along the southeastern portion of the staging area. The uncovered bucket appeared to have overflowed during recent rains, resulting in oil stains on soil and distressed vegetation. The area of soil/vegetation impact appeared to be approximately 10 square feet or greater in size.

One five-gallon bucket of oily sludge material was observed along the northern side of the storage trailer. The uncovered bucket appeared to have overflowed during recent rains. Minor oil staining was observed on items stored in the vicinity, as well as underlying soil.

An additional uncovered five-gallon bucket of oily material was observed near the northeastern cover of the trailer. Although it likely overflowed, no notable stains were readily observed on the underlying soil.

A light oil sheen was observed on rainwater puddles within the construction staging area.

Limited areas of oil staining within the vicinity of the currently occupied construction staging area are considered to represent a *de minimis* condition to the property.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property.

6.4 Aboveground Storage Tanks (ASTs)

ATC did not observe evidence of ASTs on the property.

6.5 Other Petroleum Products

ATC observed evidence of the use, storage or disposal of other petroleum products in, on or at the property

as summarized below. Small internal diesel tanks are likely present within portable emergency generators. Equipment stored in the construction staging area may contain hydraulic fluid and gasoline/diesel fuel. Equipment appeared to be newer in age and no notable spills were observed.

The temporary presence of the listed petroleum containing equipment is not considered to represent a *recognized environmental condition* to the property, based on the absence of notable spills or releases within the equipment vicinity.

6.6 Polychlorinated Biphenyls (PCBs)

ATC observed underground transformer vaults/electrical features located along the landscaped portions of the property. The transformer units/features are owned and operated by PG&E, which is responsible for the maintenance of the transformer units. Given the utility ownership and observed conditions, the electrical transformers are not considered to represent an environmental concern to the property at this time. Furthermore, given the age of the property improvements, it is not considered likely that the transformer fluid contains PCBs.

No other suspect PCB-containing equipment was observed at the property at the time of the site reconnaissance.

6.7 Unidentified Substance Containers

As discussed in Section 6.2, ATC observed evidence of three uncovered five-gallon buckets containing oily materials. Oil stains were generally observed on underlying soil. Limited areas of oil staining within the vicinity of the currently occupied construction staging area are considered to represent a *de minimis* condition to the property.

6.8 Nonhazardous Solid Waste

ATC observed evidence of the generation, storage or disposal of nonhazardous solid waste in, on or at the property as summarized below. One 40-yard dumpster is located within Granite Construction's staging area. Labels indicate that Ferma Corporation provides "Green Box Service" of the dumpster.

Limited areas of non-hazardous trash/debris (plastic wrappers) were observed at the property. The observed trash/debris dumped on the property is considered to represent a *de minimis* condition to the property.

6.9 Wastewater

ATC observed evidence of wastewater generated, treated or discharged (including sanitary sewage and stormwater) in, on or at the property or to adjoining properties as summarized below.

| WASTEWATER SUMMARY TABLE | | | |
|--------------------------|--------------------|-------------------|----------------|
| Type of Wastewater | Generation Process | Treatment System? | Discharged To? |
| Stormwater | Stormwater runoff | No | Storm sewer |

The generation and discharge of wastewater at the property is not considered to represent an environmental condition.

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons in, on or at the property.

6.11 Drains and Sumps

ATC did not observe evidence of drains or sumps in, on or at the property, with the exception of storm drains.

6.12 Septic Systems

ATC did not observe evidence of a septic system in, on or at the property.

6.13 Stormwater Management System

Stormwater with gathers on the property infiltrates the ground or flows toward catch basins.

6.14 Wells

ATC did not observe evidence of wells in, on or at the property.

7.0 SUBSURFACE VAPOR MIGRATION

ATC conducted a limited screening for potential vapor encroachment conditions (VECs) that may affect the property. The VEC screening focused on the current and historical usage of the property and also utilized the aforementioned regulatory agency database report provided by EDR and an EDR Vapor Encroachment Screen (VES) Report to evaluate identified Chemicals of Concern (COCs), including petroleum hydrocarbons. To identify the area of concern (AOC) for contaminated sites with non-petroleum hydrocarbon COCs, ATC utilized the approximate minimum search distance defined by ASTM E 2600-10 of 1,760 feet (1/3 mile) from the property boundary for COC-contaminated sites. For sites contaminated with petroleum hydrocarbon COCs, ATC utilized the AOC approximate minimum search distance of 528 feet (1/10 mile). The AOC was adjusted accordingly based on review of physical setting characteristics, known release information, property and land features, groundwater flow direction, and soil type, et al.

ASTM's Vapor Encroachment guidance indicates that when groundwater flow direction can be estimated or determined, the cross-gradient or downgradient radius distances can be significantly reduced. The EDR VES report calculates the reduced AOC distances when considering groundwater flow direction by utilizing the following default distances, which were determined using the Buonicore Methodology: (non-petroleum hydrocarbon COCs) 1,760 feet in the upgradient direction; 365 feet in the cross-gradient direction; and 100 feet in the downgradient direction and (petroleum hydrocarbon COCs) 528 feet in the upgradient direction; 165 feet in the cross-gradient direction if Light, Non-Aqueous Phase Liquid, (LNAPL i.e. floating product) is suspected; 95 feet in the cross-gradient direction if no LNAPL is suspected; 100 feet in the downgradient direction (LNAPL suspected); and 30 feet in the downgradient position (LNAPL not suspected).

ATC reviewed potential sources of COCs from the facilities reported on the EDR database report and VES report.

No VECs were identified in relation to the property.

8.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

| INTERVIEW SUMMARY | | | | |
|----------------------|------------------|--|----------------------------|-----------------------------------|
| Role | Name | Title/Company | Years Assoc. With Property | Interview Type |
| Owner / Site Contact | Theresa Peterson | Associate Engineer / City of San Ramon | Unknown | In person Telephone Written |

Not included in this listing are those governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have first-hand knowledge of *recognized environmental conditions* at the property.

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Materials (ACM)

No buildings are present at the property. Therefore, consideration of ACM was not included in the scope of work for this ESA.

9.2 Radon

Radon is a naturally-occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

Cardno ATC's review of published radon data indicates that the property is located in U.S. EPA Radon Zone 2, an area of moderate propensity with regard to the potential for elevated levels of radon gas. Zone 2 areas have predicted radon concentrations between 2 and 4 pCi/L. Out of 41 sites in the property vicinity (zip code 94583) tested for radon, three of the results were above 4.0 pCi/L. Given the available statistics and the undeveloped/staging area usage of the property improvements, radon is not considered to represent a concern, and no additional action or investigations are recommended.

9.3 Lead in Drinking Water

ATC confirmed with the EBMUD that the municipally-supplied water meets all drinking water standards, including those for lead. Lead in drinking water testing was not conducted for this Phase I ESA. No buildings are present at the property.

9.4 Lead-Based Paint (LBP)

No buildings are present at the property. Therefore, consideration of LBP on painted surfaces was not included in the scope of work for this ESA.

9.5 Mold Screening

No buildings are present at the property. Therefore, consideration of mold was not included in the scope of work for this ESA.

9.6 Additional User Requested Conditions

No additional User requested services were included in the scope of work for this ESA.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

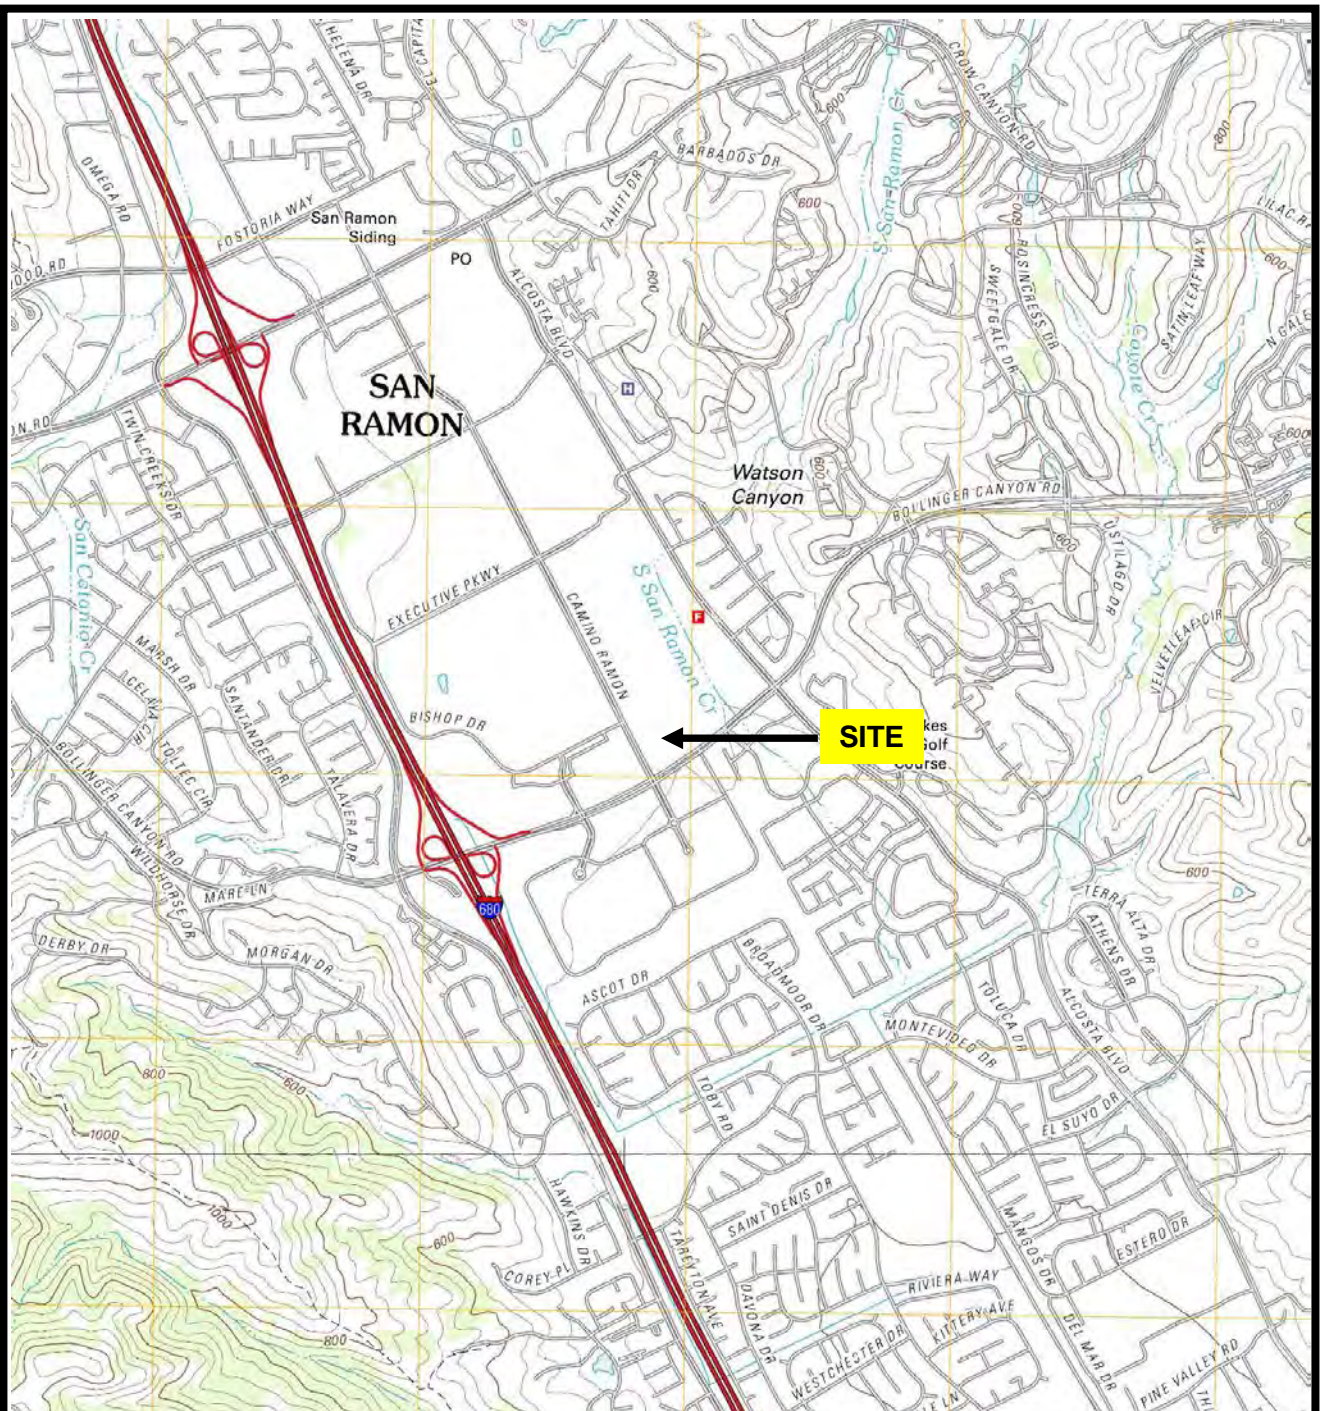

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1

EXECUTIVE SUMMARY

RCRA-LQG site within approximately 0.25 miles of the target property.

| <u>Equal/Higher Elevation</u> | <u>Address</u> | <u>Direction / Distance</u> | <u>Map ID</u> | <u>Page</u> |

| AT&T MOBILITY/CHEVRO | 6001 BOLLINGER CANYO | SW 1/8 - 1/4 (0.187 mi.) | E16 | 38 |

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/07/2015 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 10/21/2015 has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that

EXECUTIVE SUMMARY

there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

| Description: | 7 employees at the Pacific Bell Office complained of light headedness, nauseous for a gasoline type smell. They are being examined at scene - unknown if they will be transported to a medical facility for further evaluations. An unknown number of employees have been evacuated. She will call back with the number of evacuees. There is an underground gasoline storage tank being removed near the building. |

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

TSCA SUBMITTER

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

GREENHOUSE GAS REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

BISHOP RANCH 3A
6200 BOLLINGER CANYON ROAD
SAN RAMON, CA 94583

TARGET PROPERTY COORDINATES

Latitude (North): 37.7642 - 37° 45' 51.12"
Longitude (West): 121.9567 - 121° 57' 24.12"
Universal Tranverse Mercator: Zone 10
UTM X (Meters): 591895.1
UTM Y (Meters): 4179960.2
Elevation: 443 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5640382 DIABLO, CA
Version Date: 2012

South Map: 5640384 DUBLIN, CA
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| | |
|-------------------------------|--|
| <u>Target Property County</u> | <u>FEMA Flood Electronic Data</u> |
| CONTRA COSTA, CA | YES - refer to the Overview Map and Detail Map |

Flood Plain Panel at Target Property: 06013C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

| | |
|------------------------------------|--|
| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
| DIABLO | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|----------------|------------|
| Search Radius: | 1.25 miles |
| Status: | Not found |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| 4 | 1/2 - 1 Mile NE | Not Reported |
| 6 | 1/2 - 1 Mile NNW | Not Reported |

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PESCADERO

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 168 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|------------------------------------|--|--|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 5 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 4 Min: 1.4 | Max: 8.4 Min: 6.1 |
| 2 | 5 inches | 42 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 0.42 Min: 0.01 | Max: 9 Min: 7.9 |
| 3 | 42 inches | 66 inches | stratified silt loam to silty clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 4 Min: 1.4 | Max: 9 Min: 7.9 |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: CLEAR LAKE

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|--|---|---|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 29 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 6.1 |
| 2 | 29 inches | 59 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 1.4 Min: 0.42 | Max: 8.4 Min: 7.4 |

Soil Map ID: 3

Soil Component Name: CONEJO

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|--|---|--|----------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 27 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 4 Min: 1.4 | Max: 7.3 Min: 6.1 |
| 2 | 27 inches | 59 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay | Max: 4 Min: 1.4 | Max: 7.3 Min: 6.1 |

Soil Map ID: 4

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cardno ATC #75 were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

Limited Permission To Make Copies

Cardno ATC #75 (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Cardno ATC #75 on Dec 28, 2015.

TARGET PROPERTY

6200 Bollinger Canyon Road
San Ramon, CA 94583

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

San Ramon, California

APPENDIX I
RESUMES

PROFESSIONAL SUMMARY

Ms. Lundin has experience performing and managing Phase I Environmental Site Assessments (ESAs), Transaction Screen Assessments (TSAs), Property Condition Assessments (PCAs), and industrial hygiene investigations. She develops report templates in support of due diligence and industrial hygiene service lines. Ms. Lundin is responsible for leading staff scientists, industrial hygienists, project managers, field technicians, and subcontractors, as well as coordinating large-scale microbial remediation oversight contracts.

PROJECT EXPERIENCE

Market Sector

- **Modified Environmental Site Assessments and FCC-Required Environmental Compliance Studies / Telecommunications Sector / California and Nevada.** Performed and managed over 200 Modified Phase I ESAs or FCC-required environmental compliance studies in support of telecommunication service expansion and antenna placement.
- **Environmental Site Assessments / Agricultural, Residential, Commercial, Industrial, and Government Sectors / Northern California.** Performed and managed ASTM-compliant ESAs in support of pending real estate transactions. Completed a Phase I ESA for a 12.9-acre site in San Rafael that was previously utilized as a manufactured gas plant, corporation yard, and gasoline service station; each of the prior uses had contributed to onsite contamination which required further action. Performed a Phase I ESA of a 123-acre site in Salinas which was previously utilized as a tire-manufacturing plant and was delisted from the National Priority List.
- **Transaction Screen Assessments / Education, Residential, Commercial, and Industrial Sectors / Northern California.** Performed and managed ASTM-compliant TSAs and developed a report template that complies with the revised ASTM standard and current SBA guidelines.
- **Property Condition Assessments / Residential, Commercial, and Industrial Sectors / Northern California.** Performed PCAs to include observation and report of the physical condition and maintenance of a property and its improvements. PCA reports addressed items significant for the continued operation of a facility in its current usage and occupancy, consistent with comparable properties of similar age. One PCA included an assessment of a 44-acre marina in Alameda which contained 10 piers, 530 berths, and approximately 37 buildings constructed between the early 1900's and 1984.
- **Combustible Materials Assessment / Data Center / San Jose, CA.** Developed a scope of work/report template and completed the combustible materials assessment. The report was well-received by City of San Jose Fire Department staff who commented on its thoroughness and accuracy.
- **Indoor Air Quality, Odor, and Microbial Investigations / Education, Residential, Commercial Industrial, and Government Sectors / Northern California.** Performed indoor air quality, odor, and microbial investigations at numerous site buildings and campuses throughout the San Francisco Bay Area. Investigations included visual inspections, HVAC inspections, collection of indoor air quality measurements, bulk and/or air sample collection, interpretation of findings and analytical results, report preparation, and site-specific remediation strategies.
- **Asbestos, Lead, and Dust Air Monitoring / Construction, Education, Residential, Commercial, and Industrial Sectors / Northern California.** Conducted air monitoring and oversight of construction, emergency spill/release cleanup, or abatement activities. Directed subcontractors and responded to emergency situations in adherence with the established scope of work. Recommended scope

modifications in response to tenant concerns. Represented the environmental consulting company at regularly scheduled board meetings regarding abatement status.

- **Limited, Comprehensive, and Demolition ACM Surveys / Education, Residential, Commercial, and Industrial Sectors / Northern California and Oregon.** Identified, quantified and sampled suspect asbestos-containing materials (ACMs). Interpreted laboratory analytical data and provided recommendations to the client, in report format, for ACM management procedures.
- **AHERA Surveys / Education Sector / Northern California.** Re-inspected asbestos-containing building materials within multiple district campuses according to AHERA protocol. Photographed areas of concern and provided recommendations to clients, in report format, for ACM management procedures.
- **Spill Prevention, Control, and Countermeasure (SPCC) Plan / Data Center / San Francisco, CA.** Completed an SPCC plan for a light industrial data center with several backup generators and aboveground storage tanks.
- **Groundwater Monitoring / Commercial and Industrial Sectors / Northern California.** Performed groundwater monitoring activities in accordance with scheduled monitoring events designed to evaluate groundwater contamination at petroleum service stations and industrial facilities.

PROFESSIONAL REGISTRATIONS

- Certified Asbestos Consultant, State of California, Division of Occupational Safety and Health (CA, #09-4483, 2009)

EDUCATION

- B.S., Environmental Science with a Biological Emphasis, University of California, Berkeley, CA, 2004

TRAINING AND CERTIFICATIONS

- OSHA 40-Hour Hazardous Waste Operations Training and Refresher (CA, 2015)
- 16-Hour Microbial Investigations, Assessments and Remediation in the Indoor Environmental Training Course conducted by ATC (CA, 2008)
- Medic First Aid and CPR Training (CA, 2009)

PROFESSIONAL AFFILIATIONS

- Commercial Real Estate Women, East Bay Chapter – Membership Committee Co-Chair

Summary of Experience

Mr. Stivala has over 20 years of environmental management. He manages environmental site assessments, remedial alternative testing, and environmental support for construction and demolition projects. He is adept at negotiating environmental solutions with regulators, attorneys and clients. In his capacity as a senior environmental professional, he has managed environmental programs in the oil & gas and aviation industries. Mr. Stivala's regional experience spans California, Oregon, Washington, Florida, and Georgia.

Mr. Stivala is well-versed in the management and preparation of a range of technical reports including site investigation work plans, corrective action plans, remedial action plans, feasibility studies, site conceptual models, groundwater monitoring reports, and Phase I & II ESAs. Mr. Stivala's environmental field techniques includes drilling via hollow-stem auger, direct-push, mud rotary, air rotary, and cone penetrometer testing. He is skilled in aquifer testing media sampling. Mr. Stivala has implemented several remedial alternatives including multi-phase extraction, airsparging, bioventing, pump & treat, in situ chemical oxidation, surfactant application, and excavation.

Mr. Stivala is dedicated to protecting workers' well-being by fostering a strong culture of health and safety in the workplace. Mr. Stivala has extensive experience with behavior-based health & safety philosophies such as the Loss Prevention System. He has led near-loss investigations, performed field safety observation and feedback sessions as well as tracked company's regional use of health & safety documentation tools.

Significant Projects

- > Retail Petroleum Portfolio Management / Western U.S. From 2005 to present. Managed large portfolios for Phillips 66 Company, ConocoPhillips, ExxonMobil, and Chevron Environmental Management Company sites. Responsible for stewarding teams of project managers and scientists in the assessment and remediation of petroleum-impacted sites of varying sizes. Personally managed portfolio of over 40 projects at a time. Sites consist of bulk fuel terminals and service stations. Implemented assessment technologies, such as Membrane Interface Probe, Rapid Optical Screening Tool, and Ultraviolet Induced Fluorescence. Managed implementation of remedial alternatives including multi-phase extraction, air sparging, bio sparging, in situ chemical oxidation, and surfactant application. Presented remedial action plans to Chevron's in-house remediation review team. Versed in Chevron's Incident Reporting Protocol and have led Loss Prevention System (LPS) Near Loss Investigations, prepared Loss Prevention Observations, and led feedback sessions. Tracked company's regional use of LPS tools.
- > Airport Facility Site Assessment & Remediation / Nationwide. Managed large-scale contamination assessment and remediation projects at San Francisco, Oakland, Sacramento and Miami Airports from 1991 to 2008.

Contaminants included petroleum, chlorinated solvents, and metals. Performed jet fuel bulk storage facilities assessments at San Francisco and Oakland International Airports. Major clients include United Airlines, SFO Fuel, PS Trading, and Dade County Aviation Department. Interfaced with airport and regulatory agency officials. Coordinated “air-side” activities under expedited schedules. Performed fuel-hydrant line closures and provided environmental support for airport facilities modification projects.

- > Fractured Bedrock Investigation / San Francisco Airport. Field manager for bedrock drilling project. Supervised drilling of multilevel monitoring wells up to 500 feet deep into fractured bedrock as part of a chlorinated solvent assessment. Down-hole geophysical logging was performed to identify fracture zones. Logging included caliper, resistivity, gamma, and video logging. Wells were drilled using a mud and air rotary rig.
- > Aviation Fuel Storage Facilities Demolitions / San Francisco, Oakland Airports and Sacramento. Program manager for the decommissioning of aviation fuel distribution facilities. Orchestrated demolition of bulk jet fuel storage tank facilities and subsequent assessment and remediation. Negotiated with regulatory authorities and outside consultants. Remediation at San Francisco International Airport included excavation and in situ chemical oxidation. One project included a large excavation of soil impacted with jet fuel and PCBs.
- > Former Solvent Packaging Facility Remediation, Union City, CA. Maintained a large groundwater/soil remediation system located at a former solvent packaging facility. Chlorinated solvent contamination from the facility extended a quarter mile offsite and was captured using 22 groundwater extraction wells pumping from two separate aquifers. Air treatment was performed using a resin absorption unit.
- > Railroad Facilities Assessment and remediation/ Western United States. Managed environmental site assessment projects at Union Pacific Railroad sites in California and Oregon. Projects consisted of assessments of petroleum, solvents, metals, and pesticides contamination.

- > OSHA 40-Hour Hazardous Waste Operations Training
- > OSHA 8-Hour Hazardous Waste Operations Supervisor Training
- > Loss Prevention System (LPS) Training
- > BATC Refinery Safety Training

Training

Dear Mr. Lundin:

We have received your Public Records Act Request for information from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site(s) referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: <http://www.envirostor.dtsc.ca.gov/public>. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions, would like further information regarding your request or would like an appointment to visit Berkeley's Central Files, please contact me at (510) 540-3800.

Sincerely,

Liang Yu Ma

Regional Central Files Coordinator

Subject: Records Request

Hi Audrey:

We have no records for 6200 Bollinger Canyon Rd, San Ramon. Our records go back to 1986, anything prior to that would be the jurisdiction of the local fire department.

Happy Holidays,

Alex McMullen

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Contra Costa County, California
 Survey Area Data: Version 12, Sep 18, 2015

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 11, 2015—Jun 17, 2015

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

| Contra Costa County, California (CA013) | | | |
|---|--|--------------|----------------|
| Map Unit Symbol | Map Unit Name | Acres in AOI | Percent of AOI |
| Cc | Clear Lake clay, 0 to 15 percent slopes, MLRA 15 | 4.9 | 45.2% |

Elevation: 0 to 1,060 feet
Mean annual precipitation: 13 to 32 inches
Mean annual air temperature: 57 to 61 degrees F
Frost-free period: 260 to 300 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Clear lake and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Clear Lake

Setting

Landform: Basin-floor remnants
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Clayey alluvium derived from metamorphic and sedimentary rock

Typical profile

Ap - 0 to 5 inches: clay
Ass - 5 to 20 inches: clay
Bss - 20 to 30 inches: clay
Bkss1 - 30 to 46 inches: clay
Bkss2 - 46 to 60 inches: clay

Properties and qualities

Slope: 0 to 15 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat):
Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: Frequent
Calcium carbonate, maximum in profile: 4 percent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.5 to 3.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 7.0
Available water storage in profile: Moderate (about 8.6 inches)

Interpretive groups

EAST BAY MUNICIPAL UTILITY DISTRICT

2014 ANNUAL WATER QUALITY REPORT

DROUGHT ALERT

Our water supply is critically low for 2015.

The drought continues. Tougher measures and more emergency supplies are needed. Please visit ebmud.com/drought for the latest information on water supplies and tips to conserve.

EBMUD is proud to report that in 2014, your drinking water surpassed every state and federal public health requirement.

YOUR WATER

In the East Bay, 1.3 million customers rely on high-quality EBMUD water. Almost all of EBMUD's water comes from the 577-square mile watershed of the Mokelumne River on the western slope of the Sierra Nevada. This area is mostly national forest, EBMUD-owned lands and other undeveloped lands little affected by human activity.

The Mokelumne watershed collects snowmelt from Alpine, Amador and Calaveras counties, which flows into Pardee Reservoir near the town of Valley Springs. During times of high water demand, system maintenance or for operational needs, EBMUD may draw water from local watersheds. During drought emergencies, EBMUD may use water from the Sacramento River to meet customer needs.

Three large aqueducts carry water 90 miles from Pardee Reservoir to the East Bay. EBMUD's network of reservoirs, pipelines, pumps and water treatment plants are put to work to provide great water quality every day, as reflected in this report.

Dismal precipitation in 2014 meant EBMUD reservoirs did not refill back to normal levels. EBMUD used supplemental water supplies from the Sacramento River for the first time.

In early summer, 23,000 acre-feet of Sacramento River water was diverted into Upper San Leandro and San Pablo reservoirs in the East Bay — about a month's supply. A half-billion dollar investment by ratepayers for dry-year infrastructure combined with solid efforts by customers to conserve precious water helped us weather one of the driest years in California history. Drought conditions have worsened. Visit ebmud.com/drought for the latest news.

HOW WE MANAGE WATER QUALITY

Regardless of source, all water is treated at an EBMUD water treatment plant before it reaches your tap.

EBMUD takes many steps to ensure high water quality including managing watershed lands and reservoirs, treating the water, operating a complex distribution system, maintaining facilities and addressing customer concerns.

In laboratories and in the field, EBMUD samples and tests your water extensively to ensure it is safe to drink. We look for more than 100 substances including microorganisms, pesticides, herbicides, asbestos, lead, copper, petroleum products and by-products of industrial and water treatment processes. More than 20,000 laboratory tests each year ensure the safety of your drinking water.

WHERE YOUR WATER IS TREATED

Most of the year, your drinking water comes from Pardee Reservoir in the Sierra Nevada mountains. Before reaching your tap, most water is treated at a facility in Walnut Creek, Orinda or Lafayette.

Some parts of EBMUD's service area draw water year-round from EBMUD's Sierra Nevada supply. During times of high water

demand, system maintenance or for operational needs, drinking water may come from local watersheds and may be treated at a different facility. Some customers receive water from multiple sources at different times of the year.

WHAT WAS DETECTED AND REPORTED

In 2014, EBMUD treated raw water from multiple sources, including Sacramento River water, and consistently provided high-quality drinking water, surpassing every public health requirement set by the State Water Resources Control Board (State Board) and the U.S. Environmental Protection Agency.

Drinking water requirements were formerly set by the California Department of Public Health. On July 1, 2014, the Drinking Water Program was transferred to the State Board.

The tables on the following pages show the measured amounts of contaminants detected in 2014 or in the most recent year sampling was required. Water is sampled in EBMUD's source waters, at water treatment plants, in the distribution system or at customers' taps.

Although EBMUD tests for more than 100 substances, this report only lists those detected at or above the state or federal level required for reporting. In this case, no news is good news!

Table 1 – Regulated for public health

These contaminants are regulated to protect your health. They have maximum contaminant levels, known as primary MCLs, set by the State Board or U.S. Environmental Protection Agency. These levels are set as close to the established public health goals as is economically and technologically feasible.

Table 2 – Regulated for drinking water aesthetics

These contaminants are regulated to maintain aesthetic standards to maintain the odor, taste and appearance of drinking water. They have maximum contaminant levels, also known as secondary MCLs, set by the State Board.

Table 3 – Unregulated with no established maximum contaminant level

Water agencies are required to report these contaminants if detected, but no maximum contaminant levels have been established by the State Board or U.S. Environmental Protection Agency.

Table 4 – Other parameters of interest to customers

These water measurements, such as pH, hardness and alkalinity, may be of interest to customers.

ARE YOU READY FOR A WATER EMERGENCY?

Natural disasters or other emergencies can temporarily cut off the East Bay's water supply or affect water quality. Be prepared with your own supplies until water is restored. This will be your water supply while emergency management agencies set up temporary water distribution in your community.

You need one to two gallons per day per person for at least 3-7 days. Store extra water for pets and frequent visitors. Store water in clean, airtight, food-grade plastic containers and keep in a dark, cool place.

In case of a water quality emergency, be prepared to disinfect your tap water. In your emergency kit include a heat source, such as a camping stove, plus a clean pot to boil water for two minutes before consuming. If power supplies are disrupted or boiling water is not possible, disinfect your water with 1/4 teaspoon (16 drops) of liquid bleach per gallon of water and then let stand for 30 minutes. Add measuring spoons, a clean medicine dropper and a sealed bottle of regular, unscented liquid bleach to your emergency supplies.

HOW TO READ THE WATER QUALITY TABLE

Find your location on the map on page 2. Note which water treatment plant(s) serve that area.

- Go to the table on page 4 to find the contaminant you are interested in.
- Column two notes the unit of measurement.
- Column three lists the most recent year the contaminant was tested.
- Column four lists the state or federal goal. At that amount or lower, there is no known or expected risk to health from its presence in drinking water. Not all listed contaminants have goals set by the California or US Environmental Protection Agency.
- Column five notes the highest amount the State Board or U.S. Environmental Protection Agency allows. This amount is usually not as low as the public health goal in column four.
- Column six lists the average amount detected across the EBMUD service area or at designated locations.
- Find the column that corresponds to the water treatment plant(s) that serve you. This is the amount of the contaminant detected in your area's water. All reported contaminants were detected at amounts lower than the highest amount allowed (column 5) by the State Board and U.S. Environmental Protection Agency.
- The last column lists how the contaminant typically gets into your drinking water.

EBMUD 2014 ANNUAL WATER QUALITY REPORT

In 2014, your drinking water was consistently the highest quality, surpassing every public health requirement set by the State Water Resources Control Board (State Board), Division of Drinking Water and the U.S. Environmental Protection Agency.

KEY TERMS

- AL** Regulatory action level. The concentration which, if exceeded, triggers treatment or other requirements that a water system must follow.
- DBP** Disinfection by-products. These are formed when chlorine and/or ozone reacts with natural constituents in water. Trihalomethanes (THMs), haloacetic acids (HAAs), chlorate, and bromate are disinfection by-products.
- MCL** Maximum contaminant level. The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs or MCLGs as is economically and technologically feasible. Secondary MCLs address odor, taste and appearance of drinking water.
- MCLG** Maximum contaminant level goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.
- MRDL** Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial pathogens.
- MRDLG** Maximum residual disinfectant level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial pathogens.
- Notification level** A health-based advisory level established by the State Board for chemicals in drinking water that lack MCLs.
- Primary drinking water standard** These standards regulate contaminants that affect health by setting MCLs and MRDLs along with their monitoring, reporting and water treatment requirements.
- PHG** Public health goal. The level of a contaminant in drinking water below which there is no known or expected risk to health. Public health goals are set by the California Environmental Protection Agency.
- TOC** Total organic carbon. A measure of organic compounds that are present in the water.
- Turbidity** A measure of the cloudiness of water. Turbidity is monitored because it is a good indication of the effectiveness of our filtration systems.
- TT** Treatment technique. A required process intended to reduce the level of a contaminant in drinking water.
- 90th percentile** A measure that indicates 90 percent of the samples had a lower result.

ABBREVIATIONS

- gpg** grains per gallon
- NA** not applicable
- NL** notification level
- NTU** nephelometric turbidity unit, a measure of the cloudiness of water.
- pCi/L** picocuries per liter, a measure of radioactivity.
- ppm** parts per million. One ppm is like 32 seconds in one year.
- ppb** parts per billion. One ppb is like 3 seconds in 100 years.
- ppt** parts per trillion. One ppt is like 3 seconds in 100,000 years.
- TON** threshold odor number, a measure of odor in water.
- µS/cm** microsiemens per centimeter, a measure of electrical conductance.

NOTES

- a)** Chloramine residuals in the distribution system are measured as an equivalent quantity of chlorine. When the chloramine residual cannot be detected, the sample is further analyzed to ensure that microbiological water quality is in compliance with the regulations. **b)** Highest running annual average. **c)** EBMUD is required by state law to add fluoride to drinking water to help prevent dental decay in consumers. Current regulations require that fluoride levels in the treated water be maintained between 0.7 to 1.4 ppm with an optimum dose of 0.8 ppm. Our monitoring showed that the fluoride levels in the treated water distribution system ranged from 0.05 to 1.0 ppm with an average of 0.8 ppm. Information about fluoridation, oral health and current issues is available at www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.shtml. **d)** See page 7 for additional information about lead and chromium in drinking water. **e)** Highest locational running annual average. **f)** Sampling locations are chosen to represent worst-case scenarios. **g)** All hexavalent chromium samples are in compliance with the new California MCL of 10 ppb. **h)** Sobrante water treatment plant was not in service when *Cryptosporidium* was detected.

* Grains per gallon (gpg) is a measure of water hardness. Knowing the amount can help improve the function of dishwashers, cooling equipment and other industrial processes. Refer to your appliance manufacturer's instruction manual for the optimum grains per gallon level.

WATER QUALITY REGULATIONS

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

Microbial contaminants, such as viruses, bacteria and protozoa, such as *Cryptosporidium*, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Synthetic organic contaminants, such as pesticides and herbicides that may come from a variety of sources, including agriculture, urban storm water and residential uses.

Volatile organic chemical contaminants from industrial processes and petroleum production, and from gas stations, urban storm water runoff, agricultural application and septic systems.

Radioactive contaminants that can be naturally occurring or be the result of oil and gas production and mining activities.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants

and potential health effects is available from the U.S. Environmental Protection Agency's Safe Drinking Water Hotline at 800-426-4791 or online at www.epa.gov/safewater. Contact your healthcare provider or visit the Centers for Disease Control and Prevention website for guidelines on using tap water for health or medical purposes.

Cryptosporidium

Cryptosporidium is a microbial contaminant found in surface water throughout the United States. Although filtration is highly effective in removing *Cryptosporidium*, the most commonly used filtration methods cannot guarantee 100 percent removal.

Our monitoring indicates the presence of these organisms in one of our source waters. Current test methods cannot determine if the organisms are dead or are capable of causing disease. Ingestion of *Cryptosporidium* may cause abdominal infection with symptoms including nausea, diarrhea and abdominal cramps.

Cryptosporidium must be ingested to cause disease, and it may be spread through means other than drinking water. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people, infants and small children, and the elderly are at greater risk of developing life-threatening illness. We encourage these individuals to consult their physician regarding appropriate precautions to take to avoid infection.

Populations with low resistance

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, and some elderly and some infants can be particularly at risk to infections.

These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the USEPA Safe Drinking Water Hotline at 800-426-4791 or www.epa.gov/safewater.

REPORT A WATER QUALITY CONCERN

Do you have a question or concern about your water quality? If so call 866-403-2683. EBMUD inspectors respond to calls within one day regarding water which appears dirty, colored, or has foreign particles or unusual taste or odor.

Lead in drinking water

If present, elevated levels of lead can cause serious health problems. Pregnant women, infants and young children are typically more vulnerable to lead in drinking water than the general population.

Lead in drinking water is primarily from materials and components associated with lead service lines and home plumbing. EBMUD has replaced all lead water lines in its service area, but you may have lead in your home plumbing. It is possible that lead levels at your home may be higher than at other homes in the community as a result of materials used in your home's plumbing.

If you are concerned about elevated lead levels in your home's water, you may wish to have your water tested. If your water has been sitting for several hours, you can minimize the potential for lead exposure by running your faucet for 30 seconds to 2 minutes before using water for drinking or cooking. Capture and reuse this water for other uses such as watering ornamental plants.

Information on lead in drinking water, testing methods and steps you can take to minimize exposure is available from the U.S. Environmental Protection Agency Safe Drinking Water Hotline at 800-426-4791 or online at www.epa.gov/safewater/lead.

Fluoride and infant formula

Water fluoridation is a widely accepted practice and mandated by state law. It is proven to be safe and effective for preventing and controlling tooth decay. According to the American Dental Association and Centers for Disease Control and Prevention (CDC), it is safe to use optimally fluoridated water for preparing infant formula. If an infant is primarily fed infant formula prepared with fluoridated water, there may be an increased chance for mild enamel fluorosis, but enamel fluorosis does not affect the health of the infant or the health of the infant's teeth. To lessen this chance, deionized, purified, distilled or demineralized bottled water can be used some of the time to prepare infant formula.

If you have additional questions about fluoride, contact your health provider. Additional information can be found at the State Board www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/Fluoridation.shtml or the CDC www.cdc.gov/fluoridation websites.

Chromium

Chromium is found naturally in the environment, in two forms: trivalent and hexavalent chromium. Both forms of chromium find their way into bodies of water through mineral deposits. Hexavalent chromium is also a byproduct of industrial manufacturing. Trivalent chromium is an essential human dietary element. When ingested, hexavalent chromium is a suspected carcinogen.

Currently, trivalent and hexavalent chromium are regulated together by the federal and state agencies. As of July 1, 2014, there is also a California maximum contaminant level (MCL) for hexavalent chromium of 10 parts per billion. EBMUD monitors for total chromium at our five treatment plants. Beginning in October 2013, EBMUD began collecting samples for hexavalent chromium. EBMUD is in compliance with the California MCL and will continue to meet all regulatory requirements.

GENERALIZED GEOLOGIC
MAP OF CALIFORNIA

Geologic maps show the distribution of rocks exposed at the surface of the earth as well as other geologic information. Rocks are grouped according to age and origin on the map. Age of the rocks is considered to be the geologic time at which the rock formed (see Geologic Time Scale on back page). Rocks are classified according to their origin:

1) sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental); 2) igneous rocks form by crystallization of minerals from molten rock. Molten rock beneath the earth's surface is called magma. Magma cools slowly to form coarse-grained igneous rocks such as granite. Molten rock erupted on the earth's surface from volcanoes is called lava and forms volcanic rocks; 3) metamorphic rocks form from preexisting rocks by mineralogical, chemical, and/or structural changes. Other geologic information shown on geologic maps includes structural features such as faults. Faults are fractures in the earth's crust where rocks have moved relative to each other.

The map shown here is generalized from more detailed, larger scale maps. On this map, rocks exposed in California are placed in one of seven units:

Quaternary sedimentary rocks. Gravel, sand, silt, and clay deposited mostly in valleys and lowlands onshore. There are some marine sedimentary rocks of this age in California.

Tertiary sedimentary rocks. Sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin. These rocks are exposed mostly in the coastal regions of California.

Tertiary and Quaternary volcanic rocks. Lava flows erupted from volcanoes. These rocks make up much of the Cascade Range and the Modoc Plateau, and are widespread in eastern California. They also occur in coastal regions.

Mesozoic sedimentary rocks. Sandstone and shale that were deposited mostly in the ocean. The rocks make up the bulk of the Coast Ranges. They also occur in coastal southern California.

Mesozoic granitic rocks. A wide variety of coarse-grained igneous rocks formed when magma that intruded the earth's crust cooled and was later exposed by erosion. Granitic rocks occur throughout the state, but are most common in the mountainous areas such as the Klamath Mountains, the Sierra Nevada, and the Peninsular Ranges. Some granitic rocks are Cenozoic, Paleozoic, and Precambrian.

Mesozoic and Paleozoic metamorphic rocks. Metasedimentary and metavolcanic rocks that make up much of the Klamath Mountains and the Sierran foothills. They are also common in the Basin and Range, the Mojave Desert, the Transverse Ranges, and the Peninsular Ranges.

Serpentinized ultramafic rocks. A special type of rock that does not fit into the three common categories of rocks. The most common rock is serpentine, the California state rock (see CGS Note 14).

September 16, 2019

Mr. David Fields
Executive Vice President
Sunset Development Company
2600 Camino Ramon, Suite 201
San Ramon, CA 94583

Subject: Subsurface Investigation
Bishop Ranch 3A, San Ramon, California
ATC Project Number: 118EM01202

Dear Mr. Fields:

ATC Group Services LLC (ATC) has prepared this report to document field activities and findings for the Subsurface Investigation for the above-referenced property for Sunset Development Company (herein referred to as the Client). This work was completed in accordance with our proposal (ATC Proposal 118-2019-0056).

1.0 SITE DESCRIPTION

The property consists of approximately 10.66 acres of primarily undeveloped land (Figures 1 and 2). A former contractor staging area is located on the northeast corner of the property. The property is located in an area that is primarily characterized by commercial development, undeveloped land, and a community center.

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Map Series, Diablo, California, Quadrangle Topographic Map, 2012, the property is located approximately 443 feet above mean sea level (MSL) and has a sloping topography towards the southeast (Figure 1). The nearest water body is the South San Ramon Creek which is located approximately 800 feet to the northeast of the property.

Based on the California Department of Conservation, California Geological Survey, Generalized Geologic Map of California Note 17, dated April 2002, the property is primarily underlain by Tertiary sedimentary rocks. Sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental). Tertiary sedimentary rocks include sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin.

According to information from a nearby environmental case located at 1090 Market Place and located approximately 450 feet to the east of the property, groundwater occurs between 6 and 14 feet below ground surface (bgs).

2.0 BACKGROUND

According to a Phase I Environmental Site Assessment (Phase I ESA) by ATC dated January 18, 2019, the property was historically utilized for agricultural purposes. Based on the historical agricultural usage of the property, pesticides and/or herbicides may have been utilized on the property and near-surface soils may have at one time contained these compounds; however, evidence of large scale pesticides and/or herbicides use, storage or mixing was not observed during review of historical sources.

ATC recommended that, if future development activities include soil disturbance such as grading or excavation, soil should be characterized for hazardous substances including herbicides/pesticides and petroleum hydrocarbons to address potential impact from prior agricultural use and temporary construction staging activities (minor spills of oily material). Any identified impacted soil removed from the property should be transported and disposed in accordance with applicable regulations. The preparation of a soil management plan, prior to soil disturbance such as grading or excavation, may be warranted.

ATC mobilized to the site on January 7, 2015 and collected shallow soil samples from twelve locations (B-1 through B-12) across the site as detailed in the Limited Phase II Environmental Assessment Report dated January 19, 2015. Borings B-1 through B-8 were advanced within or just outside of the fenced construction area and borings B-9 through B-12 were advanced within the remainder of the property. Based on results of the soil assessment, the only exceedance of the Environmental Screening Levels (ESLs) was for arsenic and total petroleum hydrocarbons in the motor oil range. Arsenic concentrations are not significantly above the ESL and the concentrations detected are consistent with background concentrations in the San Ramon area (Smith et. al., 2014). Additionally, Endosulfan II and Lindane were not reported above MDLs for one sample, but the MDLs exceeded the corresponding leaching to groundwater ESLs.

3.0 SCOPE OF WORK

ATC understands that the removal of approximately 5 feet of soil across the property is planned and that the Client has requested an investigation to better understand the locations and depths of the impacts to soil on the property. The scope of work below is designed as an initial investigation to provide the information requested. This work was performed under the oversight of a licensed professional geologist.

3.1 Pre-Field Activities

Prior to initiating field activities, ATC prepared a site specific Health and Safety Plan (HASP) for the site. The HASP complied with Title 29 of the Code of Federal Regulations (CFR) Section 1920.120(j), the California General Industry Safety Order (GISO) and Title 8, California Code of Regulations (CCR) Section 5192. A copy of the HASP was on-site during all field activities.

Drilling permits were obtained from Contra Costa County Environmental Health Department (CCCEHD) for this investigation (Attachment A).

The public underground utility locating service USA North was notified to identify public utilities in the work area. Private utility locating was conducted by GPRS of San Francisco, CA to identify underground utilities on the property.

3.2 Drilling and Soil Sampling Activities

On July 15 and 16, 2019, seventeen (17) soil borings were advanced on the property (Figure 2). The borings were advanced by Cascade Drilling of Richmond, California. The borings were advanced in a grid pattern with nine (9) of the borings (A-1 through A-9) advanced in the former contractor staging area which is an area of previous hydrocarbon impacts. Eight (8) of the borings (B-1 through B-8) advanced on the rest of the property. The borings were advanced using a hand-auger to a depth of 5 feet bgs.

Soil samples were collected at depths of 1, 3, and 5 feet bgs. The soil samples from 1 and 3 feet bgs were submitted for analysis and the samples from 5 feet bgs were placed on hold in the laboratory.

The borings were advanced and samples were collected at select intervals. Down-hole equipment was decontaminated using a triple rinse system containing detergent.

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples and the PID readings for each sample were included on the boring logs (Attachment B). Selected soil samples were collected into laboratory-supplied containers.

Following completion of sample collection and removal of tooling, the borings were backfilled with neat cement grout as required by the CCCEHD and completed at the surface to match the surrounding conditions. Investigation derived waste was left onsite in a drum. Site photographs are provided in Attachment C.

3.3 Laboratory Analysis

The soil samples were labeled and placed into a cooler with ice following sampling. All samples were transferred under appropriate chain-of-custody documentation to McCampbell Analytical, Inc. of Pittsburg, California. Laboratory analytical documentation is provided in Attachment D.

Laboratory analysis of the soil samples consisted of the following:

- TPH multi-range by EPA Method 8015
- Volatile Organic Compounds (VOCs) by EPA Method 8260
- Organochlorine Pesticides (OCPs) by EPA Method 8081A
- CAM 17 Metals by EPA Methods

4.0 RESULTS AND CONCLUSIONS

4.1 Geology and Hydrogeology

Sediment encountered in each of the borings generally consisted of silty clay with the appearance of layers of well-graded gravel and/or silt in the borings to 5 feet bgs, the maximum depth explored. Groundwater was not encountered in any of the borings.

4.2 Screening Levels

The analytical results were compared to the Regional Water Quality Control Board (RWQCB) Tier 1 Environmental Screening Levels (ESLs), San Francisco Bay Regional Water Quality Control Board, dated 2019 (Revision 2). Tier 1 ESLs reflect the lowest concentration that would not result in adverse impacts to human health under a residential land use scenario, ecological terrestrial exposures, and leaching to groundwater or surface water. The Tier 1 ESLs are considered to be conservative and under most circumstances, and within the limitations described in the ESL guidance document. The presence of a chemical at concentrations below the corresponding ESL can generally be assumed to not pose a significant threat to human health or the environment. Additional evaluation may be warranted where the chemical concentration exceeds the corresponding ESL or exceeds background concentrations for naturally-occurring elements (e.g., arsenic).

The results also include a comparison to the residential soil ESLs which are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

The results for the CAM 17 Metals analysis in soil were also compared to the hazardous waste criteria levels for California. The comparison includes the levels at which the analysis of samples for Soluble Threshold Limit Concentration (STLC) and Toxicity Characteristic Leaching Procedure (TCLP) may be run as part of the determination.

4.3 Soil Analytical Results

Petroleum Hydrocarbons

Petroleum hydrocarbons within the diesel and oil ranges were detected in shallow soil samples obtained at various locations across the property. The origin of the surficial petroleum hydrocarbons is not known, but could be related to historical site use and/or tenant operations. While the presence of petroleum hydrocarbons in shallow soil would not result in the generation of hazardous waste, the presence of petroleum hydrocarbons could influence the disposal options for excess soil generated during future site grading or development activities.

The results of this assessment identified the presence of TPH as diesel and motor oil at concentrations in excess of the Tier 1 ESLs at depths of approximately 1 foot below grade within the grids containing borings A-5, A-8, B-3, B-4, and B-7. Neither TPH as diesel nor TPH as motor oil were detected at concentrations in excess of the Tier 1 ESL in any samples collected at depths of approximately 3 feet below grade. Given the nature of these occurrences, it is reasonable to conclude that TPH impacted soil is limited to the upper 3 feet of soil. Since the proposed rough grade would extend to a depth of approximately 5 feet below grade, the grading plane would encompass all soil containing TPH at concentrations in excess of Tier 1 ESLs.

Organochlorine Pesticides

Residual OCPs including DDT, DDE, and DDE; dieldrin; chlordane; and endosulfan were detected in soil samples analyzed during this investigation. The presence of these pesticides in shallow soil is consistent with the historical use of certain pesticides that may have been applied to the property. Of the OCPs detected, DDT and its related congeners DDD and DDE were detected in soil with the greatest frequency. The concentrations of OCPs detected in soil are below levels that would represent a significant threat to human health under a residential land use scenario.

The concentration of DDE detected in soil sample B-6 at 3 feet (1.5 mg/kg) exceeds the California TLC limit of 1.0 mg/kg. Soil removed from this location and intended for offsite disposal would be considered a California (non-RCRA) hazardous waste. Given that the vertical extent of OCPs at this location was not fully defined, ATC recommends additional vertical and lateral definition in this area to more definitively define the limits of soil that may warrant management and disposal as hazardous waste. Once the extent of DDE impacted soil in the vicinity of boring B-6 is defined, this soil should be removed and disposed of in accordance with applicable standards.

Metals

The concentrations of metals detected in soil samples collected during this investigation were observed to be consistent with background concentrations of these naturally-occurring elements. Arsenic and vanadium were detected in all soil samples collected at concentrations in excess of the Tier 1 ESLs and arsenic was detected in all soil samples at concentrations in excess of the health-based ESL for residential land use. Given that the concentrations of arsenic and other metals are consistent with background levels for these metals in California soils, it does not appear that soil removed during future site grading or development would require consideration of special soil management or disposal alternatives. However, additional soil sampling and analysis would likely be required before soil is transported offsite.

Soil Reuse and Disposal

It is ATC's opinion that excess soil generated during site grading would not be suitable for unrestricted use at other locations and should be disposed at a licensed municipal solid waste or inert landfill. Additional soil sampling and analysis may be required before excess soil is relinquished for disposal at an offsite location. The number of soil samples and the laboratory analytical requirements may vary by disposal facility. ATC is available to support efforts related to the identification of suitable disposal facilities and

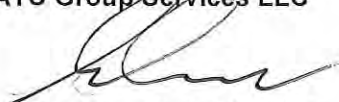

complete any additional sampling and analysis required by the landfill as part of its waste acceptance criteria.

5.0 LIMITATIONS AND RELIANCE

This report was prepared in accordance with the scope of work outlined in ATC's contract and with generally accepted professional engineering and environmental consulting practices existing at the time this report was prepared and applicable to the location of the site. It was prepared for the exclusive use of the Client for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to ATC. To the extent this report is based on information provided to ATC by third parties, ATC may have made efforts to verify this third party information, but ATC cannot guarantee the completeness or accuracy of this third party information. The opinions expressed and data collected are based on the conditions of the site existing at the time of the field investigation. No other warranties, expressed or implied are made by ATC.

ATC appreciates the opportunity to assist you on this project. If you have any questions or require additional information, please contact Bryan Campbell at 925-804-2858.

Respectfully submitted,
ATC Group Services LLC

Notes:

Chemicals included in the summary results reflect all constituents that were detected in at least one sample at a concentration in excess of the laboratory method detection limit.

- mg/kg Milligrams per Kilogram
- bgs Below Ground Surface
- ND Not Detected at laboratory method detection limits stated in official laboratory analytical report
- <1.0 Constituent not detected at a concentration in excess of the laboratory method detection limit
- J "J" Flagged value. Represents an estimated concentration between the laboratory method detection limit and the laboratory reporting limit.
- TPH Total Petroleum Hydrocarbons
- VOCs Volatile Organic Compounds
- OC Organochlorine

- TTLC California Total Threshold Limit Concentration - State hazardous waste criterion
- STLC California Soluble Threshold Limit Concentration - State hazardous waste criterion
- TCLP Federal Toxicity Characteristic Leaching Procedure - Federal hazardous waste criterion
- Red Result Exceeds "Run STLC if Above" Level

ESLs: Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, Tier 1 ESL, 2019 (Revision 2).

^[1] - Tier 1 ESLs for soil reflect the lower of values that are protective of human health under a residential land use scenario, ecological terrestrial habitats, and leaching to groundwater and surface water. These values are intended to be protective of human health, potential ecological exposures, groundwater, and surface water resources under any land use scenario

^[2] - Residential soil ESLs are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

ESLs for cis- and trans-chlordane are based on the values for chlordane. ESLs for Endosulfan I, Endosulfan II, and Endosulfan Sulfate based on values for Endosulfan.

- 300** Represents a detected concentration in excess of Tier 1 ESL, but equal to or less than the chemical-specific Residential Health-Based ESL
- 300** Represents a detected concentration in excess of the chemical-specific Tier 1 ESL and Residential Health-Based ESL

Table 2
Summary of Soil Analytical Results - Metals
Bishop Ranch 3A, San Ramon, CA 94583

Notes:

mg/kg Milligrams per Kilogram
bgs Below Ground Surface
ND Not Detected at laboratory method detection limits stated in official laboratory analytical report
<1.0 Constituent not detected at a concentration in excess of the laboratory method detection limit
J "J" Flagged value. Represents an estimated concentration between the laboratory method detection limit and the laboratory reporting limit.

TTLC California Total Threshold Limit Concentration - State hazardous waste criterion
STLC California Soluble Threshold Limit Concentration - State hazardous waste criterion
TCLP Federal Toxicity Characteristic Leaching Procedure - Federal hazardous waste criterion
Red Result Exceeds "Run STLC if Above" Level

ESLs: Environmental Screening Levels, San Francisco Bay Regional Water Quality Control Board, Tier 1 ESL, 2019 (Revision 2).

^[1] - Tier 1 ESLs for soil reflect the lower of values that are protective of human health under a residential land use scenario, ecological terrestrial habitats, and leaching to groundwater and surface water. These values are intended to be protective of human health, potential ecological exposures, groundwater, and surface water resources under any land use scenario

^[2] - Residential soil ESLs are human health-based screening levels for Residential Land Use. These values are intended to be protective of potential human exposures to shallow soil under a residential land use scenario and do not consider potential ecological exposures, leaching to groundwater, or migration to surface water.

300 Represents a detected concentration in excess of Tier 1 ESL, but equal to or less than the chemical-specific Residential Health-Based ESL and background levels for naturally-occurring elements
300 Represents a detected concentration in excess of the chemical-specific Tier 1 ESL and Residential Health-Based ESL

Arsenic occurs naturally in California soils at concentrations in excess of the Tier 1 ESA and health-based Residential ESLs. Therefore, soil data are typically compared to background concentrations for naturally-occurring elements. Background concentrations of arsenic in the San Ramon Area generally range from approximately 6 to 7 mg/kg (Smith, D.B., Cannon, W.F., Woodruff, L.G., Solano, Federico, and Ellefsen, K.J., 2014, Geochemical and mineralogical maps for soils of the conterminous United States: U.S. Geological Survey Open-File Report 2014-1082, 386 p., <https://dx.doi.org/10.3133/ofr20141082>).

Soil Boring Permit

Permit Number: 0026074 PE Number: 4301
Date Received: July 03, 2019 WP Number: WP0026074

Issued By: KAREEM MOHSEN Date Issued: 11-Jul-2019 Date Expires: 12-Jan-2020

| | |
|---------------------------|-------------------------------------|
| Intended Use: SOIL BORING | # of Borings or Well ID: 17 BORINGS |
|---------------------------|-------------------------------------|

The issuance of this permit by Contra Costa County Environmental Health Division does not guarantee a satisfactory and an indefinite operation of any well. Permit expires in 180 calendar days from date of approval. Permits are non-transferable, and can be suspended or revoked. If more time is required for the project, a time extension may be granted if reasons warrant it in writing.

Project Site Information

Site Address: CAMINO RAMON (6200 BOLLINGER CANYON RD.), SAN RAMON

Prior to any drilling construction or destruction of a well, requests for inspection appointment must be received 48 hours in advance (excluding weekends, holidays, and Mandatory County Furlough Days) by faxing your written request to (925) 692-2502 or e-mail to ehlu@cchealth.org. Voice mail messages are not acceptable.

Well drillers must possess a valid C-57 license and must have on file a performance bond of \$5,000.00 with Contra Costa County before commencing with any well construction, destruction or repairs.

Soil Boring Permit Conditions:

1. Soil Boring shall be destroyed pursuant to County regulations within 30 days of completing monitoring activities.
2. _____
3. _____

Final Approval by: _____ Date: _____
